YES.... and no. There are a few out there that transmit over ALOT of freqs, ie: somewhere between dc & daylight. Problem is, they're built for the gov. and are *quite* pricy. I know of the whereabouts of several of them in the possesion of a few of the hams I am aquainted with, but I think you need to work on *interacting* with others abit before you are given privied info that would put a piece of gear in your hands that would eneble you to come into contact with that many ppl at once, who would have no choice than to hide from you... as opposed to here where they can just ignore you.

1760. 46 and 900 MHz Cordless Scanning Guide Now OnLine

Newsgroup: rec.radio.scanner
Date: 1999-05-18 00:00:00 UTC
From: av8tor@flash.net
Message-ID: <ko203.724$Wu1.1407@news.flash.net>
Source record: 118387

Hi All:
As many of you know I've been trying to put together an OnLine Radio E-Zine (electronic magazine). I've been adding and adding every chance I get.

Today I added a frequency chart for 900 MHz cordless phones. Also I added a short artical with tips for scanning the 46 MHz cordless phones. Included is a chart of all the older and new 46 MHz frequencies.

Have fun and enjoy.
George

at least it keeps the cb'ers off the hf ham bands, and wish the
truck drivers would get off the 2 meter band, that's where the
fcc made a mistake, with the nocode ticket.

1767. WTT: 9000XLT

Newsgroup: rec.radio.scanner
Date: 1999-05-18 00:00:00 UTC
From: jtward01@aol.com.nospam
Message-ID: <19990517214538.25672.00001801@ng-fc1.aol.com>
Source record: 118394

Will trade a Uniden 9000XLT with box, antenna and AC adapter for a RadioShack Pro-2045 in excellent condition. While these radios are very much alike in coverage and features, the Pro-2045 is a bit smaller and will fit under the dash of my car and the 9000XLT will not. I realize there are plenty of other, smaller radios, but few or none that cover the 225-400 military airband. In fact, the only mobile I know of with milair is the ICOM R-100, and I don't have $600 to spend right now. Handhelds are less than satisfactory.

No that is a little draw back, if you lock-out channel 1 on 0ne of the
banks they all get it,same with delay.

Well i take some of that back ,delay is not affected however lock-out
is,also i believe that programed search banks my also be affected.

I think I have an event that tops them all. Decades ago, I had an acquaintance who worked at Arecibo receiving site. He hooked up his Heathkit twoer, when the opportunity presented itself, to one of the dish feeds and received his transmission echo bounced off the moon. That's about 400,000 miles plus, round trip. I believe the Heath Twoer ran about 5 or 10 watts.

My best advice is for you to wait until the Trunk Tracker with the
Ericcson capability comes out. From what I understand, it will scan
Motorola Trunked Systems, and Ericcsonn Systems too plus Conventional
Systems. Start making that Christmas wish list now boys & girls.

>is,also i believe that programed search banks my also be affected.
>

Howdy Craig-
I haven't had that happen yet, and I did the mod last week. Maybe someone did something goofy to my 760 before I ever used it (it definitely was well used before I got it) but at any rate, since there is a doubt as to the lock out function being independent of the old or new banks, perhaps Bob Horvath should not perform this mod until you are satisfied with what you may end up with.
I gave Bob info based on my 760 not having any "hold over" delay or lockout problems, and I sure don't want him to do the mod and find a different result, not to his liking.
Mike

The Electra BC IV uses the slide switches at each crystal location to orient that channel for L = Low Band, H = High Band, U = UHF and U/T = UHF " TV Band ", just another portion of UHF, an old term.

The Bearcat scanners all use the 10.8 IF cyrstals. Almost all other scanners use the 10.7 crystals often called the " Regency " type. They look exactly the same, but some are marked on the case as to which type they are.

There were quite a few other brands than Regency which used the 10.7 crystal including almost every Radio Shack crystal scanner.

Be careful if ordering them from RS as the clerk may not know the difference.

I have found great prices from G&G Communicatons in NY State,but can't recall their internet address.

The Electra BC IV was one of the finest crystal scanners around. It was typical of the quality produced by Electra in Indiana before Uniden came in and started pumping out the longest line of junk interrupted only several times by a few very good models.

John,

Yes, of course. There's the odd chance that your hobby device can
interfere with a crucial instrument at a critical moment. That's why
they ask you to turn off camcorders, and other portable electronic
devices during take off and landing. I comply with those requests
willingly.

I've never been denied boarding with them, however, and that is the
issue here. The argument that HT transceivers might be presented in
fight as detonation devices holds no water for me. I can just as easily
wave my car alarm control, and claim that it controls the fates of all
on board.

The original point was that these measures seem arbitrary and pointless.
I agree wholeheartedly.

Michael.

went on a business flight to
a city in USA recently.

took my MR8100 with wires and
speaker and also my antennae
with extended wire to hook into
it with high antennae about two
feet high.

put it into luggage and locked
it up and upon coming to the
check-in counter at the flight
center...told the supervisor
what I had and what it looks
like inside. you know,all those
wires. and bulky 8100 and etc.

she said, "thank you for your
candidness" and marked a few
comments and said, "enjoy your
flight"

same on way back: woman told me
"thanks for telling us and
enjoy your flight"...

bill conduit
etc.

This BC 100 comes on and freqs can be programmed in and it will scan them and they can be heard ok but the display is not working right. You can barely see the numbers. Cosmetically it's quite decent. All 16 channels scan but it loses the memory and puts in some odd freqs whenever unplugged. Rubber ducky ok, no box, no manual. $12 shipped. BHL philoxeny@hotmail.com

Ken... we re-implemented tac 1 Sunday night around 2300 hours... It's up again and functioning normally (Our SMOs or Systems Monitoring Operators <techs> finally took care of it) ... There was a problem with the frequency somewhere between our center and the Mount Lee transmitter sight that began Saturday morning ...operators in the CDC would only hear a loud buzz in their ears when they pulled up the freq during the time you heard nothing. In addition to using 484.712 which we call "Air/K-9" or channel 40, when tac 1 goes down we also will kick in tac 2 - 154.770. "Hotshots" and air unit requests were made on that frequency as well during the time tac 1 was down. Hope that answers your question.

maybe it should be on the "X-Files".... 73 de Jordan...

1805. Electra Tiger Scan Model TSA

Newsgroup: rec.radio.scanner
Date: 1999-05-18 00:00:00 UTC
From: Harry Marnell <marnells@snowcrest.net>
Message-ID: <7hs16uqvi1@mail.snowcrest.net>
Source record: 118432
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur,alt.radio.amateur

A gentleman at Electra faxed me a spec sheet and instruction page for the TSA.

In part:

On/off control: Manual push-button

Volume control: Manual push-button. Push and hold to set desired level (in 64 steps). Toggles between volume up and volume down

Channel selection: Manual push button. CH button cyclically selects Weather, Channel One, Channel Two, and Scan Ch 1 & 2.

Audio: up to 1/2 watt thru 32 ohm speaker, or 8 ohm ext spkr jack

Warranty: 1 year parts & labor

Programming: Press/release CHAN button to get to desired channel.

And (paraphrasing it): Press CHAN button number of times to correspond to freq digits.
E.g. : For 154.205, press it ONCE for 1, then FIVE TIMES for 5, FOUR TIMES for 4, TWICE for 2...etc.

NiCD batt/charger and Carry case are $19.95 each.

The fellow told me they sold out the entire stock at Dayton, but have all parts in stock and will be assembling more radios this week.

Harry
If anyone wants more spec info, email me...(I DON'T have a unit yet...anyone out there get one?)

Hi, the title said it all. Can anyone point me to the information needed to modify this 6 meter radio for Out-of-band use.

No want-to-be lawyers please, you have no idea where, or for what I will use this radio. So don't try and tell me that the information I want is in any way Illegal. Thanks, Bill

That's quite a list. They are all printed in the Southwest Frequency Directory, Arizona Region. It is a 300+ page frequency and scanner information book just for Arizona. Includes public safety, business, federal government, aircraft, etc. Besides frequencies, it also has information like radio codes, terminology, fire station resources, response assignments, unit designators, station locations, and more. Put together by local scanner "experts".

See http://www.azstarnet.com/~danr for more info.

sounds like electromagnetic pulse

>Has anyone ever had anything like this happen?

US embassy in Moscow circa 1970?

> Is there any way to confirm that there is a high
>frequency sound is being projected? Will an oscilloscope work?

Connected to ultrasonic transducers. At power levels your talking
about, should be easy to detect. EM assaults (IIRC) are pulsed
microwaves 300 - 2400 MHz, at ultrasonic rep rates, and modulated at
13Hz alpha brainwave frequencies. Antenna and diode detector should
pick that up. But it sounds like your dealing with ultra & infra
sound.

Please be considerate of your neighbors if you retaliate with chemical
,biologic, or radioisotope weapons :-)

1813. WTT: PRO-2035 For Ten-Tec 253 Tuner

Newsgroup: rec.radio.scanner
Date: 1999-05-18 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <ayi03.29$kn1.1013@iad-read.news.verio.net>
Source record: 118440

Hello. I'm interested in trading a Radio Shack PRO-2035 base scanner for a Ten Tec 253 2KW auto-tuner. All I require is that the tuner works 100%, and is at least a 7/10 cosmetically. It also must include some type of power cord (preferably AC), and any other accessories (box, manual, etc) doesn't hurt either.

The scanner is at least a 9/10 cosmetically and it works 100%. It has very, very low use, and I've had no problems with it at all. It has 1000 memory channels, one touch weather, VFO knob, NFM/WFM/AM, RF ATT, RX from 25-520 and 760-1300 MHz (minus cellular), keypad, and data skip. This scanner can even be modified so that it can receive VHF/UHF in CW/SSB in addition to FM/AM if you have a SW Receiver, but I have not modified it for anything.

The scanner comes with the indoor telescopic antenna, AC power cord, base stand, original box, original packaging, and the original manual. Please let me know if you have a Ten-Tec 253 and are willing to trade for my scanner, or if you have any questions. Thanks a lot for reading.

The RS WX radio I had used a single crystal, and different trimmer capacitors were switched in and out while changing channels. I suggest you open the radio's case, look for one of the trimmers, and, with the channel selector selected for that trimmer, adjust it with a plastic tuning tool, until you hit that frequency.

The idea of a newsgroup is to share info and not to ipose censorship or ideals on what info an individual wishes to ask about or to share with likeminded people.

This self imposed censorship is I find arrogant, annoying, immature and very dangerous.

Really, there should be no requirement for Morse Code. Why they even
got rid of the 500 KILOCYCLE Morse Code Frequency for ships.

Well it also has to do with electronic interference. You wouldn't want
the plane to go down becasue you were busy with a QSO with somebody over
30 miles away thanks to the elevation that you were at, huh?

Well it would be okey dokey if he managed to jam the signal so that the
company that he works for cannot monitor how many rest stop/coffee
breaks he makes, but it would not be okay to jamm the whole system.I am
sure that he would not want the " MEN IN BLACK " in unmarked Crown Vics,
or Caprice Classics showing up @ the front door. Right?

Since it is illegal and it gives us all a bad reutation, why would you
want to do it? Why post the question on the Internet? You want some
unmarked sedan in your driveway?

If you can live without the PC interface (and most people can) I feel quite strongly that the MVT-9000, especially the Bandercom modified version is the better unit. More sensitivity, better build quality and better bandscope as well. I owned a 8200 and sold it for it's poor sensitivity. I now use a IC-R2 for handheld and an Optocom for base use.

I must agree that due to intl. treaty users on the hf bands are required to and should know cw. however I dispute the use of a speed test in that particular language for upgrade or access to spectrum. 5wpm satisfies the intl. treaty, we should be testing on tech. knowledge or added knowledge of the rules and regs, for upgrade purpose. It used to be that you needed to know hand signals for your drivers test. I believe they dropped that requirement in my state, but even if it was still in place, should we test how fast one can give them to upgrade our drivers license, or how fast we can recognize various shapes and colors of road signs. No of course not and speed should not be an issue in amatuer radio cw. Only a working knowledge of the code is needed and that is what should be mandated. If an individual wants to use cw to a large extent and increases their speed, so be it, but for others that use fm ssb etc. basic working knowledge is all that is necessary and all that should be required.

I think you're referring to the
optelectronics "Optotrakker"
which in combo with the OS456/
Pro2006/Discriminator Out Mod/
and the included Trakkstar Software....
or upgrade to ScanStar Deluxe and
you have the ability to scan all
types of trunking systems and
non trunking systems at the same
time!!! This combo is a hair slicker than
an OptoCom alone.

Actually it's often hundreds of miles using a two meter handheld in my Baron.
I've never seen any interaction with flight or navigation instruments at all.
However, if I were carrying unknowns as passengers, they turn it off!

Well said.
I'm thinking of one area where I use Morse outside of ham radio: flying. Navigation aids identify in Morse, but a 5 WPM proficiency suffices. Good. I like your idea.

No, I'm saying that if you want the same license I have, pass comparable tests.
Is CW relevant? The Navy thinks not. It's still valid and satisfying.
I'm no 35 WPM Extra, just an Advanced. I took my last code test at the Dallas
FCC office in April of 1964, 13 WPM. The damn government already stole my First
Phone, I don't want it to redefine my ham license, too. Just create a new
ticket? Been done.
The service does need to evolve with technology, no one uses spark much.
I have no simple solution.

Hi Folks-
A friend gave me a Bearcat 300 scanner about a week ago because
it's display was dead. I'd like to use this as just a base scanner
for local activity, so I'd like to fix it. The receiver still
unsquelches
and puts out static through the speaker but I don't know if it
receives or not because I am not sure of the frequencies programmed in.
Anyone have any ideas? I'd really like to fix it.

I need a really really low power transmitter, the kind to radiate a tiny signal onto the AM or FM band, thus can be picked up from a few feet. Radio Shack sells one but does anyone here know of any others, please post some details such as URLs.

I honestly hope that some day in the future a real journalist will
listen to a conversation covered by the radio secrecy act or the ECPA
--and report on it anyway for its newsworthiness.

The we'll have a First Amendment battle on the order of the famous
"Pentagon Papers" scandal. It will go all the way to the supreme
court and finally this ridiculous provision can be struck down.

Until then, let's keep the idiots out of this...

Rich's site is a valuable resource which reflects his professionalism,
dedication to the hobby, knowledge, thoroughness, fairness, and willingness
to share without compensation. He's the type of guy that gives hobbyists a
good name.

I didn't see the alleged offending post, but frankly I don't see anything
wrong with politely directing posters of the same questions again and again
to just go have a look at the place with lots of answers. Frankly I've
never known Rich to be anything less than polite ... in fact, considering
some of the noise flowing through the net and this newsgroup, he's
probably closer to sainthood.

here's the DMN article. hope it don't break somebody's etiquette --

Radio Shack chain to add RCA to its product lines

Deal with Thomson SA will add RCA models, equipment demonstration

05/14/99

By Alan Goldstein / The Dallas Morning News

Radio Shack and Thomson SA of France, which markets its products largely under the RCA
brand, announced an alliance Thursday that the companies said may go a long way toward
explaining and demonstrating the latest entertainment products.
Customers in 7,000 Radio Shack stores nationwide will have an opportunity to "touch, learn and
experience firsthand the astonishing home entertainment capabilities" of digital television and other
technologies, said Guy Johnson, senior vice president at Thomson Consumer Electronics.
Under terms of the deal, which was expected, Radio Shack will expand its "store within a store"
concept to include RCA products. Radio Shack, which has long been known for plugs, connectors
and other accessories, in recent years has forged successful relationships similar to the Thomson
deal with Compaq Computer Corp. for personal computers and with Sprint Corp. for telephone
equipment and services. Each vendor has a separate area in the store to display its products
exclusively.
Radio Shack aims to be a convenience store for electronics products and a neighborhood source
for demystifying increasingly complex technologies. The chain estimates that 94 percent of
Americans live or work within five minutes of a Radio Shack outlet.
The Thomson agreement means Radio Shack, the core operating unit of Fort Worth-based Tandy
Corp., will phase out its longtime house brand, Optimus, in favor of RCA.
While offering a private label can mean higher profit margins and less price competition, consumers
are more brand conscious with electronic gear than they used to be, said David Goldstein, president
of Channel Marketing Corp., a Dallas-based research firm.
Moreover, he said, it will be easier to control inventory with someone else's

brand because Radio
Shack will not have to commit to a certain number of units built by a contract manufacturer.
For Thomson, which has agreed to pay to outfit the stores with a special merchandising area, the
arrangement will help expand its distribution dramatically beyond its existing retail relationships,
analysts said.
Radio Shack stores already sell RCA-brand satellite dishes and digital videodisc players. The
agreement will expand the product line to include televisions, camcorders, home theaters, audio
products and accessories.
At the announcement in New York, Leonard Roberts, chairman-elect, president and chief executive
of Tandy, said customers may see some of the larger products that would not easily fit in Radio
Shack outlets demonstrated on store computers.
Radio Shack is also planning to introduce a Web site for selling consumer electronics and
accessories later this year.
The RCA display areas are expected to debut early next year. The introduction will continue
through the end of 2000, the companies said.

Subject: For Sale or Trade: Motorola MaxTrac 900
Date: Saturday, May 15, 1999 5:37 PM

Hello All! As you may have seen from my previous post, I recently obtained a Motorola MaxTrac 900Mhz Radio. It is the high power model with 8 Systems and 7 Sub Fleets. It includes scan and phone patch buttons. The radio powers up and transmits great on its one conventional frequency (940.125). I have no use for this due to my upcoming GMRS repeater. I also have a Motorola MTX 900 on the same Conventional channel which works fine, but the two do not talk to each other. The MTX will not come with a battery. The MaxTrac is in excellent condition and includes a hand-mike and power cable but no mounting bracket. I would like to trade the MaxTrac for a comparable UHF Conventional Unit. I purchased the MaxTrac for $150 and two MTXs for $40 total. One does not work, but will be included for parts. If you have something to trade for the MTX, please offer. If you have a non UHF radio that you would consider trading, I might take it. Make me an offer! Thanks to all!

The OptoCom WILL do EDACS right now with E-Trax software by Joe Cardani.
E-Trax is available from a variety of sources, the easiest is from Grove
Enterprises.

1872. Errant telephone/voice traffic at 3.007 - 3.550 MHz

Newsgroup: rec.radio.scanner
Date: 1999-05-19 00:00:00 UTC
From: Jim <jvpoll@dallas.net>
Message-ID: <37437063.85E345BC@dallas.net>
Source record: 118246

I stumbled - quite by accident - on telephone traffic in the HF band ..

Notably in the range of : 3.007 - 3.060 MHz and 3.500 - 3.560 MHz.

Mostly cariers are heard - with occasional 'ringing' and voice traffic
heard ...

Tracking the sources down results in a pegged S-meter on the HF
receiver when parked in the street outside a residence ...

These sources can be heard almost a mile away ..

Driving into Dallas each day from from south of McKinney - different
signals
can be heard while traversing mobile through Allen, Plano, Richardson
and
into Dallas ...

What gives????

Hi Jim,

It's possible that you may be picking up one of the pre-1984 Cordless Phones which operated in 1.6 Mhz to 1.8 Mhz range. Some of the early Uniden and Cobra Cordless Phones generated some very strong harmonics which could be heard almost a mile away in the 3.2 Mhz - 3.6 Mhz band.

Trying to find the frequency for the
Chesapeake Bay Bridge-Tunnel police in
Virginia. I have all the other bridges
& tunnels, most at 453.850.

The Bay Bridge-Tunnel is 17 miles long,
so I suspect they may be using VHF.

Thanx in advance.

Nope - not the pre-'84 phones ... know that technology well.

They used NBFM on the 'downlink' 1.7 MHz side too - and this
seems to be - believe it or not - AM. I've not been close to a
clean one to tell if I was 'slope detecting' a wide FM carrier or
whether it was AM - so don't quote me ...

Never encountered this many 'carriers' showing up in the 75/80 Meter
band back then (same receiver) from that style phone either ...

This is something new - and for something that probably isn't
supposed to radiate - the range is incredible!

I cannot overemphasize how many of these 'things' are out there
either ...

There are literally DOZENS heard on my 25 mile drive into
downtown Dallas each morning ... DOZENS!!

Signed:

- A long time - "Skybird, Skybird do not answer - message follows ..."

Really: Try a little experiment for me then. Just stand at a gas station whilst somebody is refuelling and induce just a small spark! If you have never seen a gasoline vapor explosion and the resulting skin burns then maybe you'll think again. Any transmitter is dangerous under those conditions, and a cell phone is still a transceiver with operating keys. Then again you are justly entitled to your opinion as I am and I prefer to play along the lines of common sense and public safety. No doubt you are quite happy to smoke a cigarette whilst refuelling your car!

Well Phil have you ever seen the results of a gasoline vapor explosion?
No of course you have not! But I have. And the resultant skin burns are
not pretty to see. Any electronic device is capable of producing short
circuits and sparks. Activating cellphone keypads may or may not induce
an electrical connection, however small, but you can bet your bottom
dollar that if there was such a fault produced then you would be the
poor schmuck standing there pumping unleaded gas into your car! We here
in the UK do not have vapor vacuums fitted to the gas pumps, so the
whole area around a busy market gas station is full of gas fumes.
All I am considering is the personal safety of my family and myself, and
if you don't like it Phil you can go and stuff yourself!

Morse Code is a "turd in a punch bowl". It is the reason that ham radio
will die. It is really unfortunate.

I didn't hear any censorship, or imposition of ideals. in Rich's original post. I didn't hear him say that new scannists should not post questions to the newsgroup. I heard him point to his web site, which is chock-full or information on scanning, and is, in my opinion, a great place for a new scannist, or somene thinking about getting into scanning, to find out information about the hobby, about equipment, tricks of the trade etc.

Rich's web page is an invaluable resource to the old-timer and the newcomer alike. I reference it nearly every day to get the latest news updates. And Rich himself has been both very quick and very willing to reply to my infrequent e-mail questions. Certainly not arrogant or dangerous.

You might want to check out the web site before slamming it. I thinks it's both well-intentioned and very effective.

Peter's right.

People seem to keep loosing sight of the fact this is RADIO RECEPTION!

Cell Phones aren't TOTALLY wireless, just wireless to the end user.
They still go through a network, and with the right software it doesn't
MATTER what the tower uses to talk to the end user.

But when the 'authorities' want to listen at an 'account', they have to
go through channels and have the right paperwork, ie warrant.

Gee, you mean like if you search the 360-400MHz range and change the default from AM to NFM, and the steps from 12.5 to 5kHz? Oh, sorry, I hope you weren't trying to sell that information like other folks have done.

>another paranoid looking for something to bitch about?

I emailed Rich a question a few days ago and got a well worded, thoughtful
response. Now considering that it seems like every other posting to this
group mentions his site, he more than likely gets alot of visitors and alot
of e-mail. Since he took time to fully answer my question (and I'm sure alot
of others) yes I would agree that the "troubled" person mentioned above is
simply upset because his father didn't tell him that he loved him enough.
Rich has a great site with tons of valuable info, and and a true desire to
help others understand all the aspects of this hobby. Good job Rich.

about the only thing you "CAN'T" do with the R2 is scan specific groups of banks together. It only gives you the choice of ALL or single BANK. I find I can live with this as it's superior sensitivity has brought new listening to the table. The "range scan" was a bit tough to figure out based on the manuals explanation, but now I understand so it is easy.

>DONT DO IT..... Not just cuz of the law, but you
>could toast the chip that switches the bandpass filters
>in the front end!

It simply amazes me how many people are willing to hose a perfectly good radio just to listen to stupid cell phones. I see so many posts in here that all say basically the same thing: "I just bought a brand new (insert scanner model here) and I want to know how to modify it to receive cell phones." Yeah, OK genius, so what happens when that scanner decides to poop out when it's a month old, and the service center won't fix it because they say the cause was your wonderful modification? Even if it was a defect, there's no way to prove it now...

And suppose said scanner is now out of warranty? Do people have so much disposable income that they can afford to throw away their old scanners if they break? I don't, and my salary is higher than the average joe. I'd be really upset if I had to replace some of my scanners, because you can't just stroll into a store and buy them anymore. It would take a lot of digging and bartering to find another PRO 2026 for example, and I'd probably end up paying more than I should just to replace it.

Don't get me wrong, it's fun to open up the case and tinker around, but only AFTER the original warranty is long gone. Doing anything before that is just plain foolish IMHO, and if you really can't live without that scanner you should leave it the hell alone.

You wanna listen to cellular phones? There are plenty of websites that detail how to do just that with an old brick phone, and it works better than any scanner (or banks of scanners) ever could. Stop by any search engine you like and see for yourself.

Just in passing - we are very thankful for folks like Rich Wells who take
the time and energy
to review new scanners - our new TigerScan got some nice P.R. from Rich -
for which he received no
compensation - perhaps those who are really serious about the hobby/utility
of
scanning will notice the effort put into his site and objectively see it for
what it is -
a valuable scanning enthusiasts resource.
Sincerely,
Dave Lovell - RF Engineer/President

Here is some stuff I culled from the ham.space ng:
NOAA-9: APT 137.62 Mhz
NOAA-10: APT 137.50 Mhz
NOAA-11: APT 137.62 Mhz
NOAA-12: APT 137.50 Mhz
From: "KF4FDJ (Mike in Ft. Myers, FL)" <seven77@gate.net>

NOAA-14: 137.62 MHz
NOAA-15: 137.5 MHz
Are NOAA-9 through 11 still transmitting?
From: marsgal42@hotmail.com

Nope both are down 9 totaly and 11 is on standby.
From: Bigdad <Bigdad@rworld.com>

These signals are FM. And your bandwidth really needs to be 40 to 50KHZ,
most scanners provide 15KHz and some(Pro2004/5/6) also give you 200KHz.
The 15KHz is really too narrow, but you can sometimes get an image.
The 200KHz is too wide, and it lets in too much excess noise,

but you can get very good images with a good antenna and an overhead pass.
Do a net search for WXSat, a very good freware soundcard program to
display NOAA APT WXSAt iamges and ideed fax on the HF (SW) bands as weel
Good viewing..

Arizona DPS (Highway Patrol) is currently testing 3 of the S70's and 2 S90's. All five are painted like the regular DPS cars and look really slick. Wow. I was chatting with one of the officers about his test unit a few weeks ago (I was at Burger King and he was in the lot.) He was telling me that they are faster and more comfortable than the Crown Vic's and Caprice's. He also said that Volvo has agreed to buy them back when the cars get a 100,000 miles on them for a pre-arranged amount.

Volvo has made a good move with that one. Besides, we all know that Volvo's are safer than the Crown Vics ever will be..

Well, that figures. I'm sure Rich knows as well as anyone that "there's
always one" or in the case of rec.radio.scanner, there's "one" with multiple
personalities (who has been really quiet lately, maybe he found a new forum
to harass? Let's hope...);-)

Seriously, these kind of people are to be expected. Those of us who visit
Rich's excellent site regularly know better... Best just to ignore such
spurious ramblings from the uneducated.

Yep, that's them all right. I was the person who started this
thread and that sounds right on target. I wasn't sure exactly where
the frequencies started and ended because they are so faint that it
would be easy to miss a few. I would describe them on the diskcone as
a whisper.

Search Australian Telecomunications (or perhaps Communications) Authority
Or Austel (now superceded)

Then search "frequencies"

>Totally impossible!!
Not impossible, but not very easy either. The average power on a hand held is limited to a few tenths of a watt. IIt takes a combination of vapor/air mixture in the explosion range (Depending upon weather conditions that varies from nearly impossible, to well within the realm of possiblity), and a source of ignition with sufficient energy (very hard with a hand held).

Cell phones are designed for several reason NOT to have make/break contacts that handle more than microwatts. (Turn on/off is actually done by software, you hit the off key, and the software will begin the sequence to put the phone into hibernation (essentially only the NV RAM, internal clock is reduced to a very low fequency, and the clock (if you have one) are left running, but that is about all.

I would be much more concerned about a vehicle mounted phone, whose power levels can be MUCH higher.

I have for sale a perfect, as new, NRD-545 DSP receiver. The radio is less than 1 year old and has the latest firmware upgrade. This is a non-blocked unit imported from England and covers 100 khz - 2 ghz. It includes the optional CHE-199 wideband converter and the CGD-197 TXCO. Includes original box and manual. $1,800. I will not ship outside the U.S.

Manuel

I don't see any groups listed where the Morse Code issue would not be appropriate.

All but two are amateur radio related, and shortwave and scanner listeners have to listen to (or try to avoid) Morse Code too.

> apply and take it off soc.penpals.

Let me try to explain. When people reply to a post on a newsgroup, they don't usually read what newsgroups are all listed and delete the ones they THINK are not appropriate. They just hit send, and it goes to all the newsgroups the original post was on. Blaming the person who replied to the post is silly, he did not choose the newsgroups listed.

And to delete any of the groups would be just as silly, because you are sending a reply to the post and don't know which of the groups he will be checking back to read your reply, so it makes sense to leave everything as is.

Why do people hate logic and common sense so much?

Two of my friends are pilots and say this is a bunch of bullshit.
Neither of them had to learn morse code to get their pilot's license and
don't know of anything used in flying their planes that would need to
recieve morse code for any reason.

Radioman, why do you insist on so many crossposts?

It's in poor taste and really annoying to othere that have nothing to do with the subject at hand.

have you tried to unplug the antenna cable from the external avl antenna?
it should be astandard bnc connecter at theradi or the ext antenna site.
try that first save $$$ trying to put together a jammer.

Bob, i did do the mod a couple of years ago ,and i went and checked
it again ,mine definitely locks out the same channels on different banks,
but the the delay is independent,maybe the different type c.p.u. between
the two radios is the difference? I dont know (the older ones being
celluar capable) which mine is , in any case it is a good mod and well
worth the effort.

Greg, C98, a either 22uf/16VDC or 47uf/25VDC capacitor in series with the primary of a small switching transformer on the RF board has gone bad. I had the same problem. 69Cents at radio shack for a new 47uf and it is back in service. The transformer is a very small unit unlike the main power transformer. I had to use a magnifying glass to find it but C98 is stamped on the chassis along side of this surface mount cap. Good luck. 73's Bob, W6JRF.

Find the Audio Chip in the unit. Look for a
small chip cap across the input to ground.
Removing this will give you a boost in the
high freq response so it doesn't sound as bassy.
Usually this helps. I think Parnass did this one
to the Pro43 a long time ago. Have since done
this on many different units with good results.

DONT DO IT..... Not just cuz of the law, but you
could toast the chip that switches the bandpass filters
in the front end! You'd be SH*T out of luck if you happen
to have one of those "modified with epoxy so you cant
mod it" model. The mod forces the 400 mHz filter on
when the unit is in the 800 band. This puts enormous stress
on the IC which does this, forcing the 400 mHz switching
circuit to sink extra current from the 800 mHz one, which
has to source it. These are both on the same chip and
that's the one that they gooped with the epoxy. If
that chip fails.....SOL! Current
consumption of the scanner has been noted as being
double when the unit is in either 400 or 800 bands due
to this mod. I have seen several tosties due to this
mod. To do it right requires the addition of several other
switching diodes to isolate both bandpass filters. Of
course, MANY have done this with no problem, Like
the EPA, your mileage may vary.

Because when any telephone service is implemented, be it GSM, CDMA,
Landline, Trunked, Sea Phone etc..., they are required by law to make
the system capable of being monitored by law enforcement agencies.
These agencies have the equipment to do so and can only use it with
the appropriate Warrant.

I can listen to cell calls on my scanner, and I did not modify it in any
way. Some have older scanners that were made to pick up cell phones. Mine
even tells you in the directions how to properly monitor cell calls.

Yeah. I found this really interesting. But what has all this got to do
with Soc Penpals? I don't really care anything about radio
communications of any sort. So why not just keep this on the boards that
apply and take it off soc.penpals. As far as I am concerned amateur
radio is atrocious, even worse than CB used to be here. I have never
heard of so much crap on any wavebands before. How these people get
operating licenses is beyond me.

Whilst getting some diesel fuel at the filling station yesterday I
noticed this guy at another pump who was filling with petrol (gas) and
was happily chatting on a cell phone at the same time.
I went over to him and politely asked him to stop using the phone.
He asked me why and I said that with the amount of gasoline vapour about
he could probably activate an explosion! He decided to quit using the
phone!!

They will perform wiretaps at the exchange. That was ASIO's concern before
GSM was introduced. Teltra et al had to promise that access was available
and the system was not 'totally' secure.

There is a new QRP kit that just came on the market. The specs are excellent with a innovative design of no wires in the radio.

It is called the K2 160-10m SSB/CW transceiver.

Are there any users of Scancat gold and the Icom PCR-100. I'm really interested in using Scancat Gold but since the tria "demo" version is so limited I can't really get a good feel for the software. don't eant to spend that much money just to find out that its not worth a dang.

If you have both the PCR-100 and Scancat, please tell me your opinion on the Scancat software. Is it better than the Icom software? I'm hoping that it will let you link the banks together unlike the Icom software.

Just from what little bit I tried to use Scancat, I'm not really thrilled with it. Its so basic looking.....althought it might just run better on my laptop since its not graphic intense???

Just let me know what you think of it *if* you own both the PCR-100 and Scancat.

BTW....where is the cheepest place to purchase Scancat?

Let's see, I can recall that there's RadioKit, Vectorkit, Hamtronics, and
probably lots more. Just pick up a TechAmerica catalog and look for
kits, then contact the maker and see their whole line, not just the few
that TechAmerica carries.

Or go to Radio Shack, and look for the catalogs in the stand. They have
LOTs of kit catalogs in there, all stuff you can 'special order' though
Radio Shack. A lot of kits. But some other neat stuff, like Channel
Plus for video...

Good theory but NOT in practice as all Mobile intercepts got via Canberra
and back to the agency to prevent abuse by the agency with the warrant. This
was implemented some time ago now.

Mind you, you need a good brief to get a warrant for intercepting a mobile
phone...

1985. Rich Wells Criticized ??

Newsgroup: rec.radio.scanner
Date: 1999-05-19 00:00:00 UTC
From: Bryan Stethem <bstethem@attco.com>
Message-ID: <7huh7oaov1@ffx2nh5.news.uu.net>
Source record: 118384

This AM I downloaded all the messages from this group as usual. I read a post from a guy who thinks Rich Wells' web site is arrogant, blah, blah, and very dangerous. Right in the middle of my reply my system crashed and now I can't seem to get that message reloaded so I can't quote directly from it. If someone can forward that message to my e-mail address I would appreciate it.

The gist of it was that this guy was offended by Rich suggesting to newbies not to ask certain questions of the group. His guide for new users of this news group is very informative and far from arrogant. Rich has assembled a great deal of information and displays it in a professional manner. Anyone with an ounce of intelligence could view his web site and understand his intent.

Am I wrong? Is Rich Wells the new "Big Brother" using subliminal messages at his site to make us think just like him? Or is this complainer just another paranoid looking for something to bitch about?

Sorry but you are wrong. Commercially produced radios do have to be type excepted to use in the amateur band in the US. Only home-brew equipment does not have to be type excepted, but even home-brew equipment have to comply with FCC specs. Get yourself a copy of Part 95, it's all there.

1988. Help with Opto Scout and AR8000.....Thanks

Newsgroup: rec.radio.scanner
Date: 1999-05-20 00:00:00 UTC
From: Dog@hothouse.com
Message-ID: <374793f1.512268009@enews.newsguy.com>
Source record: 118137

Hi,

I wonder if someone could help me with something stupid that I really should know.

I have an AR8000 which was modified to accept an Opto Scout for Reaction Tuning. I also have a Scout Model 40 which I was unable to find for the past year (it was lost among a load of boxes when I moved). I just recently found it again, but not the manual.

To make a long story short, I forgot how to use the Scout by itself to record freqs. and forgot how to use it for Reaction Tuning. Can someone either help me to remember these things or point me to a website or other source?

Thanks,

Dog

Way not just do what your paid for and you should not have a problem. If your so highly skilled, quit and find a better job, I'm sure other companies would love to have you working for them.

Before I got into computer controlled scanning, in which the
database is part of the controller program, I used FileMaker Pro.
Still the easiest database program I've ever used. It is also the
only one that I've used that didn't require a 3 day class (like
Microsoft Access) to become proficient! It started out
as a Mac program but slowly crossed platforms over to the PC
world a few years back. I store most of my work (office forms)
and home records (vehicle maintenance, home inventory, etc.) in this
database. You can get more info at this link:

http://www.claris.com/

I have no affiliation with the company, I just believe they have an
exceptional product.

No. It limits the charge current but does not monitor battery status or change the charging parameters according to the state of charge. It just pumps enough current through to charge 4 cells "overnight".

> And lastly, I'm planning on installing NiCads that are rated at 850 ma

> Thanks!!

I'm kinda partial to the VX5-R. I bought one a couple of weeks ago and cannot put it down. The small size and the 5 watt output were big sellers for me. I'm burnt out on packet, so that wasn't an issue. I also like the ability to program the radio as I like it using either ADMS or EVE software. It does a good job even on AM broadcast and the SW bands with a good antenna. It is am amazing little radio given its' size.

Hello,

I am in the process of setting up my PRO-2006/OS456 with the OptoTrakker. All that is left is the discriminator and squelch mod that is desribed in the OptoTrakker manual. I have all the parts and am handy with a soldering iron. Will someone please tell me where to make these connections on the PRO-2006?
The discriminator mod calls for a connection to Test Point 2. Where is Test Point 2? Also, the squelch mod calls for a connection to IC3 Pin 3. Where is IC3 Pin 3?

Thanks for any help.

Jim

I'm selling my Pro2005 base scanner with manual and service manual and receives cell phones and has 6,400 memories and also has a short wave mod where you can hear short wave through the scanner. Great condition and comes with a external speaker and base telescope antenna and a radio shack 20-014 base house antenna with about 50 feet of RG6 coax cable. I will sell all for $450.00 dollars not including shipping.Will not sell any thing separate. Sell only as a package.
Thanks

They have to be type accepted for spectral purity..

Not for frequency coverage... And the RCI radios would pass for frequency coverage because out of the box they only cover the legal 10 meter ham band.

Idiot.

> Just how important is it to you to be able to goof off, anyway?

There is a HUGE difference between employment and slavery.
When you employ someone you don't take over their soul, you pay
for them to do a job.
By law, a person gets all kinds of cool breaks and times off.
Many employees work their asses off with overtime and even lose touch
with their families and relatived just because they would rather kiss your lousy ass
than starve.
The least you can do for employees is get off their asses and let them have their free time
doing whatever the hell they want, as long as it doesn't damage your oh so precious
machinery.

2009. FS: VX-1R, HS 200, etc.

VX-1R in new condition $200
Firmware A102, box and literature, spare Li battery, charger, Comet SMA-3 antenna, case, spring belt clip and original clip.

Relm HS-200 Scanner in new condition $135
All original accessories, only 2 months old.

OptoElctronics MINI counter with antenna, like new $65
Pager size frequency counter with packaging, manual, and optional antenna.

Pro 43 excellent condition $200
With box, manual, antenna, case. Date code 9A3, but has never been opened up.
Like new......only flaw: the matte finish has gotten a little shinny around the volume control...but no scratches,worn lettering, or damage.

Shipping included to lower 48 states. Money order preferred.

Thanks,

John - KB2VOJ

Well said, Phil. Most, if they are intent on "infringing" the
law, should simply buy a larger antenna and listen to the image
frequencies. They will quickly get bored without having had
hacked their radio in the process.

There is a LOT more excitement out there than cell...

Strong Signals,

2012. Re: Rich Wells Criticized ??

Newsgroup: rec.radio.scanner
Date: 1999-05-20 00:00:00 UTC
From: "Rich Wells, N2MCA" <n2mca@strongsignals.net>
Message-ID: <3743FA07.3955AAC0@strongsignals.net>
Source record: 118191

I take a day off to enjoy the Star Wars: The Phantom Menace
"experience" and when I return...whoa...what's this? ;-)

First, let me just add my appreciation for all the kind
words people have offered up on my behalf. Your support of
Strong Signals means a lot to me and my efforts to make it
a great resource for hobbyists of all levels. I'm pleased
to hear that people enjoy what it has to offer!

Second, I can understand how someone might misread my tone
in my FAQ and mistake it for "arrogance." I would hope that
my opening comments in that FAQ:

In light of the repetitious nature of newsgroup
activity and the abusive replies that sometimes
follow, I took it upon myself to create this "FAQ"
to help cut down on unnecessary activity and offer
assistance to those who may not know where to start
looking for reference material.

would represent my true intentions. While these newsgroups
are a great source of information and there are a number
of helpful individuals, that doesn't mean that all
experiences are good ones.

It was my hope that by posting a FAQ of helpful hints
that the beginners who often "lurk" here could gain
some useful knowledge in their quest. A place to begin
their research without having to stick their neck out
or having to deal with possible abusive replies that
might even discourage them from pursuing our hobby.

And I must say that I've had a LOT of feedback on my
FAQ and up until this point, it's all been positive.
But I have no qualms about taking the good with the
"bad". That's the risk I take sticking my neck out for
others. Something many can't or won't appreciate unless
they've taken the time and effort to do the same.

Anyone who knows or has dealt with me or my site knows
my real goals at helping to promote our hobby. And it
really is as simple as that. Nothing more, nothing less.

Again, thanks for all the kind words and happiest of
monitoring to everyone!

Strong Signals,
Rich Wells N2MCA

I am the first to agree that many lack common sense these days, but what
happened to all those complaints we used to get from newsgroups that
your posting was 'inappropriate' to the newsgroup in question!
Let's suppose we broadcast this thread in say uk.misc or talk.bizarre,
or maybe even soc.culture.israel then they would soon let us know about
it!

2014. Rich Wells Criticized????

Newsgroup: rec.radio.scanner
Date: 1999-05-20 00:00:00 UTC
From: Bryan Stethem <bstethem@attco.com>
Message-ID: <7i10mf$m7v$1@ffx2nh5.news.uu.net>
Source record: 118193

Since I sort of started this thread, I will attempt to end it. Most of the time when I see a post I do not agree with, I simply move along to the next knowing that everyone has an opinion. It is not necessary for us all to think the same way. However, when a post such as the one I replied to, personally attacks the reputation of a person who is a MAJOR CONTRIBUTOR to this group and the hobby as a whole, I will not let it go unchallenged. Yes, I could have just ignored this post, and maybe it would have went away, but to allow a complete misrepresentation of Rich's character and intent go unanswered was just not an option. Like the old saying goes: "A lie left uncorrected turns into fact".

There has been a sufficient number of posts now, that Rich knows we value his expertise and his willingness to assist those of us known as the "knowledge impaired". I ask the group to now "just let it go". If you would like to let Rich know that you appreciate his efforts, leave a message at www.strongsignals.com. If you would like to flame me for starting this I'm at bstethem@(nospam)attco.com.

There is no controversy connected to Rich Wells as there was with Bill Cheek. I'm sure Rich would rather see this group get back to what it was started for.

Thanks,
Bryan Stethem

You can make an excellent scanner antenna for about $4!! Simply take a chassis-mount so-239 connector (the kind with 4 holes on the corners, about $1.79), and get some scrap welding rod from a friend or someone who welds. cut a straight piece of the welding rod about 36" long, and, turning the so-239 upside down, solder the piece of rod into the inside of the so-239. then cut 4 pieces of rod 20" long, and attach them to the 4 holes in the corners of the connectors with screws, lock washers, and nuts (tightly). Bend down the 4 radials at a 40 degree angle, and voila! you have an excellent broad-band scanner antenna for very little. Atach the coax with a pl-259 connector to the so-239 connector, put it outside, and you're in business.

> Just how important is it to you to be able to goof off, anyway?

There is a HUGE difference between employment and slavery.
When you employ someone you don't take over their soul, you pay
for them to do a job.
By law, a person gets all kinds of cool breaks and times off.
Many employees work their asses off with overtime and even lose touch
with their families and relatived just because they would rather kiss
your lousy ass
than starve.
The least you can do for employees is get off their asses and let them
have their free time
doing whatever the hell they want, as long as it doesn't damage your oh
so precious machinery.

Oh, I don't know, seems to me you want to take his money, what's wrong
with living up to why he wants to give it to you.

Like was said earlier, now is probably the best time to look for a job.

I worked for a while doing 'tracking' with garbage trucks. Talk about
something that could use GPS!! First off, the route was loaded into a
driver terminal via IR, then the system recorded milage as well as other
factors.

Some terminals got 'damaged' by the drivers. But a pattern quickly
emerged as to who damaged them and when. Then watching those
routes it was found some drivers had their 'own' customers...

You know, I saw the original post, and I thought that the suggestion for reading was pretty well thought out, and well intentioned, even though it was kind of 'pointy'.

A lot of newbies want quick answers, but at the same time they want the reference to read at their leisure. In that regard, the list was pretty
damn good.

I thought the posting about censorship was paranoid and reationary. The original post didn't say you couldn't post questions, it didn't even give me the impression that the simple asked the same every week questions weren't to be tolerated, but that if you wanted to look first instead of appearing foolish, here's where some answers could be found.

But still asking questions is a LOT easier than reading a book to find that one piece of datum.

2026. ICOM 8500 losing sensitivity

Newsgroup: rec.radio.scanner
Date: 1999-05-20 00:00:00 UTC
From: robertr@netcom.com
Message-ID: <robertrFC1G08.FAy@netcom.com>
Source record: 118205

I recently connected an outdoor ICOM discone to the ICOM 8500,
after previously using the ICOM with various indoor whip and amplified
antennas with no problems. Everything seemed Ok for about a week until
a heavy rain (no major lightning though, so shouldn't have had any damage).
After removing the coax to connect to another radio and then putting it back
in, signals strengths on VHF (especially FM and TV) are dramatically
reduced (stations coming in at 7 now get about a 3). I tried again with
the indoor whips and results were even worse. Ironically, the shortwave section below 30
mhz is fine, though it uses an SO-239 connection instead of N.
Anyone run into something like this with the ICOM, or am I just getting
really yucky propagation?

>if you don't like it Phil you can go and stuff yourself!

Keith, there is a difference between being safe and being paranoid. Being safe would be to ask some idiot who is puffing away on a cigarette at the pump to put it out. Paranoid is what you described. There are far better chances of an explosion being set off by a backfiring car then by someone's cell phone. Or do you insist that those around you push their cars away from the pump before starting them? Don't you see how ridiculous you are being?

Or could it be that you are just one of the many weirdlings we get in here who have nothing better to do than pick fights on usenet. I've seen my share of them too. Which are you? Time will tell.

-Phil

And if you want to mount it in a fixed location, get some 1/2 EMT conduit,
with one of the couplers (for joining 2 pices of EMT). A SO259 will fit
nice and sug in one end, while the other end clamps to the EMT. Some RTV
will seal the whole thing and it will last for years. (The coax goes up
trough the conduit). I have one in service at work and it has been up for
over 15 years and still works great.

Although I have no preference of the two radios you listed, they both will
work for packet radio, at least at speeds of 1200bps.

Used less than 5 hours? Even for an expert it would require more than that to completely test out the radio. Are you sure you want to sell it so soon?

took mine back for a refund today , I thought it was poo !, it will not pick up a gsm mobile phone (not mine anyway) and i tx'ed a 4watt transmitter on a 21 ft antenna 20 feet away and nothing !.

i even done a little test with the top of the range scout and the mini scout and neither picked up a small 49 mhz walkie talkie from around 15 feet away !.

not good enough for me anyway

This is not a spam. I can't find the original post to quote but this guy will know what I'm talking about.

First of all this is going back many years. The b_stards first burnt down her house to try to get rid of any evidence she might have against them in the future. Unfortunately, she survived with the lyrics they were after. They were and still are stealing from her. And if that weren't enough, they have made it virtually impossible for her to find work never mind follow the dreams she once had. They've basically blackballed her by telling some lie that nobody will talk about thereby creating a wall of confusion. Now they want to torture her as if SHE was the one who screwed up THEIR life! They've been entering her home altering documents, stealing and damaging her things. They set up their little network to stalk and harass her constantly. Then they convince themselves she's a non-human and have begun to physically torture her to get their kicks. They have raped her and she can't even report it because those guys back up one anothers story! She's basically hopeless at this point because they keep covering up all evidence and boy do they have connections! That's obviously why people that know are either afraid to talk or are just as sadistic as the emotionless, perverted b_stards that are doing this to her. They even filmed themselves violating her and pass the vid around for kicks. I think this is disgusting and If you think it's "cool" then you need a soul check! As for me, I'm doing whatever I can to help her get any proof I can. I don't know how I will do it especially knowing these are public officials and media people we're talking about that are the initiators. All I know is I can't stand around and watch an innocent person be taken advantage of and suffer needlessly at the hands of bully's. God knows just ignoring it will only make them think they can do it to other's in the future. They've got to be stopped!

Well, that's the gist of what's really happening (actually it's even worse). You shouldn't believe all the hype you heard, they're just trying to turn you against her to cover their own a_sses can't you see that? You should come clean with what you know. If your afraid then just send an anonymous letter to state & government officials asking them to put an end to it.

To everyone else who has no idea what this is about, I apologise (no spam).

Thanks for hearing me out.

2049. EDACS- What Is High Pitched Noise?

Newsgroup: rec.radio.scanner
Date: 1999-05-20 00:00:00 UTC
From: kb9akp <kb9akpNoSpam@ibm.net>
Message-ID: <37448947.C82AE7D1@ibm.net>
Source record: 118228

Hello all,

I have a question about EDACS....here goes.

With the up and coming 245xlt I'm trying to isolate the actual repeaters for all of the GE systems in my area. Since I don't have a data slicer, I've been doing it the crude way. What I've been doing is finding the data channels in my area and then, using the online FCC database, Percon, and so forth, I find all of the associated repeater frequencies associated with the data channel. I put them all in my scanner and scan them for a couple of days to see which ones are active.

On some of the frequencies associated with the systems I hear phone calls with a loud squealing tone over them. For instance, one particular system (an SMR) in my area is licensed 30 frequencies and of those 30 repeater frequencies, 20 of them only have these phone calls with the loud squeal and don't have any radio transmissions on them.

My question is what are these phone calls/repeaters and are they associated with the system? Am I going to need to program those into my scanner in case they become part of the SMR?

Any help appreciated,
David

Message-ID: <927222346.159401@axilla.wwnet.net>
Source record: 118233

Hello,

I've acquired a used R10 that came with the Icom BC-110 Charger.
The charger is rated at 12v at 200 ma. In the manual, it shows a BC-74 (ma
rating unknown). Does anyone know what the rating of a BC-74 is?

On a similar note, does the ICOM R-10 have a built in regulator that
keeps the batteries from being overcharged?

And lastly, I'm planning on installing NiCads that are rated at 850 ma
each. Has anyone tried this?

Based on advice from others on this NG, I bought a Radio Shack Quick Charger and some Ni-Cads for my R-10. I've been very happy with this setup, and it helps keep your unit safe from any accidents that might occur with charging them in the scanner. The quick charger does it in about 1 1/2 hours.

Ditto..... Richs' site is the ONLY 5 star scanning related site, in my opinion, out there. For those who criticize I ask if they have the talents, knowledge, and dedication to put a site together like Rich has. And he keeps it updated, always adding new features, new scanning related news, etc. The criticizers take a few minutes to type a few words, usually ramblings or flames, on one of the newsgroups. That's about it ! Not even close to what Rich has offered the scanning community. Keep up the GREAT work Rich !
And to the criticizers, spammers and flamers .... KMA !!!

Turboscan TS-2:

Scan button, manual button do not work.

Most number buttons do not work.

It shows only "5" and multiple "5"s on the display.

This happened suddenly.

What would be the best fix for this? (Other than a new scanner, of course.0

Thanks,

Joel Sturm

>I think its arrogant of Wells or anyone else to tell a Newly or an oldie
>what questions to ask or not ask

Rich's FAQ does not discourage people from asking questions. The FAQ simply points newbies to other places where they can get answers to their questions.

Look at the number of posts on this newsgroup from newbies asking questions like "How do I find the local police frequency?" or "What is the cell mod for the BC 895XLT?" The "experts" on this newsgroup get tired of answering the same newbie questions multiple times. The newbie questions are often ignored because we are tired of answering them over and over.

Rich should be thanked for pointing the newbies to places where they can find answers to their questions. Hats off to Rich for a job well done!

Give me your opinions
Thanks,
Raz

You can make an excellent scanner antenna for about $4!! Simply take a chassis-mount so-239 connector (the kind with 4 holes on the corners, about $1.79), and get some scrap welding rod from a friend or someone who welds. cut a straight piece of the welding rod about 36" long, and, turning the so-239 upside down, solder the piece of rod into the inside of the so-239. then cut 4 pieces of rod 20" long, and attach them to the 4 holes in the corners of the connectors with screws, lock washers, and nuts (tightly). Bend down the 4 radials at a 40 degree angle, and voila! you have an excellent broad-band scanner antenna for very little. Atach the coax with a pl-259 connector to the so-239 connector, put it outside, and you're in business.

2082. Re: Phone Range

Newsgroup: rec.radio.scanner
Date: 1999-05-21 00:00:00 UTC

Source record: 118039

I also have been in contact with Panasonic, and after repeated messages, I was able to get a clear idea of what is wrong with their Gigarange phones. They are ANALOG.

Yes, they do use spread spectrum technology, but the carrier wave is modulated with an ANALOG signal. DSS my ASS.

Here are a couple of messages from Panasonic:

****
Dear Mr. Smith,

As you state, the scanner is apparently set to a "Wide FM" mode. This means that the scanner is not looking at a single specific frequency. Rather it is
scanning (monitoring) a very wide bandwidth of frequencies which may be including the low channel through the high channel assignment of the phones transmission. Under this situation, even if the transmitter is frequency hopping many times every second through its block of 8 channels, most or all
of the 8 channels may lie within the extended bandwidth of the scanner when it is set to this wide bandwidth mode. If the bandwidth of the scanner was narrowed down, it may still pick up some of the transmission but as the phone hops through the channels, those which are then outside the response bandwidth of the scanner would cause the scanner's monitored audio to be chopped.

Best regards,
Panasonic Consumer Products

Hello Mr. Smith,

Some spread spectrum units in addition to frequency hopping through various channels may also encode the audio modulation using a system of analog to digital conversion. The carrier is then modulated with digital pulses rather
than an analog signal. At the base unit the digital coding is then converted
back to analog before placed on the phone service line. In this case, even a
scanner can not adequately decipher the pulsed information which represents the audio signal. Though this is very expensive to incorporate it does provide the highest possible security currently available. Panasonic made a model KX-TCS970B standard 900 MHz spread spectrum unit which functioned this
way. These units would not get as much range as a "GigaRange" unit using

two
separate transmit bands, but the audio which is placed on the carrier is
extremely difficult to monitor as a digital to analog decoder is needed on
the receiver end.

Best regards,
Panasonic Consumer Products

****

The first message explains why their Gigarange phones can be picked up by a
scanner, and the second explains why true DSS phones cannot.

bye,

Norman

Don't foget Spark Gap. For those of you who do not know what DX is; it
means receiveing a radio/television signal from far away. From far away
as in you usually do not get a signal from this place. DX can also mean
how far your siganl is getting out. From everything that I read; if you
can run just 10 watts, and your siganl is getting out 300 to 400 miles
then that is better DX then somebody running 1000 watts and doing th
same thing.

I have made a coax Dipole and it seems to works well when I run it to my scanner with a 3 foot jumper. But when I run it down from my attic with 40-45 feet of coax , it seems to suffer alot of loss. Does anyone have any ideas or experiance? Do I need to change my antenna length because of the coax run ? If so how much shorter do I need it ? I used the formula(300 divided by the MHZ) , then stripped 1/4 of that figure .
Thanks,
Raz

Since when do TV station broadcast in one colo(u)r as the name
Monochrome would imply. Heck, even Black and White is two colo(u)rs.
By the way, the best Black and White is what is know as a Twistee cone.
That is when they combine Vanilla Ice Cream with Chocolate Ice Crea.

Back when I thought it was neat to do such things, I used a signal generator, HP-606B, and connected a mic through an audio amp to the external modulation input. With a 3-volt output into 50 ohms, that should equate to 180 milliwatts. Less voltage = less wattage. Had a range of about fifty feet as I recall. Drove some intercept operators buggy. Sure was fun though.

One of the local scanner hobbist told me that Bill Cheek
was arrested for making a decoder for the Motorola MDT.

Cheek appearantly posted this on his web page which
resulted in his arrest. While this sounds strange,
did it happen?

With the Clinton administration repealing most of the
civil rights gains of the '70s, people are a little
concerned.

If I remember correctly, LA County Fire and LA County Sheriff use a tone onthe input to the repeater but no tone on the output of the repeater. LACFD uses 151.4 input only and LASO uses 186.2 input only.

Hope this helps ...

Teh antenna does not change with the length of coax. What is going on is that the coax has loss in it. Depending on the type of coax and the frequency you will stand to loose a lot. Also there is another loss inthe coax that is caused by what is called SWR (standing wave ratio). If the antenna is not resonate at the frequency and the scanner is not matched to the coax, the losses increace rapidly.

First of all I have a commercial pilot's license with airplane single and multiengine land and instrument ratings. I have been flying since 1967. I own and fly a Baron. No I didn't have to learn Morse to identify navigation aids, the CW is printed right on the chart or approach plate. The statement "don't know of anything used in flying their planes that would need to recieve (sic) morse code for any reason" is fascinating. What do your friends fly? Ultralights? What are their license numbers? Mine is 1774847. My Baron's call sign is N502TB. When you tune in an NDB, a VOR, or an ILS you are taught to listen to the CW identification to confirm that you have the correct station. This takes more time if you have to look at the chart or approach plate to see what the CW is rather than just hear the ID.

I opened up my scanner because my recieving performance was not up to par. I have a Uniden Sportcat which I do actually like. When I looked at the back of the board, there was this giant blob of solid, glassy stuff where my friend had put in a wire from the BNC connector to the board because the factory wire broke. Is this any realtion to why my performance is not good? What else could be causing this? I bent the BNC connector on the top, however I still can get the antenna to fit into place without a problem.

Please Help!!!!
Thanks in advance

eoppegaard@cshore.com

You may be listening to such a "low power transmitter" as we speak. . .

I'm talking about the local oscillator in a portable radio. I used
to try the following when I was younger:

1. Get a battery powered AM radio. (The smaller and cheaper, the
better)

2. Connect a short piece of wire (no longer than about 10 feet)
somewhere on the radio. Ideally I guess it should be connected to
the local oscillator coil or some such, but I've connected it to the
main antenna coil, one of the battery terminals, etc. and it works
just as well.

3. You'll probably want a modulating signal: a quick and dirty
way to get one is to connect such a signal (e.g. the speaker output
of a record player, scanner, stereo, etc.) in series with the radio's
battery.

4. Frequency selection is done via the tuning knob. Note that the
local osc frequency is 455 kHz (or whatever the IF is) higher than
the number marked on the dial; a radio with a 530-1700 kHz tuning
range will transmit from 985 kHz to 2155 kHz.

5. Let the good times roll. The power output is not much and the
modulation quality is not the greatest, but you'll be able to hear
the signal around the house and yard, at least. . .

2119. Re: Emergency Monitoring-Why not built-in monitors?

I'm fully aware that the emergency channel for the CB radio is channel
9. There's no reason why FRS channel 9 can't be designated as an
emergency calling channel like the CB radio. That way it will be
common to use channel 9 for both CB and FRS.

Wow, looks like I struck a nerve there. Perhaps you're one of those slouch civil servant types who feels that the world owes them 2 hour lunches, a 4-day work week, a 6-hour work day, and the freedom to misuse your boss' equipment in any way you damn well feel like? Whatever your occupation (if you even have one), it's pretty obvious from your attitude that you're not a busines owner.

>The least you can do for employees is get off their asses and let them =
>have their free time

Nobody's talking about FREE time, we're talking about time spent on the clock, using company equipment.

>doing whatever the hell they want, as long as it doesn't damage your oh =
>so precious machinery.

As an employee, you're paid to do a job. The machinery you use in the performance of that job is not yours to "do whatever the hell you want" with, whether you cause damage to it or not. If you goof off, or if you misuse your employer's equipment, the boss has the right to know about it. If you don't like it, the solution is pretty simple: find another job, or better yet go start your own company and let your employees be as unproductive as you like (as long as you can stay in business, that is).

If by "PCS" you mean a CDMA phone (e.g. Sprint PCS) then you won't get
a reaction from the Scout. CDMA phones are digital spread spectrum;
the Scout only works with FM signals.

The same reason why radio TX devices are warned away from all explosive situations. Haven't you listened to the way the emergency services abandon the use of radio or telephone gear when attending gas leaks etc???

Here try this exercise and you will find out the way a friend of mine did...

Get a HF ham licence and high powered Tx unit and a really good ATU and load up a stink pipe (sewerage ventilation pipe) you know one of those strange looking tall pipes that some people have in their back yards. Anyway load the sucker up and wire wrap if necessary to get a usable VSWR on the 180M band then tune to an appropriate section of the band and put out a few CQ's ....

In very short time you will find out that methane like Petrol is rather explosive! :-)

Phil

The Gigarange phones are analog. They are spread spectrum, but the carrier wave is modulated with an analog signal, and this can be picked up with a scanner set to wide FM mode.

Whilst on the same subject a number of traffic accident fatalities have
been caused here by drivers using cell phones, including head on
crashes! Trouble is our road traffic laws are so slow to be changed that
no doubt the carnage will continue.

Can anyone tell me if the above agency uses any subaudible tones when transmitting on their 470mhz freqs? Trying to monitor this department in the metro L.A. area on an R2 is pretty tough with all the imaging this unit seems to pick up. I've done some tone scanning but so far no luck..

thnx,
Rich

Go to my Scanner Dealers FAQ and look up all of those that are listed
as carrying used equipment:

http://www.strongsignals.net/htm/dealers.htm

Grove and Universal Radio usually have a decent supply of used radios
on hand.

Hi,

Does anyone, I mean anyone (even some authorised
Motorola dealer) know anything about Motorola
MX3000 radio??
Our company has some (bought few years ago, and
I started to work here about a year ago) but
nobody knows where from, or where are all those
cables and software.
We also have some P210 and GP300 with programmers,
cables and software, but I need to program those
MX3000 - because they are useless on that old
frequency.

Please contact me by e-mail.

I am always amazed that people don`t just use Microsoft Works for this purpose. I have been using ti for years here, and it serves the purpose admirably. I have had the same databases through 4 different versions of Works, and they all still work just fine, although I am now using Works 4.5. (I started out with 2.0)

I can save the database in various formats, (DBase III is my all - time favorite). I can access this Database from Visual Basic, using the ADO, and have a workable database program that uses it in an hour. I can also use that same database in Probe, and I can even import that base into Trak Star.

If I want to create a base from my Grove CD, I can do the search, then save the file in comma - delimited text format, and import it directly into Works. I can then save the base in DBase III format. Now that is flexibility !

> I was the original poster. Want to sell me that AOR 8000?
> I want a decent radio that will reaction tune my Scout.

> Mike

I had an AOR8000 and I sold it. I found it too clunky. Besides, adding a discriminator/Scout socket to it involved punching a hole in the chassis.

The Icom R10 has a C-IV socket built-in, and reaction-tunes my Scout just fine. And, the R10 can be mod'ed for discriminator without messing around with the chassis.

The middle ring of the C-IV socket is unused, and you can draw the baseband output there. Use a stereo jack, and you're laughing.

Not sure if this helps!

Regards

2156. For Sale Cobra 2000 Excellent Condition

Newsgroup: rec.radio.scanner
Date: 1999-05-21 00:00:00 UTC
From: Sam Wolinsky <pcmedicnj@yahoo.com>
Message-ID: <7i3uv8$6ms$1@holly.prod.itd.earthlink.net>
Source record: 118118
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.cb,rec.radio.scanner,rec.radio.swap

Hi all. I have for sale 1 Cobra 2000 base station CB with the speaker. Radio has been modified to cover from 26.815 Mhz to 28.045 Mhz. Radio transmits 20+ watts, clarifier has been opened. I have received several reports of good signal/audio from stations that are 30+ miles away from me. I am not real technical so beyond what I have told you, I don't know anything else about the radio.
I would rate this radio as an 8 out of 10. No scratches ect that I was able to find. Also included is the original manual, original 1 year warranty certificate, copy of service manual.
From what I have seen and heard, the 2000 is one of the top of the line most sought after radios that was ever on the market in its day. After using it for a brief time, I could see why as it is an excellent radio.
Price is $275+ shipping costs, prepaid via USPS money order. References available upon request.
Please contact me at jces9033@hotmail. com if you are interested in this fine rig.

Check your local wall mart. They have (or at least did 3 months ago) 2
units.
The first is an FM-MPX(stereo) Tx that uses 2 "AA" cells.
The second is for automotive use and comes with a cigerette lighter
connector, with a step down regulator for 3/6 or 9 Volts.
The input on both is a stereo miniplug (3 conductor 1/8" male)
They can send a signal up to about 20' and are farily stable.

It is a freeware package for the VX5. It seems like a good program, but

I haven't had a chance to use it much.

The URL is http://www.geol.com/vx5/

If I remember right, I don't think either L.A. county fire or sheriff uses
CTCSS tones (I know for a fact that LA County Sheriff doesn't). I'll be in
California this weekend, so I'll find out for sure and report back on Monday
if you like.

That does seem to be a good setup, but remember what Ben said: He needs a *simple* database prog. Works may be simple as far as standard databases go, but there are many people out there that could get by fine with a more bare-bones type, which includes most databases designed for scannists. I mentioned before that I am trying out Frequency Filer....it needs improvement IMO, but it may be just fine for other people. I like your way of thinking though....I may start using Works or even Access myself.

It's an abbreviation for "Handie-Talkie", coined by a certain manufacturer of handheld radios (the manufacturer escapes my memory...Motorola?). It is used by Hams and radio buffs to describe walkie-talkies and other handheld tranceivers. I have heard some people use it to describe handheld scanners, which, while not exactly correct, still gets the point across.

At roughly Fri, 21 May 1999 14:37:50 -0400, "Asmodean"
<asmo@third.age> let loose the following:

>It's an abbreviation for "Handie-Talkie", coined by a certain manufacturer
>of handheld radios (the manufacturer escapes my memory...Motorola?)

Yes, afaik coined in reference to the motorola Handi-Talker UHF (and I
think VHF also) set, popular in the late 70s / early 80s (HMP had a
few HTs if I remember correctly) and the name stuck...

Authough its such an appropriate name I think its a bit of a "chicken
or egg" argument as to which came first..

Motorola still use the term HT as a generic reference to handheld sets
as do many manufacturers and hobbyists

John Reimers (jjr@inlink.com) wrote:

> Scanner and HT's can interefere with flight instruments and data systems.
> As a ham and a scanner user you should know that.

True.

This was discussed at length on a similar newsgroup about ten years ago...
one followup poster related an incident who as a passenger on a 747, said
he performed a hammerhead stall and several touch-and-goes merely by care-
ful adjustment of the controls on his handheld transceiver.

Seriously, one very popular 2M handy-talkie has its first LO radiation
falling from 122.6 to 126.6 Mhz @ -57dbm at the antenna port. Pretty
weak signal, but I still wouldn't feel comfortable riding in the same
aircraft as this radio.

Be careful with Panasonic. They are marketing some analog phones as DSS.

Their Gigarange series does use spread spectrum, but the carrier wave is modulated with an ANALOG signal and it can be picked up with a scanner set to "Wide FM" mode. This is ASS in my book, not DSS.

I am not sure about the particular phone you mentioned, but their KX-TG210-B most certainly behaves as I described. This particular phone is at 2.4 GHz from the base to the handset, but 900MHz from the handset to the base. Many scanners are 900 MHz capable, so those signals can be picked up easily with no need for a Digital to Analog converter.

bye,
Norman

well Phil, it can happen and it has happened. A young woman turned into a fireball in Sydnay about three years ago from just this very thing. Which is why there are signs up on every gas station around here notifying users to not smoke or use cellphones whilst refuelling.

Brad.

Microsoft Access and Excel work quite well as database programs. In
fact, most spreadsheet programs can be used quite well as a basic
database program. I remember a shareware program called As-Easy-As
from many years ago - might be worth chasing up (if you don't have any
name-brand software).

That's because you're not familiar with the rec.radio hierarchy; here's
a reminder:

Subject: List of the rec.radio newsgroups
Followup-To: poster
Approved: news-answers-request@mit.edu,rec.radio.info-moderator@primenet.com
Distribution: world
Expires: 01 June 1999
Summary: This article provides a list of the rec.radio newsgroups; it is
posted alternately with the longer "Guide to the Rec.radio NGs"
Keywords: radio amateur ham cb scanner shortwave netiquette
X-Last-Updated: 1998/03/29
Version: 1.1 created 98/03/05 03:50:23
Posting-Frequency: posted on the 1st of each month

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and the contents of such a thread drift further and further away from being "on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O, and your friendly rec.radio.amateur working-group

2187. Re: Denied Aircraft bording with HT - was this legal?

Newsgroup: rec.radio.scanner
Date: 1999-05-21 00:00:00 UTC
From: robinson <rmcrusoe@gte.net>
Message-ID: <uq413.1928$kn6.46699@dfiatx1-snr1.gtei.net>
Source record: 118169
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,soc.penpals

I think we are all agreed, that as per the rules, we may not transmit without permission of the pilot, on an aircraft. Posession of a radio does not imply use of it, or intent to use it. A licensed ham, by virtue of having a license, is by implication willing to follow the rules. My contention that the airline may refuse to allow an HT aboard, and that the passenger may refuse to fly that airline, and may tell anyone who will listen to do likewise, is based entirely on common sense.

I think we would do better to post those carriers who have a history of non-cooperation with traveling hams, and avoiding, where possible, those airlines, and seeking to educate them to the extent possible. This argument appears to be a dead horse, well beaten.

hello,
the Scout ... and all other handheld counters...can only pick up an analog
signal with continues transmission. The short bursts of digital communication
like GSM or DECT can not be picked up.

One would hope that it also applies to cell phones. What about two
pagers? How come this does not affect the phones on the planes.
There are two types that I am aware of.
One type tramsits in the 400 MEgacycle band and another transmits in
the 800 band

Wow, I never heard os such a thing. Hear in Ohio, one of the suburbs
passed a rule that states that you can only use a cell phone for an
emergency or you will get a ticket

That is just as bad as running the car while refueling. I wonder what would happen if everybody had atomic powered cars. Would an explosion result in a atomic chain reaction

2202. Inverter Program Problems

Newsgroup: rec.radio.scanner
Date: 1999-05-21 00:00:00 UTC
From: Bubba Joe Smith <bubbajoe@MailAndNews.com>
Message-ID: <eM513.110$pr.171202@client.news.psi.net>
Source record: 118184

Since I have gone to windows98, the inverter program won't work. It gives
me
an error message that the WAV output device is already in use (no other
programs running). Anyone know what that is about?

thanks

Ben, I have been using a simple program for about eight years called RAC Frequency Catalog V1.1. The whole thing is less than 120K zipped. NEVER had a problem with it. I have a lot of freqs in my database and it's never crashed. It is a DOS program. I run it under Win95 just fine. Neat thing is, I can open it in dBase or MS Access. It creates a standard dbf file. The reason I do this is because the report section is kinda weak. But you can sort on various fields, create multiple databases. I really like it. Very low overhead. Not sure yet if it's Y2K. :-)

If you'd like to try it, let me know and I'll email it to you.

If you just want to "heat up" the newsgroups - just ask for some MOTOROLA software! That brings 'em out every time.

Meanwhile your device isn't really available commercially, but you CAN BUILD it.
Parts shouldn't be too hard to find. Browse the net for plans for a "Spark-Gap" transmitter. Build the biggest one possible - just like the old days ----

Uh, don't forget to wear a "safety" ground strap around your ankle - connected to
a real good ground...

It should work great - remember to hold it close to the dish -

Oh yeah, be sure to pen a check to the local mortuary and make all arrangements for a hasty departure - These old 'spark gaps' had a way of weeding out the incompetent radio operators quickly..

Personally, Id rather ask for some copyrighted moto software..

~CQ

2213. FS: PRO-2035 Base Scanner - Mint

Newsgroup: rec.radio.scanner
Date: 1999-05-22 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <iNA13.205$I7.2747@iad-read.news.verio.net>
Source record: 117895

Hello. I have a Radio Shack PRO-2035 base scanner for sale. The scanner is at least a 9/10 cosmetically and it works 100%. It has very, very low use, and I've had no problems with it at all. It has 1000 memory channels, one touch weather, VFO knob, NFM/WFM/AM, RF ATT, RX from 25-520 and 760-1300 MHz (minus cellular), keypad, and data skip. This scanner can even be modified so that it can receive VHF/UHF in CW/SSB in addition to FM/AM if you have a SW Receiver, but I have not modified it for anything.

The scanner comes with the indoor telescopic antenna, AC power cord, base stand, original box, original packaging, and the original manual. First $310 gets it (that price includes the radio, UPS ground, and insurance). Please let me know if your interested. I would trade for a Ten-Tec 253 HF auto-tuner or like model. Thanks a lot for reading.

Yes, that's normal. Strange indicator, but normal! It's supposed to tell you which of the frequencies is being used at that moment. (Not to be confused with ID #'s).

Robert,

As I think it is desirable to share information and important to encourage newbies, I was about to post a detailed answer to your question. It is a matter of some technical interest. However, having read your nasty, juvenile, and petulant last paragraph, I think it is best to leave you in your ill-informed and anti-social ignorance. Do you really expect others to help you after being so gratuitously nasty?

Michael K.

I am sorry if I sound nasty, juvenile, and any other things you wish to call it but I am at my wits end with people answering my post with not what I had asked but telling me that it is illegal or whatever. I just tried to make a point. Not to piss anyone off. To see what I am talking about look for my Primestar satellite question and you will see what I mean. I hope this clarifies any misunderstandings. In the future, I will try to be less hostile. Thanks

Robert

Very simple problem, Robert. Just build a hugh arc generator based on
Tesla technology (old technology) and have at it! You can be assured
that some irritated neighbour will come at you with an 9mm and shoot you dead if you don't
electrocute yourself first.
Try it, you may like it! ;)

Why not just transmit on one emergency frequency. Then you won't need
to transmit on the other frequencies since they don't allow you to
have transmitters at Lewisberg.

It's all true.

He was arrested, much equipment was confiscated, & he was imprisoned
until he
made bail. He now faces federal charges & possible state charges.
Things look fairly
for him as he has a previous ciminal record (by his own admission) and
he wife may
always volunteer to turn to give evidence & act as a witness against him
to save herself (she
has also been implicated becasue the business was in both names).

Is Mobile Radio Resources still in business?
MRR is located in San Jose, California.

MRR published three frequency directories for California,
Government Radio Systems, Military Radio Systems, & Federal Radio
Systems.

The directories contained very accurate information.

Where can I purchase new editions of the directories?

Thanks.

Brad.

I remember when I worked as a supervisor with a security company.
On one particular site, a chemical plant, the detex clock kept "being dropped"

or "wasn't working." Well, we set up a nice sting, another supervisor and I.
12 hour portable video setup. We actually caught our security employee
slamming the detex clock onto the desk and not walking his rounds the
entire night. When asked why there were no detex records, he said the clock
didn't work when he came onshift. <Previous shift had no problems.>
Not only was he fired, his final paycheck was withheld for
misusing/abusing company equipment. As far as this GPS equipment
thread, the truck, and the GPS equipment belong to the company/employer.

Seems to me, if the GPS equipment bothers the gentleman, he should seek employment with a company that doesn't use such technology.

Replying to no one in particular,

he has an office in San Jose
he will mail
or at Scanners unlimited
in san carlos

or a scanner store in
San Mateo....

a lot of Ham stores carry
his great manuals also.

why not try to see if
Scanners Unlimited has
a www site.

listen up you anal retard
given wretch by your five-
nosed mama.

One nose each to smell
your ass each day to
make sure you are not
hers.

Anytime Bill Cheek find himself
in need of funds for his
defense all he has to do is come
to us in this and other NG's and
i'm first in line to send him what
I have at that time.

I am sure there will be many
hundreds or more...who will be
on that list to help Bill for
his needs. All he has to do is
ask....that's how fast I'll send
my donation for his defense.

Now you mind-less cripple....

How many of us will send you
funds if you get arrested one
day, hopefully soon?

Answer that you smelly sack
of vomit burgers.

bill will be given help because
he needs our help.

i am sure all of us will send
you a bill for all the shit you
have chunneled out on this NG and
then allow you your due.

the sound of a shit-pie rotting.

bill conduit
etc.

Right now. Right here. You don't know anyone in aviation. I flew my last IFR cross country Thursday. Damn if the Centex VOR didn't go _. _. ._ _ _._ "CWK". Then the Waco VOR went ._ _._. _ "ACT". Then the Waco ILS went .. ._ _._. "IACT". The Navaids that don't do it (CW ID) are LORAN and GPS. Pack up any sectional aeronautical chart or approach plate and the
CW is printed next to the Navaid identifier. That's the last for your troll, wankstain.

Just as I had anticipated. Mostly everyone telling me that its illegal. I know its illegal. Did I ask to purchase one? Did I say I wanted one made for me? No. I simply asked if there was one out there. Why is it so hard for someone to just answer the question that was asked? I give up...
Well thanks again...
Robert

>My question is what is WFM used for??

My guess is as good as anyone's - for audio quality. Television and commercial broadcast radio (88-108 MHz) uses it, as well as wireless microphones, I think.

>When I search the 800MHZ I can hear a
>lot of communication under wide fm but not regular fm. Are they using
>different types of radios/??? Thanks for any help...

In my area, I am not aware of any 800 MHz systems that use WFM. Is it possible that you are hearing signals other than voice, such as data?

RTF

Maybe it's because you insulted everyone reading this newsgroup. On top of that, you did it before anyone responded. If it wasn't an insult, it was a slimy attitude, at the very least.

Common to CB & FRS? Yeah, except for being about 425 megahertz apart from each
other, sheesh.

Besides, as has been pointed out GMRS stations *cannot* receive that channel.
If you want to have a channel monitored, face the fact that it will *only* be
effective if you can get small GMRS base stations -- with real antennas -- to
monitor it.

>purpose.

Not trying to put you down or anything, but MS Works, Office & most
programs published by MS are "bloatware".

I use ClarisWorks for everything; a TRUE integrated works package
resulting in much less fat, unlike MS Works or Office which are
basically a bunch of seperate programs thrown into one box.

Have some time? Then take a look at
Peter's Scanner Pages on URL:

http://leden.tref.nl/bommeltje/

A lot of information about scannerlistening,
frequencies, Acars, Wintone, databases,
scannersoftware, tips, etc.
Both in dutch and english language.

Already bookmarked this page?
Then please check the url: it has changed.

Greetings from Holland, Peter van Bommel

I HEARD THIS !!!!!!!!
The RADIO SHACK officials and designers they rush in the theaters to watch the STAR WAR movie.After the movie they all site on the table and they try to designer a scanner like the one those Captain's have on the movie.
The scanner will be very small (Like Rolex watch)and they will cover the all spectrum!!!!!!!
Also there is no duke or external antenna ,and no buttons .
To program the scanner is very simple ,just talk to the scanner and automatically tune the frequency or any other function .
Also the scanner speaks 10 different language,play CD'S and MP3 ,unlimited channels and banks,
say time and date when you ask,hear the spaceship millions miles away,or any broadcast from anywhere in the universe.
Also they say (RS Officials)the sensitivity will be so good you can hear baby monitor IN TEXAS FROM CANADA !!!!!!!
There is more and more futures i can't list here now
!!!! S O R R Y N O C E L L U L A R !!!!!!
They will be on the market sometimes on the year 2000
So what do you thing ????
P.S.
They haven't set the price yet ??,but my good sources tall me about $289.00 - $399.99 + tax

If you are "handy" with a soldering Iron and happy to do a little and
not very complex disassembly the Rotary Encoder is quite easy to
replace.

>repaired and how much it might cost? I am not competent to go into the unit
>myself. Thanks.

...should have read that first :-(

Cheers,
JC

This is not practical. I've seen how much power it takes to physically shake a house from a distance (the walls, not just the windows) at under 5Hz, and I doubt that the neighbor would be able to purchase and conceal such a large woofer. The drivers they use for earthquake and sonic boom simulations are motor-driven baffles in a transmission line enclosure roughly the size of a garbage truck on end. An exponential horn to focus this energy would have to be HUGE. Your car stereo might create an annoying boom in the 40-60Hz range, but subwoofers this size produce no appreciable output in the infrasonic house-shaking range.

The high-frequency noise sounds like a probably explanation for the human symptoms, but not the house-shaking. Frequencies just at or above the upper limit of human hearing (above 20kHz), can be heard if you move your head quickly (turn your head). The doppler shift and phase-difference between what each ear is hearing can be percieved, even if the sound cannot be heard clearly. It is a weird sensation.

No matter what the cause, you should have it documented. If this is a serious problem, you should have it investigated by someone with the proper wide-band audio measurement equipment. With a high-quality microphone and spectrum analyzer (or just an o-scope), high dB sounds can be easily detected, and the source pin-pointed.

How so? Do YOU know the facts? Seems we only hear rumors on this NG.

> > agree about the Clinton bit: for him
> the 70's was staying out of the military.

Yes. many opposed Vietnam. They have been proven correct. No dominos. Not Red or Dead. Ask Bobby MacNamara. Read. Try and learn beyond your brainwashing.

> I guess he's getting even.

Guess you are a Republican that can't face its party sucks worse than the Democrats.

Didn't Bill brag on his WWW page about the ability to receive MDT?
Didn't he send (5 times) software to decode MDT with the data slicers he sold to the Feds?
Why hasn't Opto been attacked by the Feds? Must have paid off Clinton, right?

can you answer real questions?

2304. For Sale Cobra 2000 Excellent Condition

Newsgroup: rec.radio.scanner
Date: 1999-05-22 00:00:00 UTC
From: Sam Wolinsky <pcmedicnj@yahoo.com>
Message-ID: <7i6le8qg1@fir.prod.itd.earthlink.net>

Hi all. I have for sale 1 Cobra 2000 base station CB with the speaker. Radio has been modified to cover from 26.815 Mhz to 28.045 Mhz. Radio transmits 20+ watts, clarifier has been opened. I have received several reports of good signal/audio from stations that are 30+ miles away from me. I am not real technical so beyond what I have told you, I don't know anything else about the radio.
I would rate this radio as an 8 out of 10. No scratches ect that I was able to find. Also included is the original manual, original 1 year warranty certificate, copy of service manual.
From what I have seen and heard, the 2000 is one of the top of the line most sought after radios that was ever on the market in its day. After using it for a brief time, I could see why as it is an excellent radio.
Price is $275+ shipping costs, prepaid via USPS money order. References available upon request.
Please contact me at jces9033@hotmail. com if you are interested in this fine rig.

If you're going to be pedantic at least check your facts first.
Monochrome - (of, using or being) reproduction or execution in 1 colour,
black and white, or shades of grey.
And technically speaking, black and white, being the absorbtion or reflection
of the whole spectrum, are not colours.

I give my second to Adam. He's got the right answer on this one. If
you look at the path loss equations alone for that frequency and
distance, the required power to vibrate the house infrasonically would
be colossal.

The DEA would probably break his door down without warning at three in
the morning thinking that he was growing marijuana because his
electric bill would be so large.

2307. PC Radio Comparison (long)

Newsgroup: rec.radio.scanner
Date: 1999-05-22 00:00:00 UTC
From: dcisive@earthlink.net
Message-ID: <MPG.11b08b3cff3914129897ad@news.earthlink.net>
Source record: 118029

Well, now I have gone and done it. I assembled several friends and their gear and compared units on HF and VHF-UHF and here is the short results. The following radios were used. (1)WinRadio WR1500e, (2) Icom PCR-1000, (3) TenTec RX-320, (4) Optoelectronics Optocom.....A trapped dipole on the roof was used for HF and a Monitenna (my favorite) was used for the vhf-uhf..Without the benefit of actual electronic diagnostic gear on hand we all based the results on a 1 to 10 scale. Our benchmark for HF was the Drake R8B... The RX-320 was a 9, the PCR1000 was a 5 and the WinRadio a 3. The RX-320 had a totally quiet noise floor while the PCR-1000 was quite noisy and the WinRadio was nearly intolerable. We even grounded both the PCR-1000 and the WinRadio to a proper metal drain pipe outside to not much benefit. To my great surprise the Optocom totally commanded on the vhf-uhf arena. It actually picked up some distant railroad communications that the other WinRadio and PCR-1000 didn't even hear. The WinRadio had an annoying squelch tail I couldn't get rid of, but otherwise had acceptable performance. We all agreed that the WinRadio was a bit better in sensitivity across the board than the PCR-1000, but no match for the Optocom. Certainly the WinRadio beats the PCR-1000 in raw sensitivity and didn't seem as bothered by intermod as the Icom. The Optocom was virtually "Immune" to any intermod and as I checked the scan range of 30-1000mhz, the Optocom only picked up ONE pager image (which is pretty incredible here in the Salt Lake Valley) as we call it RF HELL here. The WinRadio was plagued by intermod in the 40-50mhz, 450-490mhz and 900-950mhz range. The Icom was even worse off then this and in the 450-490mhz range was nearly intolerable. As we have done before, comparing the R8B with the RX-320 was a big surprise. While one would expect the Drake to run all over the TenTec, "it didn't". Anything the Drake heard, so did the TenTec and for that matter if the TenTec was set to use the sideband, it's stability allowed for a dead lock on a cleaner signal also rivaling the sync detector used in the Drake. Believe me, I have always revered the Drake and will continue to do so, but one must consider the amazing value in the TenTec with it's greater filter choices and increasing selection of software available. For it's price it is a no brainer of a choice. For Vhf-Uhf, clearly the Optocom RULES with no real comparison whatsoever. It is leagues beyond the WR-1500e or the PCR-1000. For some, that may not mean anything so I suppose folks will do what they will. I just couldn't resist doing this comparison with my friends and it certainly did provide some surprises. Take it for what it is worth and just enjoy the hobby.

This is my question. Is there any radio that can transmit whether it has to be modified or not on all frequencies. i.e. 1000Hz to 2Gig. I am pretty sure there is not, in that case would you recommend a radio that you know of that lets you transmit on most of the band or just that radio that you know transmits the most. Hope you understand what I am trying to say... Thanks in advance

Anyone trying to tell me that this is illegal... I DON'T CARE neither should you what I do is my business don't get involved in my life LOSER

Thanks..

Robert

I used to see the center of the N connectors splayed open where users
attempted to install a PL-259 into the N connector. This is a very
common problem on the Icom R-7000 and seen in Icom's service center
very often. Look at the N connector and make sure the center is not
opened where it would not be touching the center pin.

I use the database in works 4.0 also..setting up the database couldn't be simpler and sorting the frequencies is easy because it offers several sort options. I can sort by location, service, frequency or any other name you give your fields. If you already have works I can't imagine why anyone would invest in another database.

Doesn't works have a limit on the number of rows ? I know Excel dies
at 65,000 or so rows, Access has a many more rows than that ... what
is the limitation on works ?

And yes, I have more than 65,000 freqs before anyone says "why would
that be a problem" :-)

Yes, this is undoubtedly the same John T Ward who works at Uniden, and was instrumental in getting the latest round of restrictions slapped on us .
Have you read the text of the latest Anti - Scanner Bill ? He is mentioned prominently in it. Maybe you should read that.

This is hardly news, it has been posted at least 20 times, and there are at least three web sites I can think of where you can read it as well.

Why would that frequency be illegal? The base side of a cell phone
frequency, in the States is between 869.0000 to 8944.0000 Megacycles.
Now, the interesting thing is that alot of the older TV sets could tune
past channel 69, well guess what folks. That means that those TV sets
couls tune in these calls even though the sets were designed to recieve
the audio frequency of the TV station even though the frequency of a TV
station signal is much wider

As far as I know, here in the States, Wide Frequency Modulation is used
for Television and F.M. radio. Although since the the goverment
mandated that all the old tv stations sign off of the air by 2006 so
that everybody switches to High Defition TV; I do not know if they will
use WFM. I wonder if the TV industry paid Congress to lobby for this
piece of stupid legislation

Another common problem is where people don't put the N male connector
together properly and have the center pin sticking too far out from the
shell. This also results in damage to the center of the female connector.If
the contacts break off, this can result in a small "air gap attenuator."

In article <37461b7d.623178@news.cmc.net>, gfiber@news.cmc.net wrote:

Gawd.

WFM (Wide FM) is used by FM radio broadcasters and Television broadcasters, because it takes more bandwidth to transmit high - fidelity audio.It is much wider than NFM (NARROW FM), which is about 5 KHZ wide, since it only has to accomodate voice and Data signals.

Tomorrow, we learn how to turn on the power switch.

I never said it was case progress, I simply said it was a possibility that he must face.

What prompted you to mis-understand that when every one else did
understand correctly?

> Jeff Palmer
>
> I had the same problem. The buzz from the audio amp in your scanner is just loud enough to set the record in motion. I had a crappy set of head phones lying around with a removeable cord that has an in line volume control and an 1/8 inch plug at each end. I plug one end of the cord in to the scanner and the other in to my VOR. Set the volume on the scanner to about half way and then adust the inline volume control on the cord just low enough so that the recorder does not go off when there is no signal present. Works pretty well. I checked the Rat Shack catologue and noticed that they sell a headphone volume control cord for $5 that should do the same thing.

2355. For Sale Cobra 2000 Excellent Condition

Newsgroup: rec.radio.scanner
Date: 1999-05-23 00:00:00 UTC
From: Sam Wolinsky <pcmedicnj@yahoo.com>
Message-ID: <7i9ro8$7mu$1@birch.prod.itd.earthlink.net>
Source record: 117805
Cross-posted to: alt.radio.scanner,rec.radio.cb,rec.radio.scanner,rec.radio.swap

Hi all. I have for sale 1 Cobra 2000 base station CB with the speaker. Radio has been modified to cover from 26.815 Mhz to 28.045 Mhz. Radio transmits 20+ watts, clarifier has been opened. I have received several reports of good signal/audio from stations that are 30+ miles away from me. I am not real technical so beyond what I have told you, I don't know anything else about the radio.
I would rate this radio as an 8 out of 10. No scratches ect that I was able to find. Also included is the original manual, original 1 year warranty certificate, copy of service manual.
From what I have seen and heard, the 2000 is one of the top of the line most sought after radios that was ever on the market in its day. After using it for a brief time, I could see why as it is an excellent radio.
Price is $275+ shipping costs, prepaid via USPS money order. References available upon request.
Please contact me at jces9033@hotmail. com if you are interested in this fine rig.

I've had a difficult time finding sources of detailed
info on this radio. The best place for info so far
has been this link:

http://www.advdig.com/bc245.html

They also seem to have the best price on it. It is expected
to be available for shipping early July '99. I don't have any
affiliation with this company and haven't ordered anything
from them yet. I have heard (rumors) that there will be
a base version of this radio also (just about guarantee that).

Hi, as an electronics instructor in a local high school I've seen and operated MANY Tesla coils, some were magnificent...others, well not so good. They are a premier noise source! As far as erasing magnetic media, I've not seen that or even heard of it so I doubt it's so...nonetheless they really crank out the voltage and the EMF to match. Build one and find out!

No, actually it's not legal to listen to, be it actual frequency or an
image. Even if your scanner can receive cell freqs it's still not legal.

2361. Re: 154.8300 no longer HotShot LAPD?

Newsgroup: rec.radio.scanner
Date: 1999-05-23 00:00:00 UTC
From: Richard W Cowgill <lakers34@netscape.net>
Message-ID: <01bea508$f6c0bb60$19d6b3d1@default>
Source record: 117811

Desdave...

No..you're pretty much on the money....technically, per our manual, HOTSHOTS are considered priority one calls which are given a code of "2 High or above" (only thing left is code 3 obviously) - They are indeed in progress calls (we like to keep 'em to felonies) and certainly any call posing a threat to life such as a very bad traffic collision etc. Pursuits, assistances, help calls and the like are considered "officer emergencies" but are broadcasted pretty much the same way hotshots are which I've explained below.

Priority one calls go out on area group selects, along with tac 1 and the new Air/K-9 freq. (484.7125). Group select is a term that deals with which frequencies a call will go out on depending on the division it's happening in. For example, if a priority one call is going out on Southwest Division's group select, that would mean it would also be put out on Wilshire/Pacific, Rampart/Northeast - Central/CTD, West L.A./WTD, Newton/Hollenbeck, and 77th (most of the basin!). This is done because at least one of the divisions on the above freqs touches Southwest Division which borders the 10 fwy on the north, Vernon Ave. on the south, Figueroa on the east, and La Cienega to the west. On the other hand, if a priority one, or "hotshot" call goes out on West Valley, it would only be group selected on Van Nuys, and Devonshire/VTD since only those areas touch it.

Hope this helps..

Rich Cowgill

Found this on the net today......

----------start----------

Also, early internet reports, from many on the newsgroups, state that
John Mackey's mother may turn to give evidence & act as a witness
against him in the recent accusations about John Mackey falsifying
VE test scores in exchange for money from applicants.

----------end----------

Anybody know about this?

I know John has made many false claims about many things but do you believe
he would really take money to pass people?

John has lied on the net about his license status and other things but would
he stoop this low?

What's the story???

Funny that you mention people looking down on General class as this is what the majority of HAM's are.
I never want to be anything more than General Class.
My friend is an Extra Class and he has not used Morse code in over 15 years and he thinks coders are a bunch of idiots in this modern day and age.
He doesn't look down on anyone except people who want to be HAM's but never make an effort at all.

No way dude!
Drop the code because it is obsolete, but not the classes!
I do think that the classes need to be redone though.
Tech classes are fine, Novice should be dropped, General
is fine but the Advances and Extra classes need more incentive (as if I were
to ever become and Advanced or Extra).
As a general class, I have no reason to me (other than the honor) to go through the
hell to become an advanced or Extra for the little freq's and extra rights offered.

I think he is going to keep advertising it until he gets the idea he is
asking way too much for a "chicken band" radio that hasn't been produced
for several years.

Most recently was to be shipped in July, but rumor has it possibly not until
Sept/Oct.
Next scanner to be introduced with TrunkTracker2 is allegedly the
replacement to the old 760XLT and at one point was to be named the 780XLT.
Who knows for sure.
760XLT

I was just curious. Since we have the Trunk Tracker, here in the
States, is there a Tetra Tracker for other parts of the world?
Although I fail to see way they put the word Dolphin in the name.

Bill Cheek and Keith Knipschild Arrested

April 2, 1999

John T. Ward posted an article on USENET about the following article which appeared in
the Friday, April 2 issue of NY Newsday newspaper, page A31.

Feds: Man Eavesdropped on Police / Agents say he posted cops' info on Web site

By Hugo Kugiya. STAFF WRITER

The U.S. Secret Service and Nassau County police arrested an unemployed electronics
enthusiast from Kings Park after he intentionally intercepted communication sent and
received by the mobile data terminals installed in police cruisers, federal agents said.

Keith Knipschild, a former NYNEX employee, was arrested Wednesday in his home at 29
Amapola Lane for intercepting information and posting some of it on his Web site, http://www.knip.com, agents said. Police use mobile data terminals to check for outstanding warrants, review driving records and to send emergency information they might not want to broadcast across police scanners, such as details of an ongoing surveillance or a planned
search.

An affidavit from a federal agent found that Knipschild's Web site had 93 pages of
police transmissions from March 12, which included criminal histories and warrants,
motor-vehicle checks, medical information about victims, and witness statements. Nassau
police confirmed the information was transmitted by police on that day. Investigators say
a confidential source led them to Knipschild, who could not be reached for comment yesterday.

Federal investigators said three satellite dishes, ranging in size from 18 inches to
12 feet in diameter, as well as a 40-foot radio tower were discovered on Knipschild's property. Calls to federal authorities

seeking comment were not returned yesterday. Details about the disposition of the case were not available.

Federal documents indicate Knipschild's Web site includes information of interest to electronic enthusiasts, with links to Web sites about scanners, satellites and dishes, and amateur radio.

Federal investigators said Knipschild used an illegal electronic device to intercept police communications. In a related case, the Secret Service have arrested a San Diego couple, Bill and Cindy Cheek, on a New York warrant charging they sold such illegal devices on the Internet to intercept police communications. The Secret Service said one of its undercover agents purchased a device from the Cheeks, who shipped it to New York. Details were not readily available yesterday.

Mobile data terminals send and receive information by radio frequencies, which are encoded into a digital or binary format, one that is not available to the public. Furthermore, these terminals are password-protected.

The law dates back to 1986. It is called The Electronic Communications
Privacy Act of 1986, which was passed through Congress thanks to the
Cell phone lobbiests. Hey as long as people use Cell phones to make
drug deals; I guess that it is okay, huh One radio device is frowned on
and the other isn't

Does anyone happen to know the IC # or ID and pin out for a discriminator tap for the Relm 200? My local scanner store does but is reluctant to tell me as they want $50 to do it for me. Opened mine up but could not find any of the chips from the well known list on the PCB.

Without sounding patronising the bands (and the sets) of which you
speak are intended for radio hams, to use it you first need to pass a
test and apply for a license / callsign, the course that leads up to
this is always good fun and you get to learn a bit more about radio
communications..

>> I have seen some ot these in the Dick Smith catalog and they look like cool
>> little gizmos.. but who uses them and what can you do with them?
Radio amateurs use them for talking (usually) fairly locally (these
bands are more or less limited to LOS) however under certain
circumstances you can talk a little further afield, many of the sets
have an extended recieve with similar coverage to a scanner (vhf/uhf
two way radio etc..)

>> Any info on this subject would be much appreciated. Thanks!
I hope this helps you

Hi,

I'm wondering if scanner listening is permitted in Spain. I would like to
bring my Yupiteru MVT-9000 this summer while visiting Spain.

Thanks for your time.

Get a (professional) measuring transmitter wich covers the range you want and
wich gives you all the types of modulation you need and add some
frequency-range-specific power-up modules to get the HF-power you need.
Have a look at Rhode&Schwarz for example.....

If you can afford the money to buy this expensive equipment:
-DON'T ASK -- JUST DO IT !!

Robert,
The answer is no mfr...but natural and un-natural electrical NOISE is by it's nature, broadband. Have you ever used one of those cheap adjustable light switches next to your TV? You'd SWEAR it was a perfect broadband noise source! Since transmission of this type of signal would require a rather bizarre antenna structure (!) even the CIA MIGHT have found this technique interesting in certain situations, I don't know what would carry the antenna if it was mobile! A Tesla coil COULD be broadband enough if constructed to do that particular job...but I wouldn't want to be around one. Maybe in the surplus pile at the Groom Lake facility...8-)
Hope this little dissertation helped.
friend,
Lute

2402. Re: Emergency Monitoring-Why not built-in monitors?

Newsgroup: rec.radio.scanner
Date: 1999-05-23 00:00:00 UTC
From: Kenneth Allan Mitchell <nokones@ix.netcom.com>
Message-ID: <37480EAF.AC121FCC@ix.netcom.com>
Source record: 117852
Cross-posted to: alt.radio.family,rec.radio.cb,rec.radio.scanner,alt.radio.scanner

The point I'm trying to say is that the channel designation/identifier should be common for emergencies like 911 on the telephone system. I know the frequency for each radio is totally different, so what. I'm not trying to say that a CB ch. 9 be able to monitor/communicate with FRS Ch. 9

For an example, if a lost hiker had an FRS radio and if Search and Rescure and/or airborne law enforcement aircraft were on the hunt for the hiker they can dial in that commom known channel/pl in their radios. Aircraft law enforcement radios are user programmable on the fly. An establish procedure for hikers or campers carrying an FRS radio channel may help facilitate the location of a lost party.

So what that a GMRS user can't, at least legally, tranmsit on the 467.XXXX FRS channel freqs. How many GMRS users do Search and Rescue? Or even want to monitor like react CB Ch. 9?. I'm think a long the lines of law enforcement and search and rescue entities to use for lost parties lost in the woods etc.

Why limit a channel designation such as FRS channel 9 as an emergency channel. The number "9" "99" or the number "9" associated with "11" usually signify's emergency in the public safety world. Channel 5, 6, etc. dosen't mean anything and would be easier to remember during a crisis.

The term 'DX' was originated by amateur radio ops.Others use it to
mean different things.The original meaning of DX is to make contact
with a station in another country.This is required to qualify for any
of the ARRL DX awards that many Hams persue.You can call a dog a cat
if you wish...it dosnt change the fact that its still a dog....:>)

The LifeFlight helicopters around Cleveland use a radio called something like FlexCom, FlexiCom, VariCom, MultiCom, I forget exactly what it's called. Whether a brand name or just a slang term the give it, I am not sure. In any case, LifeFlight has the requirement to talk to lots of different police, fire, and EMS organizations in all different cities and counties in Ohio and surrounding states as they come within range of an accident scene or hospital or helipad and need to talk directly with the people on the ground. Therefore this radio allows them to dial up just about any frequency in the public service bands, including PL codes, except trunked public services on 800MHz. It's effectiveness must be a compromise because of the requirement to have decent impedence matching with probably a single antenna on the aircraft, given the size/weight requirements.

Anyone else heard same?

I'll defer responding directly to your last paragraph since it seems you have already been severely flamed for it, plus you did explain yourself and apologized in one of your followups.

2412. Re: AR8000 vs. MVT-9000

Newsgroup: rec.radio.scanner
Date: 1999-05-23 00:00:00 UTC
From: dcisive@earthlink.net
Message-ID: <MPG.11b1d98b1933f4629897ae@news.earthlink.net>
Source record: 117862

The MVT-9000 (preferably the Bandercom modified MVT-9000m2.4) has a faster scan rate, better bandscope, better build quality and is more sensitive to weak signals then the 8200. The 8200 is stuffed with more bells and whistles but for serious scanning use the 9000 wins hands down. I have used both and I sold the 8200 for the above reasons.

I have for sale a great aviation handheld you might be interested in.
It is a Narco Avionics NT-830 handheld NAV/COM transceiver. 720 COM channels from 118.000 to 135.975 MHz and a 200 channel NAV receiver covering 108 to 117.95 MHz. BNC antenna, nominal 2 watts out. 10 memories, direct entry keypad. 2 NiCad battery packs, 1 quick charge hand stand charger, 1 wall charger and an excellent manual. This unit works very well and is very rugged. It has been on many airplane flights. Nothing broken but I list the condition as "good." $250 shipped lower 48.

As far as I know around here, cellular is Narrow FM.

As Eric stated, some AM/FM radio stations have remote links, which use 900 MHz frequencies and WFM. So that's another use of WFM I forgot to mention before.

Hello All,

Just a reminder.
The Atlanta HamFest and Computer Show is coming soon.
visit http://www.saf.com/arc/atlfest.htm for more details
This will be the 71st Hamfest for the Atlanta Radio Club,they have
been doing this since about 1928,one of the oldest hamfest in the
Southeast.

All kinds of radio equipment can be found at this Hamfest.
Scanners(old and New),Shortwave,Amateur,Military,aircraft,Test
gear,parts,wire,cables,Tools.Audio,and Video equipment.All kinds of
computers(new,used,parts,supplies,components,
motherboards,modems,case,memory,monitors.Books about all
radio,computer,and electronic subjects.Way too much stuff
to try and list.You will have to see it to beleive it.

June 5th and 6th 9:00am-5:00pm Sat and 9:00am-3:00pm Sun.
The location is at the 116 Acre Jim Miller Park, Marietta, GA.
This is on Callaway Rd. This is very near the junction
of I-75 and the I-285 loop around Atlanta.This junction is on the
west side of the I-285 loop .Just north of this junction on I-75 is
exit 110.Take exit 110(Wendy Hill Rd.) and go West.Travel a few miles
to Austell Rd. and turn left on it.Go a short distance to Callaway and
turn right on it.A short distance on Callaway Rd will take you to the
Jim Miller Park on your right.Hope to see you and your friends there.
Tickets are just 5$
The event is being put on by volunteers from the following clubs,and
other sources also.
The Atlanta Radio Club
Gwinnett Amateur Radio Society
Kennehoochee Amateur Radio Club
North Fulton Amateur Radio League

We will offer all of the following:
Large Tail gate area
Lots of free parking
20,000 square feet Indoor Market
37,000 square feet Outside Covered Show Ring for Flea Market
RV Camping full hookup for 44 lucky Hams
Cash Vouchers and other prizes

This is also the ARRL's Georgia State Convention!!
Talk-in will be on 146.82Mhz - offset. Tis repeater is located on the
NationsBank building in downtown Atlanta and has a great coverage of
the Metro Atlanta area.

For additional information contact one of the co-chairmen:
Ben Dasher, KE4YZX, 404-869-6959, bendasher@mindspring.com
Charles Golsen, N4TZM, 404-252-3303, cgolsen@atlanta.com

Be seeing you there,
Dean, KR4IU

Brad -

I just bought a freq disk from Mobile Radio Resources two weeks ago...Bob Kelty has had GREAT products for years. Includes input & output freqs & PL's, unit numbering systems, transmitter sites...the works. IMHO the best directories out for Calif police/fire/govment/EMS scanning. Don't see anything listed for Nevada on his 5/1 price schedule though.

His current "Government Radio Systems" products include a number of regional printed directories for Calif - Golden Gate Region, Central Coast, North Coast, Sacto Valley, San Joaquin Valley, Southland (LA & Orange Cos), Inland-Border, CA State Agencies, "Golden Gate Industry Radio Systems," Military Radio Systems, CA Trunked Radio Systems

On floppy in WP he has about the same stuff, plus Federal Radio Systems - Calif.

The printed versions run between $12 - $18; on disk they vary from $15-$25, and up to $150 for the "Statewide 58 counties"

He also sells some Antenex & Diamond antennas.

NO email or web site, but FAX is 408-269-5811; he can also receive INCOMING FAXES ONLY at kelty@tcomeng.com

(I have no connection with him...just a long-time customer/contributor).

This is exactly correct. Code should be eliminated, and there should be
ONE
class of license. The the elitist attitude will be the death of ham
radio.
It is very unfortunate.

You really should READ this stuff before you reply to it.

He points out - correctly - that it is illegal (in the USA) "to modify your scanner to monitor cell calls". As of 1999, individuals may no longer lawfully modify their own personal scanners to monitor cellular frequencies. Practically unenforceable, but it is the law.

I've heard some cool stuff about Tesla coils, how they can erase
computer disks in over a block's radius, and other wierd stuff. Is
that true? What else have you heard?

200 channel 30-54, 108-174, 380-512, 806-960 MHz. has nicads, wall charger, looks and works great. Original owner. Was used for tracking down RFI problems - now is excess equipment. Make reasonable offer.

"Monochrome" refers to the CRT having a single electron-beam gun and
a single-color phosphor on the CRT's screen.

Mono = single.

Depending upon the CRT's grid voltage, the beam+phosphor can create dozens
and dozens shades of grey.

Hi All,

I'm in the market for a 800mhz directional yagi and am deciding
between the following brands:

Larsen, Comtelco, Antenex, and Cushcraft

Any recommendations as to the 'best' brand? Please post replies to
the group, no e-mail..

Thanks!!

I HEARD THIS !!!!!!!!
The RADIO SHACK officials and designers they rush in the theaters to
watch
the STAR WAR movie.After the movie they all site on the table and they
try to
designer a scanner like the one those Captain's have on the movie.
The scanner will be very small (Like Rolex watch)and they will cover
the all
spectrum!!!!!!!
Also there is no duke or external antenna ,and no buttons .
To program the scanner is very simple ,just talk to the scanner and
automatically tune the frequency or any other function .
Also the scanner speaks 10 different language,play CD'S and MP3
,unlimited
channels and banks,
say time and date when you ask,hear the spaceship millions miles
away,or any
broadcast from anywhere in the universe.
Also they say (RS Officials)the sensitivity will be so good you can hear
baby
monitor IN TEXAS FROM CANADA !!!!!!!
There is more and more futures i can't list here now
!!!! S O R R Y N O C E L L U L A R !!!!!!
They will be on the market sometimes on the year 2000
So what do you thing ????
P.S.
They haven't set the price yet ??,but my good sources tall me about
$289.00
- $399.99 + tax

No, when a law is broken it is everyone's business. If you don't want
people getting involved with your life (police, FCC, ect) than it would be
to your advantage to stay within the law.

> I had the feeling that some goofball was going to tell him it was illegal and not tell him the answer to his question.

Luckily, the answer to his question is no, so it isn't necessary to tell him it's seriously illegal. (not to mention that, if he starts transmitting in one of the amateur bands, one of the frequencies used by my employer, or one of the frequencies used by the Cheatham Co. Sheriff or Pleasant View FD, it rapidly becomes my business!)

Since there is no legitimate market for such a device, there are no power amp devices made that cover that much spectrum. In any case, providing effective bypassing and impedance matching over that wide a range would be expensive to impossible.

I suppose providing multiple power amps and switching between them would work. It would be very expensive, and again since there's no legitimate market (and very little illegitimate market) there's nobody making it.

>donrm@sr.hp.com

Depending where you are sitting, that's enough signal to get to the antenna of an aircraft com and open the squelch. At the very least, it would be irritating to the drivers.

I service General Aviation avionics. A signal at -65dbm from my test set is quite often strong enough to operate the aircraft nav receivers.

I know this because one of the tests I perform is a check on threshhold (nav flag) sensitivity and a comparison of the relative sensitivity of both Nav receivers.

The problem arises: Whilst we may feel that our scanners and ht's are safe, none of us has actually tested 'every' variable and could testify that 'it wasn't me' in front of the Coroner.

I use an IC R10 daily as a test receiver, have flown with it and used it in flight. BUT, the modern airliner has at least 3x 760 channel VHF coms, 2x 400 channel VHF Nav receivers, a couple of 75MHz marker receivers, a couple of 330 MHz Glideslope receivers, a couple of 200-1800khz receivers, a 9.45GHz receiver, a couple or three 4-5GHz receivers (rad alt and MLS) and perhaps a couple of 1575MHz GPs receivers.

These receivers DO interfere with each other occasionally, shortly followed by a manufacturers bulletin on how to prevent it. The manufacturers know what gear they expect to operate with and Local Oscillator frequencies are carefully chosen to prevent this.

The scanner or Ht is a wildcard. I'll bet none of you can tell me, off the top of your head, what frequency the LO is on when listening to your favourite Police frequency, for example. Remember that whilst scanning, the LO is hopping about or slewing about all over the spectrum.

You could, of course, go up the front and ask the pilot if you could use the radio, do a check on his coms and see that there's no interference, but in Departing Sydney airport, there are no fewer than 8 frequency changes required. Did you check them all?

Well around here there is a $190 fine if we are caught using a hand held mobile phone whilst driving. Hands free Car kits sell very well. We also have a very high percentage of mobile phone users. This year number of mobile voice calls made will exceed the fixed phone network.

And what indication prompted you to post *that* assertion?

All things *may* come to pass. Aliens may transport Federal Officials investigating this case to an orbit around Pluto. That may not happen, but you can't completely rule it out.

This is a simple FACT!

But posting a wild assertion such as yours, without any evidence is downright mean. And you *know* it.

'Cause wild speculations make you look stupid. (And trust me: You really don't need any help in that department.)

What evidence prompted you to spew that distasteful guess at the case's progress?

You friggin' loon.

2457. TrakkStar Questions

Hello Trakkstar/OptoTrakker/OS456 Users,

I am using TrakkStar V7.33 with my PRO-2006/OS456/Opto Trakker combination. The system decodes tones OK but is having problems following trunked systems. Here are my observations:

- TrakkStar does not follow talkgroups very well. Sometimes it works, sometimes it does not work. My local trunked system is a Type 2 with 14 channels.

- When Trakkstar does find a talkgroup, it may loose the talkgroup in the middle of a transmission.

- I have a S-Meter installed on the PRO-2006. It is continuously activated when TrakkStar is scanning.

Questions:

- Can anyone recommend parameters that they have used successfully for TrakkStar?

- How do you set parameters in TrakkStar for a Hybrid system?

- What other trunking software do you recommend for my setup? I also run Probe V4.0 and it works great on conventional scanning.

Thanks for any help.....

Jim

I was always sort of put off by the "Realistic" label on their
equipment. It always seemed to me that compared to the REAL scanners
(Bearcat, Regency, Sonar in the old days) that the RS designation
"Realistic" meant just that--something passing for a scanner that just
did not measure up. It wasn't the real thing, just something appearing
"realistic". I will say that their later products certainly were
competitive with most other manufacturers, and they proved their
equipment was the real thing...bk

Robert,

I have never heard of such a radio transmitter - there is no reason for
one to exist. Radio transmitters are much easier to make if they only have
to cover one band of the spectrum.

That said, there are devices that do what you wish - only they aren't
called transmitters. They are called RF signal generators, and good ones
are expensive. There are also broadband amplifiers that go up to hundreds
of watts over such a frequency range - but they aren't cheap either.

You can expect to pay three to ten thousand dollars for such a setup. Look
for Tucker or Naptech etc. on the web - these are used RF test equipment
dealers. The most common equipment is made by Hewlett Packard (generators)
and Amplifier Research (amps).

Also keep foremost in your mind that if you use such a device to interfere
with aircraft radio signals, you could kill people. So please don't do
anything so rash. And I'm not a 'loser', I'm just an ordinary person who
cares about others.

i probably dont have any buisness answering because this is the first time i have ever read this group, however..... i have a home built T2FD antenna cut for low band and i am very happy with it. i used plastic window glass to fabricate the spredders and a 75 ohm to 300 ohm cable tv balun to match the coax to the antenna. it is a tilted (to get an omni pattern), terminated (has a resistor at the center-point), folded dipole. = T2FD. works great, wide band coverage, simple to build, relatively cheap parts. it is far superior to my commercialy made ground-plane antenna. search the web for T2FD ANTENNA, especially look at the nordic shortwave center for their info on building this antenna. i have about $20 in mine and about 2 hours work. try it, it will work.

2478. icom r7100 instructions

Hi,
I have an Icom R7100 that just came out of storage, I cant find the instructions, and can't rememeber the basics. Does anybody have the basics for programming the R7100? (yeah I know, enter freq into a channel)

Roger

>

R E A L I T Y C H E C K ! ! ! ! ! ! ! !

Definitive data on the posting history of Toilet Boy (aka Mackey). Edited for the more salient point(s). Compelling nonetheless. This is data from last year, we can only speculate just how much more bandwidth the friggin loon has wasted since.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0
TOTALS	2139	2348	201	203	275	266	341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts

made by Bill Cheek were devoted to scanners and scanning. Now go back
and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX.
We do not believe this to be a coincidence ....

A Mobile Phone or transmitter can certainly spark an explosion around flammable fuels and gases.
Ask your nearest service station console operator.One of their biggest headaches is customers filling up while on their mobile.
Not only is it dangerous ,it is also illegal.Telstra know this but do not make much of an effort to tell the public.

I am with the Volunteer Fire department in my area. I am looking for a cheap, maybe even homemade, antenna to work on low band (46.06mhz). I would also like to be able to hear high band frequences (458.385mhz). The antenna would have to work in my attic. Also, what kind of pre-amp would you reccomend?

Thanks in advance

Eric Oppegaard

How silly would it be if other hobbies like Painting or woodworking
would have certain special classes or groups in which some people could
only use limited paints or types of wood then other people in the hobby?

ONE CLASS of HAM LICENSE is enough!

What a silly argument!
Using a washboard is the second-most used method of washing clothes
after a washing machine, so lets require people to use washboards before
they are allowed to use a washing machine.

The Comet GP-15 would be an excellent choice but it costs $155 from AES. You could use a discone which would be okay but the GP-15 would give you much more gain, especially in the 460 Mhz range. It would be weak in the 800 Mhz region and maybe not too good in the 220 Mhz range. Look at some ANLI (Premier) or Lake tri band antennas, they are usually quite a bit cheaper than Comet or Diamond. For these two specific freqs, it would be better to have two antennas, each cut for the freq you want to listen to. For instance, a quarter wave antenna, 5 feet 1 inch would be perfect for 46 Mhz. Should be easy to make for a few bucks.

I looked at the RadioShack 2-meter handie-talkie today and it seems to be a pretty good radio. Very good sound quality, reasonable power for its size, and sturdy construction. However, at $179.99 it is priced pretty high compared with its competition. Perhaps when it goes on sale (and we all know it will) it might be a good deal. I hope they come out with a radio similar to this that is a dual band. I'd be more interested then.

2508. New mailing list for northern NJ

For those of you interested in scanning in the northern New Jersey area, I've created a new mailing list on Onelist. Here's the "about" message from the list:

"This list is for anyone interested in listing to police, fire and similar frequencies (scanning) in the northern New Jersey area (primarily Bergen County). Please use this list to share not only frequencies of interest, but also to serve as a notification list for "in progress" events such as working fires, chases, etc. Please do NOT use this list to discuss anything illegal, such as monitoring cell frequencies."

To sign up, click here: http://www.onelist.com/subscribe/nnj-scan

Hmmmm... how convenient for Uncle Sam. Laws have to be voted on, but the FCC can adopt new reg's at will, which when violated, hold the same or worse penalties. Nice touch.

Like JT says, if voting mattered it would be illegal.

ok, now a dumb question, how do I make my own antenna? It would be for a base station.

Norel Mitchlief wrote:

You had to ask..... Oh well. I'd hate for someone to think that a former football star is behind this crap, so here it is:

The Definition:
That's the wrong John Mackey. This one's only claim to fame is being the top off-topic poster on usenet with thousands of off-topic messages across several different newsgroups in his short but moronic career on the internet. A dejanews search reveals all about this clown, with such famous threads as "The PERFECT defense for Bill Cheek!!!!" and "Blake Bowers CAUGHT forging & flaming AGAIN!". It is his self proclaimed mission in life, if you can imagine it, to single-handedly rid usenet of anyone who opposes his warped and twisted point of view. He will do anything to support his cause and has been caught lying, forging, cancelling messages, and creating aliases to show a false front of support. He is a living breathing self propaganda machine, and a bad one at that.

Now, our pal John will deny all or most of this, but don't be fooled. Do a dejanews search for yourself, and see the sheer number of messages this person has posted over the years. Dejanews reported back 1562 messages in rec.radio.scanner alone. By my count, John has posted about 6 or 7 on topic messages (very loosely on topic) out of that amount. The rest of them were simply insults, name calling, or sniveling denials and "prove it" posts. He thrives on replies, no matter how insulting. I think it is a subconscious need for attention that he apparently cannot receive anywhere else.

Prior to usenet, he was on a Fido echo related to scanners, but was subsequently kicked off of the echo for the same kind of behavior, which he still denies to this day. Just ask him anything, he denies all. The consummate liar's liar. To hear him tell it, he is a victim of a ruthless bunch of cyberthugs who harrass and torment him daily, but in reality he brings it all upon himself willingly. He enjoys it, of this I am convinced. The only thing more certain than his desire to disrupt is his predictable replies to any posting mentioning either himself or Bill Cheek, the subject of his apparent obsession.

John is the proverbial pot calling the kettle black. He is the person depicted in Aesops' fables, the one who only sees the small bag representing the faults of others tied in front of him and not the mammoth bag of his own faults on his back. He will take in an insult today only to use it on someone else tomorrow. He is a mirror, a virtual parrot who uses the same tactics that others use against him. He is lacking in better judgement, discretion, logic and common sense.

Sorry to post it to the non-scanner related groups, but I think it only fair that you all know the real deal about Laughing John's Flying Circus.

The Vision:

The only reason that John exists is because of the actions of others. I have in the past and still today propose a simple solution: ignore him. Once he is no longer able to disrupt the group, he will finally move on. Do not reply to him directly, and he will have no basis for his attacks. He will appear foolish and meaningless to any and all who happen to read his ramblings. Much like a small child who finds that a temper tantrum won't deliver the goods, he'll find better ways to fill his free time. No doubt he'll reply to this posting in an attempt to provoke me into a flame war, but it won't work - I would much rather discuss things related to scanning than things relating to immaturity. It is my belief that if others shared my feelings on this (and many do) that John would someday soon find that the only one listening to John Mackey is John Mackey.

And that, fellow citizens, would be music to my ears.

-Phil

I just recently got an Optocom, and I wanted to buy a PalmPilot to control it for mobile operation. In the readme.txt file that comes with the PalmPilot program it states that it has not been tested on the Palm Pilot III (Only the PalmPilot Pro). I was just wondering if anyone has any problems running this program on PalmPilot III. My second question regards the operation of this program. Will it let you change the store and scan frequencies in the radio, or will it only switch between them and decode tones? They also state in the readme.txt file that they give you the source in hopes that people will modify the program to make it better. Is there any better versions out there I can get?

Thanks for the help!

Monochrome TV is refered to as a black and white broadcast. Black
is the absence of light, and the white is a high intensity of light
given off from the CRT.

The true defination of a monochrome CRT, is one with a single gun or
channel. You can have a single gun CRT with green or orange phosphor
as in the older computer monochrome screens.

> Since when do TV station broadcast in one colo(u)r as the name

> Monochrome would imply. Heck, even Black and White is two
colo(u)rs.

"Monochrome" refers to the CRT having a single electron-beam gun and
a single-color phosphor on the CRT's screen.

Mono = single.

Depending upon the CRT's grid voltage, the beam+phosphor can create
dozens
and dozens shades of grey.

You did turn the antenna 90 deg so that the elements are vertical
instead of horizontal like a normal tv antenna is mounted. There is
no positive and negative to a TV antenna. The coax it attached to
the antenna by the matching transformer ?

Untrue. If the FCC makes a regulation that conflicts with LAW, the
regulation is invalid. Unfortunately for the "victims" of such an error,
the regulation will be enforced until/unless a Federal court prevents it.

Heck. All you need is a 5ft hunk of speaker wire hooked up to a BNC connector and you are off and running. The 5ft length is about right for the low band and will work just fine up to around 500mhz.

2534. FS: Pro-2042 w/Opto 535

If you need a computer controlled unit, the Optocom is essentially the same as a 2006 and will blow the doors off of any PCR-1000 in every conceivable respect PERIOD. There isn't even any comparison to be made. Better sensitivity, better intermod performance, better audio, faster scanning. Geez, what else do you need.....

As I recall it was not for literal source code either.

I dont recall the term they used, but in effect they meant psudo-code.

> That's my two cents. Thanks

That's nothing new...they've been doing that the past few months. The trick
to keeping one listed is to NOT make mention of the frequencies the scanner
is capable of receiving or make mention of the fact that it has been
modified to receive cell.
That advice came straight from ebay when they pulled one I had listed. I
re-listed it later using their "guidelines" and had no problems.
They really don't have a clue otherwise.

Why are selling this interface? Is there a problem with it or have you found something better.

I'm asking because I was about to purchase one from Texas2way myself.

Does the interface work with all the current software available. Do you have the DDM or the DDMP version?

Thanks.

>But it IS just a 'regulation', not a LAW! The FCC can't make laws, only
>Congress has that ability under the Constitution.

FCC makes regulations because it is empowered to do so by the Legislative Branch (Congress) of the Federal Government, which authorizes funding for the Commission and passes laws that the FCC and other Executive Branch agencies must enforce. FCC regulations are the way most communication-related laws passed by Congress are carried out. Violation of a REGULATION is ILLEGAL. You can be fined very heavily for violating "just a 'regulation'" promulgated by the FCC, with the full weight of LAW behind it.

Like I said....

I have the following Radio, and electronic equipment for sale. Will consider trades for other Electronic or computer related EQ. All working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

Non Tube Items:

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $250

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. Asis$50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both.

Bearcat 250 Scanner: Have two. One working and one for parts. $75 for both.

Kenwood MC 50 Mic: Works OK and comes complete with cable and input jack. $50

There are lots of "specialists" with their tesla-coils not understanding that
you want to KNOW if there is a transmitter wich covers the RANGE of lets say a
AOR AR 8200 wide-band-scanner (150khz - 2 Ghz) and transmits only on a specific
tuneable frequency with a specific type of modulation and (at least) at the size
(and functionality) of a handy-talk.
But you have to learn too how to explain more exactly what you want.

The key issue here is that "they" did nothing. Keith Knipshield posted MDT transcripts on HIS web site. Bill Cheek had nothing to do with this. Bill's supposed crime was selling a decoder with a four level data slicer that could - combined with the right software - be used to decode MDTs.
This raises two points.
First, since when has decoding MDTs been illegal? This appears to be a new interpretation by the government.
Second, when is the seller responsible when a product is used illegally? Do they arrest the local car dealer if someone buys a car and drives drunk? No. Do they arrest the gun shop owner if someone buys a gun and robs a store? Of course not. Why, then, should Bill (or anyone) be arrested for selling a legal device when someone else uses it illegally (assuming, of course, that decoding MDTs is illegal, which it may or my not be)? Dataslicers are NOT illegal. The Optocom has a dataslicer built in. Every Truntracker scanner has a dataslicer built in to decode the control channel.
If the government's apparent position that all digital comms are protected is allowed to stand then you can kiss goodbye any chance of ever having an ASTRO, EDACS Digital or APCO 25 Digital compatible scanner.

>
> SNIP

Why snip out the issue at hand John-bowl? You snipped;

"VE test scores in exchange for money from applicants".

Are you guilty? You don't deny it. You just snip it and it goes away?

How much money did you take? What were you asking for? How many people did
you pass through that should not have?

>
> > Anybody know about this?
> >
> > I know John has made many false claims about many things but do you
believe
>
> SNIP

Why did you snip out "he would really take money to pass people?"
John-bowl???
No denial just a snip.

You did it?

> > John has lied on the net about his license status and other things but
>
> SNIP

and then you snip out "but would he stoop this low?" don't you? Afraid
somebody might answer it again?
Did you stoop that low. You are know by most all on these NGs as a fraud
after you 5 Fcc license thing. Gee, you sure got quiet over that one.

> So Glenn WHEN have I lied ???

Last lie was saying you have 5 FCC licenses. want more.
You lied that you would quit posting when Bill did.
You lied that you didn't smoke a repeater.
You lied that you didn't smoke a power supply
You lied saying you weren't kicked off Fido by both Cheek and you BBS operator.
You lied saying you didn't spew obcenitites on the Puget Sound 523 repeater.
You lied about your bedpan changing job.
You lied about your degrees.
You lied about your changing your name constanttly to get through mail/news filters.
You are a living lie John-bowl, it is all you have.
You just lie about most everything.

>
>
> A search of yahoo & dejanews shows NO such internet reports as you claim.
>

It was posted on this NG and many others the day I posted my original message. Just because you are too dense to use the net tools availble don't blame me. I'll repost it again for you if you like John-Bowl.

> That's pretty funny!!!! My mother died 6 years ago!!!!!!!!!!!!!!!!!!

Prove it John. Hard to imagine anyone admitting to being even related to you John-Bowl.

> Once again you have proven your self to be a liar!!!!!

Because I post a question regarding another post? You haven't denied anything so it must be true.

>
> Did you ever find the young gay amateurs you were looking for to practice
> you homo acts on???
>

This last statement shows how desperate you are John-Bowl. Go troll you gay stuff elsewhere. Do you think bring up your old forged posts take the attention off your alleged VE payoff scam?

Reminds me aof a stunt we did in high school one day.
Found a table top, tube, AM/FM radio.
tuned it 10.7MHz up from a distant "educational" low power FM station
the principal used to give us "culture"(you know the type music to which I am
refferring..am before the flame wars start...I now listen to that "crap"
instead of the "really cool" "music" that I enjoyed as an ignorant teenager)

And we ran the output from a small reet to reel (pre-cassette) into the AFC loop. Sound very good and totaly "wlaked all over" the "educational" station.
And our favorites selections were Jimi Hendrix the "Star Spangle Banner" and that everfamous clasic "GD the Pusherman" from the easy rider sound track.
We drove the old gent nuts.
I just hope that any intrepid youngsters think things out a little better than we did. We never got cuaght but it was a very close miss.

Hello:

The Ramsey Kits model FM-10 will do you quite nicely for a few feet , and will likely cover the house and yard very well. It is not the greatest on the face of the earth, and there are far better ones available for a little more money, but you will have fun with it.

There are also many mods available to increase the performance in audio quality, change from stereo to mono, increase RF power ....it only runs about 7 to 10 milliwatts, and other fun stuff can be found at some of the following URL's and will get you started on the reseach phase.

I have used a few of these over time to link my CD player to the boombox in the yard. I then used it for the 2 meter, then HF....on from there.

The Ramsey kit sells for about $30.

Hope it helps out, Its a fun little project.

This link has general info, and leads into the FM-10 FAQ's section.

Guys, I have held my ticket (tech +) since 1974, I am now 60 yrs old and have attempted to upgrade to general four time in the past 10 yrs. Not being able to master the code, and with the influx of new hams into 2 mtrs and 440 I have all but lost interest in ham radio. The thoery has never been a problem but that darn code......

Last week I received an invitation to join the AARL with notice that they are promoting the Tech + to General via grandfathering them. Today, I joined the AARL only because they have opted to support this concept. I know that there numerous advanced and extra class people that do not support this but times must change. Just because I did something in my past, should I expect my juniors to follow my foot steps? NO. Open your eyes and make positive changes for your/our future. My concept of code is that it is and has been a declining art, if it's your choice to use code so be it. It just wasn't made for me. In that, so should I be restricted from using the HF bands? Why, when I know the thoery of radio electronics and the rules of the road.

Have a wonderful day.............

2583. TV Antenna for Scanner

Newsgroup: rec.radio.scanner
Date: 1999-05-24 00:00:00 UTC
From: afulle8083@aol.comnospam
Message-ID: <19990524154543.26259.00003955@ng-fx1.aol.com>
Source record: 117731

I recently read Bill Cheek's antenna FAQ. There were plans for using a TV antenna for a scanner antenna. I've tried this and I'm having some problems. The antenna I'm using consisted of two array sets. I installed the larger set and had to run a jumper wire across the two wing nuts that connected to the other smaller antenna array (which I'm not using). I'm using 50 feet of 75 ohm coax. The results have been less than impressive. Knowing the less than perfect sensitivity of my AOR AR8200, there's been little improvement in reception. Is there a positive and negative connection on an antenna? Do I need to install the smaller antenna? Do I need to 86 the whole TV antenna idea and just buy a Monitenna?
Any help and advice would surely be appreciated.
Andy

At home, I connect mine to an auxillary port of a boom box with a stereo cable from the earphone jack. In my car, I use a cassette adaptor that also plugs into the earphone jack. I have also used a powered speaker from RS, but that has its limits. If you're looking for a mod, that I don't know.

Hello to all,
I have a problem with a Uniden Bearcat 760xlt scanner. The
date of mfg is OFIF. I did the mod for the 760xlt, but there was no
change in the scanners performance!? The mod was the one where
pin 20 is disconnected from the board and reconnected to pin 19. Can
anyone help? Everything seems to be working fine on the scanner, but
no extra? I check to make sure I had the right pins and I do. If
anyone can help please e-mail me:

melg@tri-countynet.net

Thanks,
Mel

I have for sale a perfect, as new, NRD-545 DSP receiver. The radio is less than 1 year old and has the latest firmware upgrade. This is a non-blocked unit imported from England and covers 100 khz - 2 ghz. It includes the optional CHE-199 wideband converter and the CGD-197 TXCO. Includes original box and manual. $1,750. I will not ship outside the U.S.

I'm an old ham, and I'm anything but cliquish or elitist. I _do_ get
tired of folks whining about cliquish old hams instead of becoming new
hams and making some much-needed changes and contributions to the hobby.
If you ain't part of the parade, you have no right to sit on the

Yes, the illegality of LISTENING to cell calls dates back to 1986. The
regulation covering individual MODIFICATION of personally owned scanners
went into effect in 1999. I really wish people who don't understand the
issue would stop spouting incorrect information.

Zombie,

As usual boy, you got it wrong.

Zombie> Yes, this is undoubtedly the same > John T Ward who works at Uniden,

I do not now, nor have I ever worked for Uniden, Tandy or any other scanner manufacturer or dealer. My entire professional connection with the hobby radio industry has been as a writer for Monitoring Times and Popular Communications magazines.

Zombie: > and was
>instrumental in getting the latest round of >restrictions slapped on us.

I assume you mean the recent FCC rules regarding scanner image rejection standards.

Zombie:> Have you read the text of the latest Anti - Scanner Bill ? He is mentioned
>prominently in it.

The latest anti-scanner bill is H.R. 514. I am not mentioned anywhere in the bill, or in the executive summary that accompanies it.
I am mentioned in the FCC ruling as supporting increased scanner image rejection standards. This is true. However, my entire involvement consisted of writing one letter in response to the FCC Notice of Proposed Rulemaking issued last spring. In that letter I said that while I supported increased image rejection standards (I'd love to have fewer FM and TV images to contend with) I did not support the proposal to encase the radios' internal circuitry in epoxy or otherwise make it inaccessable to the user, since many skilled hobbyists like to do their own repair work.

Zombie: (regarding the reposting of the Bill
> Cheek arrest story) > This is hardly news, it
> has been posted at least 20 times, and there
> are at least three web sites I can think of
> where you can read it as well.

This much, as least is correct. Why someone chose to copy the Cheek story from Rich Wells' site and post it back to the newsgroup after all this time is beyond me. I wish people would stop copying things I write and posting them wherever they want. If I'd wanted it reposted after all this time I would've

done it myself.

Woah! When did Bill get arrested and for what?

This is news to me!

> of NGers and more will too.

The facts of the NG "rec.radio.scanner" prove you wrong!!! I
suggesteda legal defense be started for him & VERY FEW people
responded. Then
another person started a legal defense fund & AGAIN very few responded.
BTW - If you read Bill's letters he HAS asked for contributions & has
stated that he
is having to resort to a public defender becasue he has no money to
defend himself!

> try asking people to help you with
> money for your defense fund.

I have done NOTHING that needs a defense & if I had I
have the resources to defend myself!

Bud, please present your proof that I have lied or be considered a liar YOURSELF!

>reading the newsgroups, that all the equipment that was seized, except for
>one computer, was returned shortly after the arrest. He also knows that

I NEVER said equipment wasn't returned!!! I simply the fact that much equipment
had been seized. I clearly stated the facts! Are you trying to "color" the facts?

>there are NO State charges filed, and no evidence that there ever will be,

I NEVER said that state charges were filed, only that state charges MAY be filed.
Now you have stated (regarding the filing of state charges) "no evidence that there

ever will be", please present your proof of this statement or are you just
SPECULATING
with NO SUPPORTING facts???

>as the Federal charges will probably be dropped before any trial, due to the
>law saying you CAN listen to any Law Enforcement or Government freqs that
>aren't scrambled, and digital encoding is NOT encryption.

He wasn't arrested for "listening". He was arrested for selling equipment
specifically for monitoring law enforcement communications.

Please Bud, in the future be factual & accurate with your statements rather than
procuding your own version of the truth.

>
>So what that a GMRS user can't, at least legally, tranmsit on the
>467.XXXX FRS channel freqs. How many GMRS users do Search and Rescue?

Other than the fact that you're more likely to find a GMRS station within
earshot than a "search and rescue" radio? Other than the fact that -- due to
the new surge in interest in GMRS due to the recent license reform by the FCC --
the ratio of FRS-GMRS users is changing in favor of GMRS? Other than the fact
that REACT has a network of GMRS emergency monitoring stations in place, and
might be willing to add a receiver on an interstitial channel?

>Or even want to monitor like react CB Ch. 9?. I'm think a long the
>lines of law enforcement and search and rescue entities to use for
>lost parties lost in the woods etc.

I think *you're* lost in the woods.

When you're willing to walk away from your absurd all-encompassing solution
(that writes off a major chunk of the user base), maybe you'll find your way
home.

So you want emergencies to be monitored by a .5 watt radio with a bad antenna that can not be improved, rather than a GMRS radio that has at least 4 times the power, maybe even more, and can have a decent good antenna put on it? If you used FRS channel 9, the GMRS option with the advantages I just mentioned are out. if one monitors one of the first 7 channels, the GMRS option with the advantages I mentioned are in. Do you really want to make that type of sacrifuce just for a more cute number? I say pass on that one.

A few years back a post forged in my name soliciting gay boys caused a very sick picture to be mailed to me. I called the FBI and low and behold they had a computer crimes division. In the course of my dealings with the FBI guess which two names came up in the conversation? John Mackey Jr. was one of them. Yes, they DO know about Mr. Mackey-Loon.

What advantage would a "mobile phone" have for your application ??

It would seem to me that if you are scanning in order to pick up
the transmission, that a mobile phone is not needed. Do you
want the mobile phone to actually dial a phone number when
a fault is detected ??

When you say mobile phone, do you in fact mean "Cellular Phone" ??

If not, then perhaps a Motorola R-Net data radio unit, or a
Varda alarm would better suit your purpose..

Kantronics also makes telemetery equipment based around their
packet radio controllers.

Just my $.02 :-)

get an alinco DJ-C1 2 meter credit card transceiver.
it'll receive 123.025 and i paid $42 at dayton hamfest (tax included)
i think they're around $69.00 from american electronics supply - cleveland?
got to use an earplug or a speaker/mic. this is a coool little radio.
it's the size of a playing card and about 1/4" thick.
if you want to transmit - well look at a type accepted radio - although
alot of these "ham" radios will convert into all sorts of bands . . .
but that's another story.

Not having kids I have no idea what a "baby wipes heater" is (but it somehow sounds frightening) but if it is purely "electrical", like a heating coil or something, I don't know if you have any recourse. If it is "electronic" then it should fall under FCC Part 15. Enforcement is a whole 'nuther story though...

iCOM IC-255A, Two meter FM rig. Two VFOs, scans 5 frequencies.
covers 143.800 to 148.195 mHz. Transmit power 1 watt & 25 watts.
Reciever RIT control. Manuals, schematics, notes the whole banana.
This isn't exactly a "boatanchor", but it is a very reliable older rig

I will miss her. Reason for sale/trade? Just upgraded to 440/2m.
Please make an offer. I think the value is around $185
Or what do you have to trade?

DrPepper@iwvisp.com

408.4000 Rpt. Ground support
418.0500 Ground support

The old Alpha and Bravo VHF channels are probably totally out of use. It would be AM mode if present. All UHF stuff here is AM Mode. Ground crews love their new radios and use them quite a bit, about 1/2 scrambled last year. Some use at remote sights. There should be at least 3 other freqs active on the ground crews radios, so keep searching. Also check show / platform control, tower freqs and other area air traffic. I'd start searching the 225-400 Mhz military band a day or so before the show as the Angels will be up spotting the show, giving media rides, etc. Please post Blue Angels Airshow Freq Info what you find active the show.

If you don't find them on any of these start searching. Let us know what they are using this year! Happy Scanning!

Thanks to airshow/scanner fanactics all over the world!

Typically, if you're getting this kind of noise, it's because the
thermostat is about to destroy itself.

>The first time I brought up the problem neither one of us knew
>what it was. My neighbor said he was going to ask me the same
>question when I approached him about it. I brought out my
>portable SW radio and showed him that the noise was very strong

>to buy one just like it and please use it. He agreed and that
>was the last I heard from him.

Big mistake. In cases like this, even though it's technically your
neighbor's obligation to fix this, the diplomatic thing to do would be
for you to supply the power line filter for free.

>A few days later the noise returned and has been going strong for
>over 2 weeks since. I have asked him again to please stop using
>the device, return it for another unit or contact the manufacturer
>for a fix. None of which received a response from him. I am at
>my nerves end not to mention my severely hampered scanning, SW &
>AM listening as well as cable TV watching.

Cable TV? You either have a leaky cable TV system or a very heavy
duty power problem.

>This device is considered an illegal transmitter in my mind. But
>most information I have been able to find to resolve this issue
>pertains to CBers and Hams causing interference. Nothing about

>what to do when a neighbors severe hash interferes with us.

Diplomacy is key here --not responsibility.

>Is there any FCC or other document that states the legalities of
>this issue so that I can give it to my neighbor in hopes of him
>realizing the consequences if he does not attempt to resolve the
>problem? I have no idea what my next step should be. Any help
>is much appreciated, thank you.

Rule number one in receiver interference cases: The FCC will not help. The FCC has been emasculated to a degree that even where the laws do exist, they don't enforce them unless the violation is so egregious that it represents a public safety hazard.

Rule number two: not only do your neighbors not care about your radios, they don't even want to know that you have them. They're scared of you and of those infernal radio thingies. They think you're an electronic stalker. You might as well brag to them that you own a handgun collection...

Rule number three: BE HELPFUL. Say things like "I couldn't help noticing the static your baby wipes heater puts out. Usually that's a sign the thermostat is about to self destruct. You know how those appliances are; remember those models of toasters which when slightly overloaded caused house fires?" Do not tell them they're responsible for anything. Do not tell them how much the hash on the air bothers you. Yes, the law says they're responsible. No they don't understand it, nor do they care. There is no RF police to enforce a damned thing and most folks know it.

Finally, if you can't get them to take action, go somewhere else. I don't mean you have to move, either. I was at wits end when I used to live in a neighborhood with covenants. So I put my ham radio gear in my car. I figured that if I'm doomed to have a lousy antenna, the least I could do was to make it mobile.

You have to remember, the rules under Part 15 of the FCC regulations are being loosened all the time. Basically, the FCC doesn't care about anything below UHF these days. Cable TV systems can leak and they don't enforce a thing. Products can radiate all over the place and the FCC hasn't got the power to do anything but go to court. Monitoring stations have been shut down from coast to coast. The broadcast AM band is a morass of poor spectrum management which sounds like purgatory every time the sun goes down.

Frankly, ever since lawyers took over the FCC the regulations got more and more surreal and enforcement went from minimal to non-existant. You won't get any help there. I wish it were different, but that's how it is.

>Better yet, screw e-crap and just list the item for sale!

I've done it both ways and had better results with eBay as far as exposure, duration, and getting my asking price. Where else but eBay would someone gladly fork out close to $400 for a hacked-up Pro-2006? I've seen it happen many, many times. Great if you're selling something there, but forget it if you're looking for as deal....people will bid way more than market value for items just for the hell of it.

DPL = Digital PL. They work the same way as CTCSS. The frequencies are three digits (as you discovered), and may or may not follow standards. I can't remember the URL, but one of the scanner sites on the net has a list of the "standard" DPL frequencies.

> channel)

The R7100 has complicated programming routines.
Is this what you are looking for?

press the Down/Up key to choose the memory position
OR
key in memory channel#, i.e. "1" "1" "Mch"

enter the freq on the keypad or use dial if the channel is already
programmed

set desired mod if necessary, i.e. fm, fm/n, ssb...

press and hold "MW" until 3 beeps are heard to Memory Write into the
channel memory

Happy Scanning

there are no "Store and scan" frequencies in the radio. The frequencies are read from the database, and fed to the radio, one at a time. If the radio WERE in what is callled "Stand - alone mode", then you wouldn`t need the computer to run the radio. In "Stand - alone mode" the radio actually has 100 (or less) frequencies programmed in , and it runs (scans) on its own. I realize that this may be hard for a beginner to grasp. The traditional method was to program the frequencies into the radio. However, nether the Opto 456 (Lite or otherwise), nor the 535 ever deviated from this method of having the frequencies in the computer. It gives great flexibility in programming the radio, and virtually an unlimited number of frequencies. It also gives the abilty to program the settings individually for each channel, such as delay, tone detection, sound squelch, etc. It also gives the ability to change what banks the scanner scans in the wink of an eye. Or, even under program control ! (Witness the superb programming, flexibility, and intelligence of Probe 5.0).
Good luck with your Palm Pilot project, and I will be fascinated to hear if it does , indeed work, and how well. I really know little of the Palm pilot, (What OS it runs, etc) , and have been casting about for information about it, but little luck so far.

>now, including at Dayton. Anybody get one? Any reports??
>

Hi Harry,

I have had one for a couple weeks now and I am very impressed. Simple to program and use and very sensitive to boot. I live in the Detroit area and have not noticd any intermod. The audio is exceptionally clear and plenty loud.

I also think you will not find a company that is as genuinely interested in satisfying their customers. A phone call to Elektra is usually answered by Dave Loveel, the president ! I discussed several items on the unit I would like to see changed, they were very receptive.

Just my 2 cents worth ....

Right, but you're missing the point. The FCC can adopt a "rule" that there is no such law against and it becomes the same as law nonetheless, and the only people deciding what the rules are is the FCC. The FCC could very easily say that any scanner covering 800MHz would not receive type acceptance, thereby making 800MHz capable scanners illegal to sell, own and operate, without having to have a law passed by Congress. That is my point.

I would greatly appreciate if anyone has information on mobile phone
modifications/programing. Particularly Nokia 101 and Motorola 7500.
We are working on a project that requires mobile transmitters used for fault
alarms on remote industrial equipment and would like to be able to set up
various mobile phones as transmitters with the receiving mobile set up on
scan mode to monitor each of the transmitted alarm signals. The analog data
then will be fed into a computer for alarm trending.

Any help tips or references would be appreciated.

Regards,

Alf

2654. LASD MDT Question

Newsgroup: rec.radio.scanner
Date: 1999-05-25 00:00:00 UTC
From: Phil Smalley <ziggy7445@scanner.yahoo.com>
Message-ID: <7if7s9$a34$1@phxtst22.phx1.aro.allied.com>
Source record: 117466

Just curious if anyone out there knows what kind of MDT system the LA County sheriff uses. I listened to the frequency while visiting California this weekend and it sounds really weird, no frame synch or bit interleave signal like MDC4800, just data bursts, almost like packet in sound. Very odd, but it might not be too tough to decode if the protocol is available.

Anyone with details reply here in the group.
Thanks,
--

Its hard to believe what people were bidding for scanners on eBay. Back in
November I bought a PRO-34 for $50.00 in a pawnshop. It was in mint condition.
I put it up on eBay and it received nearly 40 bids, top bid was $234.00. And
the guy paid!

I still sell on eBay (not scanners) as well as Amazon. I make more on eBay
however Amazon is increasing nicely.

When eBay first started this crap about not allowing scanners I just had to
write an editorial with my $0.02 . You can find it at the RadiosOnLine E-Zine

For Sale:
Have a bunch of scanner magazines I'd like to sell to someone who'd like to learn up on the hobby a little, or browse through for reference. ALL were stored well and are still in great condition. Selling the following as one big package:

Popular Communications:
1992: June, Nov, Dec
1993: ALL except Apr and Oct
1994: ALL, including the 1994 Communications Buyer's Guide
1995: ALL except Feb, Jun, Oct
1996: ALL except Nov
1997: ALL except May
1998: ALL except Dec
1999: Jan, Feb, May, Jun

Monitoring Times:
1993: Jun
1994: Aug, Oct, Dec
1995: Jan, Feb, Mar, May
1996: ALL except July, Aug, Sep, Oct
1997: ALL except Jan, Feb, July
1998: ALL except July, Dec

U.S. Scanner News
1994: Sept
1996: Jun, July, Aug, Sept, Oct

RCMA Scanner Journal
1996: April, May, June

Plus many random National Communications, CQ, CQ VHF, Satelite Times, and Radio! issues.

Make a reasonable offer by email to danr@azstarnet.com . Heck, make an unreasonable offer and we'll see what happens!

Dan Rollman

We can debate this endlessly, and I have the advantage of having studied how the government and Constitution work. The FCC would be hard-pressed to demonstrate how an action like the above would accomplish any of the things they are empowered by Congress to do. If (and this is a very big IF) someone with the resources (meaning cash to pay lawyers) challenged the regulation effectively and was able to take the court fight far enough, eventually the regulation would be overturned because there was no valid reason for the FCC to adopt it. Executive Branch agencies are not permitted to act arbitrarily. Even Executive Orders from the President are subject to Constitutional review in the Supreme Court. It's called "Checks and Balances".

The court fight could be rendered moot if Congress stepped in, but in real life we know what the money says to them.

I think we've gone wayyy off the original statement, which was quite important and valid. The person who started this thread (and I apologize for not being able to remember who it was) made the excellent point that people who do illegal things and can't keep their mouths shut about it are endangering our hobby. Regardless of variations in laws and regulations among different countries, states, or whatever, he was absolutely correct!

>BC895 is capable of decoding it? Thanks!

DPL stands for "Digital Private Line" which is Motorola's trademark for DCS
or Digital Coded Squelch.

A station using DPL/DCS sends a subaudible datastream during each
transmission. A properly programmed receiver will allow its operator to
hear only transmissions with the correct coded data.

The only commercially available scanners with built-in DCS capability are
the Relm HS-200 and MS-200.

capaliwoda@aol.com (CAPaliwoda) has been posting the
"MORE ON THE MIND CONTROL CRIME IN THE CLEVELAND AREA"
conspiracy theory for several years, just check deja.com.

CAPaliwoda probably lives in the path of a Studio-to-Transmitter Link
(STL) for a radio or TV station. Which explains all those "voices"
CAPaliwoda has to listen to all day. Think of CAPaliwoda as a "target"
with a STL "aimed" at our "victim". For a picture, click on the URL
here: http://www.andrew.com/whatsnew/newproducts/images/3998L.jpg

For more information about "microwave" products From Andrew corp.
click here ---> http://www.andrew.com/products/all_products.asp

If CAPaliwoda is a "victim" of "wirless cable" , CAPaliwoda should
purchase an antenna from phillips-tech, http://www.phillips-tech.com/
and maybe that could resolve the issue.

In California, these people are known as "5150's", a reference
to section 5150 of the Welfare & Institution code.
--

CALIFORNIA WELFARE AND INSTITUTIONS CODE: SECTION 5150

5150. When any person, as a result of mental disorder, is a danger
to others, or to himself or herself, or gravely disabled, a peace
officer, member of the attending staff, as defined by regulation, of
an evaluation facility designated by the county, designated members
of a mobile crisis team provided by Section 5651.7, or other
professional person designated by the county may, upon probable
cause, take, or cause to be taken, the person into custody and place
him or her in a facility designated by the county and approved by the
State Department of Mental Health as a facility for 72-hour
treatment and evaluation.

Really? I've never said "Don't talk about it." I've simply said "ignore Mackey and he'll go away." (I can see how you might have been confused, they sound so similar - not.)

>The Cheek man has been arrested by FEDS.
Yes he has, no one is disputing that either. The issue at hand is not Bill Cheek, but scanning in general. The governments' case against him is setting a dangerous precedent, and the impact on digital scanning in general has been catastrophic:
POCFLEX: Gone
WINFLEX: Gone
MDTMonitor: Gone
RDLAP Decoder: Never finished
ASTRO Decoder: Author vanished, hasn't been heard from since.

It's already hurt the hobby, we were really on the verge of a scanning revolution, opening up parts of the spectrum that used to be nothing but irritating noise to a scanner listener. Now, no one dares work on such things, out of fear that they will be next. You don't find this troubling? I do. Companies can now market digital encoding as encryption knowing they can use our government to squash anyone smart enough to figure it out. And that's just for starters!

You want to know why Bill got singled out by the feds? I don't think it was the decoders that did it, or even that Knipschild nimrod who posted the MDT data to his website (although that damn sure didn't help). It is because Bill knows, as well as I and any other informed citizen knows, that our government is slowly but surely eroding the freedoms we take for granted.

Scanning is just the tip of the iceberg, and while we do number in the hundreds of thousands nationwide, we are a drop in the bucket compared to the general population. That's why things like H.R. 514 can pass the senate like they did - our opinion is seldom heard and matters even less.

Bill has said it several times in books and other literature that the first thing the government does to take something away from you is limit it's use, which has already happened to scanners. How long will it be before you have to pass a background check before being able to purchase a scanner? How soon before special permits have to be issued to use a scanner? How long will it be before the law requires you to register your scanners with the government? How long before all 50 states pass laws prohibiting the use of a

scanner in your car? All these laws apply to guns today, whose owners number in the millions. Well guess what, they can (and have, in some states) happen to us, and we have no N.R.A. or any such organization to speak on our behalf. How much easier will we be for the government to curtail?

What was Bill's mistake? What was his crime? Revealing the truth, nothing more. I'm sure though, that you're OK with all of that, just as long as Bill gets his "just desserts" right? You've got no problem giving up our freedoms in return for watching Bill "get his". That's real mature....and dangerous. Someday, when you're renewing your "scanning permit" so you can listen to your half crippled analog scanner (that is missing most of the 800Mhz band and gets inspected once a year to ensure type acceptance), I hope you'll remember that you thought this was so funny back in 1999 and hang your head in shame.

>
>1. Is there still some background hiss even SQUELCH in ON ? Because my
>YUPITERU MVT-9000 keeps me annoying with such hiss and made
>weak-reception more difficult.

No hiss. Even with the headphones on I have not heard any unless you
turn the volume almost all the way up.

>2. How it step up/down in 15kHz ? In Taiwan, police channels are
>allocated in 15kHz
> step, but not in 15kHz-integral. That is to say, they are 150.10,
>150.25, 150.40 etc. I hope 8500 can do this. I don't want such rig
>just to recieve 150.00, 150.15, 150.30 etc in 15kHz integrals. This
>is most concerning point.

Preset Steps: 10 Hz, 50 Hz, 100 Hz, 1 kHz, 2.5 kHz, 5 kHz, 9 kHz, 10 kHz,
12.5 kHz, 20 kHz, 25 kHz, 100 kHz, 1 Mhz.

Programmable Step: 0.5 to 199.5 kHz Example: Enter '15' then press 'TS' to
set for 15 kHz.

>3. Which discone antenna you use efficiently ? Diamond D-130, Comet
>DS-15 are my only two choices. Could you tell how they receive on
>25-1300MHz and transmit on
> 144/430 band ?

I had a Radio Shack discone with the verticle element but gave it up for
their wide band ground plane. This improved the low end 50-150 Mhz
and did not affect the 800 Mhz band much.

>4. How do VSC, AFC, APF perform, especially for voice reception ?

I haven't used the VSC and AFC much, but I like the APF to cut some
of the irritating noise.

Mr. Larson, you are very likely correct. I believe we should pray for
that man.

Oh no, I could NEVER try to hold that title. Bill Cheek won that title
severaltimes over according to information POSTED by YOU. Remember the "reality
check"
post where YOUR OWN DATA showed that Cheek posted several hundred more posts on
usenet than me!?!?!?!?!

Below is an abbreviated qoute:

Date | Mackey | Cheek |

TOTALS | 2139 | 2348 |

> rec.radio.scanner alone. By my count, John has posted about 6 or 7 on topic
> messages (very loosely on topic) out of that amount. The rest of them were
> simply insults, name calling, or sniveling denials and "prove it" posts. He

More of your LIES!! I have posted MANY valuable & on-topic posts
regardingamateur repeater frequencies, antennas, UV affects on coax, scanner
freqs in
the midwest, etc.

> Prior to usenet, he was on a Fido echo related to scanners, but was
> subsequently kicked off of the echo for the same kind of behavior, which he
> still denies to this day. Just ask him anything, he denies all. The

I have never denied this, infact I have often felt PROUD that Bill Cheek kicked
me offof the "scanradio" echo since he kicked anyone off the echo who had a
technical background
or felt was a threat to him. In fact, when Bill left the echo there was an
election for a
new moderator & I was nomonated by several, but Bill refused to allow an
election
that included me. That is how Blake was able to get the moderatorship of that
echo!

> The only reason that John exists is because of the actions of others. I
> have in the past and still today propose a simple solution: ignore him.

Then why have you chosen to respond with this lengthy post?

>>Can anyone help?
>

Hi there,

If you go direct to AOR's Web Site, the entire manual can be downloaded onto your hard drive. I do believe that AOR's site can also be found through Javiations scanner site as well. (though not 100 per cent sure)

This downloadable manual is a nice feature and I have found it most useful.

You will need adobe to read the script but this is readily available just about anywhere.

This will easily solve your problem.

Regards, Nigel

Message-ID: <374A62FE.1866B42A@cybercable.fr>
Source record: 117549

Well, you want to buy an interface for the AOR8000... This type of interface costs a lot of money if you buy it at any of the manufacturers who sale it (AOR, Javiation, Opto...). But it's really simple to realize!!! Look at it with any of search engines that are available on the net to get the shematics. It is just based on one IC called MAX232, and a few capacitors and resistors... Try it if you like.

The Blues used 141.850 quite a bit during the MacDill AFB show a couple of weeks ago.

As for the T-birds, they're going to resume their show schedule in June. The right wingman was fired after the Patrick AFB incident and the pilot who flew that position during the 1997 & 1998 seasons has been brought back to fly the rest of this season.

2691. ICOM 8500 questions

Newsgroup: rec.radio.scanner
Date: 1999-05-25 00:00:00 UTC
From: Miller Liu <muller@tp.silkera.net>
Message-ID: <374A7B95.EBB16565@tp.silkera.net>
Source record: 117553

I would like to ICOM R-8500 in a couple of days. Please help me to find the answers.
Hope I'm clear to explain my questions:

1. Is there still some background hiss even SQUELCH in ON ? Because my YUPITERU MVT-9000 keeps me annoying with such hiss and made weak-reception more difficult.

2. How it step up/down in 15kHz ? In Taiwan, police channels are allocated in 15kHz
step, but not in 15kHz-integral. That is to say, they are 150.10, 150.25, 150.40 etc. I hope 8500 can do this. I don't want such rig just to recieve 150.00, 150.15, 150.30 etc in 15kHz integrals. This is most concerning point.

3. Which discone antenna you use efficiently ? Diamond D-130, Comet DS-15 are my only two choices. Could you tell how they receive on 25-1300MHz and transmit on
144/430 band ?

4. How do VSC, AFC, APF perform, especially for voice reception ?

Thanks anyone help me with my buying decision!!!

Miller in Taiwan

--> football star is behind this crap, so here it is:
-->
--> The Definition:
--> That's the wrong John Mackey. This one's only claim to fame is being the top
--> off-topic poster on usenet with thousands of off-topic messages across
--> several different newsgroups in his short but moronic career on the

PKB. Keeps this OT crap outta rec.radio.amateur. There's enough petty
bickering here already. If you'd like a reservation we may have room for
you in 2002 or so.

--> internet. A dejanews search reveals all about this clown, with such famous
--> threads as "The PERFECT defense for Bill Cheek!!!!" and "Blake Bowers CAUGHT
--> forging & flaming AGAIN!". It is his self proclaimed mission in life, if you
--> can imagine it, to single-handedly rid usenet of anyone who opposes his
--> warped and twisted point of view. He will do anything to support his cause
--> and has been caught lying, forging, cancelling messages, and creating
--> aliases to show a false front of support. He is a living breathing self
--> propaganda machine, and a bad one at that.
-->
--> Now, our pal John will deny all or most of this, but don't be fooled. Do a
--> dejanews search for yourself, and see the sheer number of messages this
--> person has posted over the years. Dejanews reported back 1562 messages in
--> rec.radio.scanner alone. By my count, John has posted about 6 or 7 on topic
--> messages (very loosely on topic) out of that amount. The rest of them were
--> simply insults, name calling, or sniveling denials and "prove it" posts. He
--> thrives on replies, no matter how insulting. I think it is a subconscious
--> need for attention that he apparently cannot receive anywhere else.
-->
--> Prior to usenet, he was on a Fido echo related to scanners, but was
--> subsequently kicked off of the echo for the same kind of behavior, which he

--> still denies to this day. Just ask him anything, he denies all. The
--> consummate liar's liar. To hear him tell it, he is a victim of a ruthless
--> bunch of cyberthugs who harrass and torment him daily, but in reality he
--> brings it all upon himself willingly. He enjoys it, of this I am convinced.
--> The only thing more certain than his desire to disrupt is his predictable
--> replies to any posting mentioning either himself or Bill Cheek, the subject
--> of his apparent obsession.
-->
--> John is the proverbial pot calling the kettle black. He is the person
--> depicted in Aesops' fables, the one who only sees the small bag representing
--> the faults of others tied in front of him and not the mammoth bag of his own
--> faults on his back. He will take in an insult today only to use it on
--> someone else tomorrow. He is a mirror, a virtual parrot who uses the same
--> tactics that others use against him. He is lacking in better judgement,
--> discretion, logic and common sense.
-->
-->
--> Sorry to post it to the non-scanner related groups, but I think it only fair
--> that you all know the real deal about Laughing John's Flying Circus.
-->
--> The Vision:
-->
--> The only reason that John exists is because of the actions of others. I
--> have in the past and still today propose a simple solution: ignore him.

WOW! Excellent idea. Why don't you follow your own advice.

--> he is no longer able to disrupt the group, he will finally move on. Do not
--> reply to him directly, and he will have no basis for his attacks. He will
--> appear foolish and meaningless to any and all who happen to read his
--> ramblings. Much like a small child who finds that a temper tantrum won't
--> deliver the goods, he'll find better ways to fill his free time. No doubt
--> he'll reply to this posting in an attempt to provoke me into a flame war,
--> but it won't work - I would much rather discuss things related to scanning
--> than things relating to immaturity. It is my belief that if others shared my
--> feelings on this (and many do) that John would someday soon find that the
--> only one listening to John Mackey is John Mackey.
-->
--> And that, fellow citizens, would be music to my ears.
-->

Uh Oh, sorry, you're message was right next to one about the 8200 and
I got them inverted. SORRY all the text of my last message related to
the 8200 scanner and not the 2002.

Then again you should have seen what I was drinking last night!

Nigel

Source record: 117567

>Just wondering if anyone's ever tried using a frequency counter at an air show. Presumably ground-based users like security or organizers would be easiest to get this way, but what about aircraft comms? Are they too low power/distant from crowd to be picked up?

Ive tried Opto's and the Radio Shack counter at numerous shows. Most don't hit on AM mode signals. Ive had some hits out at OHare when standing right next to the aircraft at the gate and they keyed up the AM transmitter from about 15 feet away (radio shack unit). Opto many years ago built a counter (or was it an interceptor???) just for AM mode work.

They work good on NFM ground ops - the catch being these are always wide open spaces and often near urban areas and tend to have high RF back round levels / intermod problems. Less so for shows out in the middle of no where.

2706. WTT: PDA's to scanner

I know its a long shot but:

I have 2 spare Palmpilot Pro and 1 PSION 5 PDA's for trade.
I would part with any or all of these in exchange for one of these mentioned below.

I have credentials for one former exchange and am willing to offer full personal info.

I want one of these for my "collection": in pref. order.

UBC9000XLT (The European Version)
Optocom
RS 2042 or 2045 (can't remember which ones but the basemodels)

The smaller array is the UHF/800MHZ section. If you shorted the connectiopn
going to it, you have shorterd the feedline for the section you are trying to
use. They are parallel feedlines.
For success, use the whole TV antenna, rotated 90 degrees to vertical
polarization and hook it up with a balun just as you would for TV reception.

My neighbor of which we share a common wall (duplex) recently purchased a "baby wipes heater". I am not joking.
This device is creating havoc with certain cable TV channels and the entire MW, HF, VHF & UHF radio bands. Basically it is a spark-gap, DC to daylight intermittent hash transmitter.

The first time I brought up the problem neither one of us knew what it was. My neighbor said he was going to ask me the same question when I approached him about it. I brought out my portable SW radio and showed him that the noise was very strong around his house. I told him to turn off the main electric circuit breaker. He agreed and when he did so the hash disappeared. Next, I told him to turn the main breaker back on and using my portable radio sequentially turn off & on the individual breakers until the problem was isolated. He agreed and the problem was found to be the baby wipes heater, ugh. Then I offered to let him try my Iso-Bar line filter to see if it will cut down the noise. Since I didn't go into his house when he tried it I don't know if he actually plugged it in or if he pretended. But apparently it seemed to work. I told him to buy one just like it and please use it. He agreed and that was the last I heard from him.

A few days later the noise returned and has been going strong for over 2 weeks since. I have asked him again to please stop using the device, return it for another unit or contact the manufacturer for a fix. None of which received a response from him. I am at my nerves end not to mention my severely hampered scanning, SW & AM listening as well as cable TV watching.

This device is considered an illegal transmitter in my mind. But most information I have been able to find to resolve this issue pertains to CBers and Hams causing interference. Nothing about what to do when a neighbors severe hash interferes with us.
Is there any FCC or other document that states the legalities of this issue so that I can give it to my neighbor in hopes of him realizing the consequences if he does not attempt to resolve the problem? I have no idea what my next step should be. Any help is much appreciated, thank you.

Paul

Yeah right. You say nothing new. Same story to everyone.

Then in desperation you finish with this;

> Glenn Hansen, you are just mad at me because I was part of a team
> who caught you trolling for young gay amateurs on the NG of
rec.radio.swap.

REALLY? Please tell me more John. I know you are homophobic but this takes it all. John-Bowl, who are the other participants? What team?

This is the best example of what John-Bowl will do to try and turn the attention away from his lies and fabrications. You started this crap 4 or 5 year ago when a forged post came up after I brought attention to one of your lies. John-Bowl, you started in on me the time but was shut when others came to my defense. Is that what pisses you off so much John-Bowl?? Nobody comes to your defense? We aren't talking your made up characters that are only on Usenet for a month until YOUR free trial ends John-Bowl. We are talking peole that have been around here for years. How come none of these people ever defend you John-Bowl?

Blow out the pilot light and turn on the oven John-Bowl. Time to go to bed. Be sure to close ALL the windows we don't want any nasty drafts.

Click!

It seems eBay has removed all scanners with cell capabily.
Me personally, could care less about cell calls.
but I did bid on one for other reasons and was notified of the auction
ended by eBay.The radio isn't illegal as they pretty much put it.
It's illegal to manufacture,or listen to, that's it!
I think eBay should be a little more in tune with the laws they
are trying to enforce

That's my two cents. Thanks

Okay, I've got to ask...

Who the hell is John Mackey? Really now, if he's going to be spewing
crap all over the fire/EMS newsgroups, we ought to at least know who
he is and why he's got these alleged fans.

Source record: 117339

Hello. I have a Radio Shack PRO-2035 base scanner for sale. The scanner is at least a 9/10 cosmetically and it works 100%. It has very, very low use, and I've had no problems with it at all. It has 1000 memory channels, one touch weather, VFO knob, NFM/WFM/AM, RF ATT, RX from 25-520 and 760-1300 MHz (minus cellular), keypad, and data skip. This scanner can even be modified so that it can receive VHF/UHF in CW/SSB in addition to FM/AM if you have a SW Receiver, but I have not modified it for anything.

The scanner comes with the indoor telescopic antenna, AC power cord, base stand, original box, original packaging, and the original manual. First $250 gets it (that price includes the radio, UPS ground, and insurance). Please let me know if your interested. I would trade for a Ten-Tec 253 HF auto-tuner or like model. Thanks a lot for reading.

You know, Faricy, you are some one to talk. I have contributed to this news group for years, both up front and behind the scenes. What have You done ? Practically nothing. They could have read that basic information in any scanner publication, and in most cases, right out of the manual that CAME WITH their scanner. I am here, remarking on their laziness and unwillingness to exert the effort to even learn the most basic stuff about the hobby. You get out of a hobby what you put into it. I found that out years ago, with ham radio, where I got my license the HARD WAY, by LEARNING THE MATERIAL, instead of just memorizing the answers, like you and Mackey - Toon.
But don`t worry, next time there is a question, and someone gives the right answer, twenty of them will crawl out of the woodwork to say that it isn`t the right answer, when they don`t even have a clue. I have seen this time and time again. You know from nothing, and you get your undies all in a knot when someone points it out to you . Don`t preach to me Faricy. You aren`t high enough in the food chain.....

Exactly right.

I remember BILL always said
that the vile-one would go
to far down the road.

sorry to say it cost Bill his
freedom of commerce and well-being.

People...maybe now you see why
the maggot of mackey must
be stopped now...the only
way you can stop him is
to ignore him.

He cannot work out of a vacuum.

he needs you and me to exist.

I don't give him that luxury
any more...no time anytime and
not in mytime.

show your guts and quit the
bile-back-and-forth.

we have the collective power to
kill off the vile-bile one.

if you realize this, signify by
never answering this maggot
of the worst pile of vile
again...he must return to his
mother's womb to atone for the
sin of bashing bill.

show you count as human beings.
allow this festering pit to just
fill up his hole himself and die.

you hold the power over him.
exercise it.

bill conduit
etc.

That`s a bunch of crap, Looney - Tud. You been on here flapping for over three years by my count ! Yeah, I would say that 350 inane postings totally devoid of any kind of intellectual or radio - related content a month is a conservative estimate of your "Life`s Work". You know, listening to your stupidity pour out is like living next to the railroad tracks. pretty soon, you either don`t hear the trains any more, or you are amused by them. And you fall into the "Amusing" category, Dud - Buds. You have a definite patttern you repeat, over and over, like some kind of stupid Mantra.
First you start a thread, usually following some mention of Bill Cheek, (even if it is just one of his automated postings) and then, when the truth starts to invade your little fantasy world, you deny all, even stuff you said just two or three postings ago. You prove yourself a liar more often than anyone else on this group !
As far as the license fiasco, the only salient point is, just which crackerjax box you got the prize in.! You are like some kindergarten kid , crying and yelling, in his short pants, "I GOT MORE LOLLIPOPS THAN YOU" !
There are small variations, like creating a phony "support group" of phony postings from cobbled up - e-mail addresses, and sometimes, if a posting hits too close to home, you go into what I call "cancel" mode, where you cancel the posts, so you don`t have to read the truth. The truth really messes with your head, huh , Looney ?
When it is over, you retreat into your fantansy world again, and you don`t post for a while. you need that time to put it all back together. Yeah, we got you figured out all right.

eBay
> however Amazon is increasing nicely.

Yeah, Amazon is still catching on, but I did very nicely selling a 2006 there last month. The bidding got ridiculous in the final 15 minutes and I ended up getting $430.00 for a scanner I only paid $150.00 for to begin with. It, too, was in mint shape, but I never expected to see it go for that kind of money. The guy who won the auction sent me the money order that day and said he had been looking all over for a 2006 (like this was the last one on the face of the earth). All I did to it was clean it up with some 409 cleaner, and take a couple of digital snapshots of it to put online. It's amazing what people will pay for stuff in a competitive situation like that. On the other hand, I had a 2004 (still have it) that is in nice shape that didn't even make reserve on eBay. There were 4 or 5 of them listed as the same time as mine, so the selection and poor timing on my part killed the sale. I ended up becoming attached to the scanner and it happily chugs away in my dining room.
I gotta say that I feel more comfortable on Amazon as they require a credit card and don't hassle people about what is listed.

Looney - Tud, did you really think we were going to wait until the "official' legal defense fund was established , before we would help a friend ? I sent what I could, and quite a while back. I will send more, if I get ahead far enough to see my way clear. I am not going to wait for a nut-cake like you (or anyone else, for that matter) to say it is now "officially set up", and send my money God knows where and to whom. I MOST CERTAINLY would not send anything to any "fund" set up by YOU, and that is CERTAIN. Bill has learned the truth of the old saying, that you find out who your real friends are when you are down and out.
And here is what I have to say on the matter. Bill needs your help, and he needs it NOW, not 6 months or a year down the road, when some "official defense fund" is set up. You want to help Bill ? Then send him the help. You a friend of Bill`s ? Then do what you would want Bill to do if it was YOU that was down and out. That is what being a real friend means. And maybe your God, Whoever or Whatever he is, will smile upon YOU in YOUR time of need.

>Why would anybody want to do a mod to get cells on a scanner that gets
>all the cells you would want to hear, on 896 to 914 mhz???jerr1919

Because even images don't cover the whole spectrum. 896 to 914 covers
874.4000 to 894.2000 The cellular base band starts at 868MHz and goes up to
896MHz, so you miss a chunk off each end. All is better than most.

Of course, cell scanning is just about as exciting as watching grass grow,
but suit yourself.

ZW: While I agree wholeheartedly about this, Bill Conduit has made an
excellent suggestion: Twit-filter John and act as though he never existed.
As long as people like us try in vain to get him to see the err of his ways,
he will still be here clogging up the group with his nonsense.

I for one, am sick of trying to educate John. Now I simply ignore him. We
all should. It will work, if we all do it together....

Not to mention that you just feel better about not stooping to his level.

Trust me folks, if everyone participates, it will work. I've seen many an online forum get attacked by worse than John, and it hardly made a ripple because no one responded to the bait. Once the cretin realized that no one would respond, he or she would simply vanish. I can not stress it enough: if we all do it, it will WORK! I've seen it happen again and again.

Thanks Bill, for concurring with what I've said for months. Hopefully, it hasn't fallen on deaf ears.

Not very easily. You could modify a VW Bug into a Ferrari, but would you really want to? The very fact that you ask leads me to believe you don't have the technical background to build your own FM transmitter, which is what you'd have to do. (Please don't take offense, I don't have that kind of skill either! My skill level with homebrew electronics falls somewhere between dumb and dangerous. <g>)

The thing to do is go out and get yourself a *real* Amateur HT. Most if not all of them have receive-only coverage that is the same, or in some cases better, than a scanner. Plus, you won't have to deal with the expense and hassle of building your own.

From: Mike Cira <dardvl@bellsouth.net>
Message-ID: <374C8E91.353F@bellsouth.net>
Source record: 117360

The only frequency I got for the Thunderbirds was 141.850 AM at the Patrick AFB show. Unfortunately I left my GOOD scanner at home in Ft. Lauderdale! As of now though the Thunderbirds ARE BACK FLYING AGAIN!

As far as the Blues go I got a few frequencies from the MacDill show a few weeks ago. 345.900 got lots of use so did 238.150 275.350 236.450 and on startup 170.900 NFM. Fat Albart "JATO" used 263.350
Someone said something about 141.850. I would like to know if this WAS in use and if so was it AM or NFM? Thanx! Hope this helps!

A law enforcement helicopter with DF capability would be a lot more
effective than GMRS base station. Need to look beyond a base station
in the remote areas if you want to locate the lost hikers in teh
woods. Again, hikers don't carry GMRS radios.

Tell me how a GMRS base station is going to look for lost hikers in
the woods. Maybe the base station may be able to talk to the lost
hiker so what, if the hiker is lost the hiker doesn't know where
he/she is anyways.

I'm all ears.

Is it possible to modify my lunchbox to transmit on Commercial
frequencies? :)
ANYTHING is possible. Sure a scanner can be modified to transmit on any
freq. you want, you just have to add a transmitter.
Same goes for my lunchbox! (and a reciever)

All in good fun. People learn more when they are laughing.

The RE2000A is actually one hell of a scanner. It is kind of like a Relm HS-200 on steroids. The shielding is beefier and it doesn't miss a beat in the sensitivity area. Also the intermod is significantly reduced. Overall not a bad price for that kind of performance and alpha tagging to boot.

> hmm, something I didn't spot earlier (thanks glenn!).

No problem but now John-Bowl is once again in my dumper. I'm following the Republicans, Democrats, Libertarians, Lutherans, Episcopalians, Catholics, Jews, Muslims, Hindu, Cheek alike, Blake-alike, George-alike, Zombie-likes, conduit-likes and the rest of the followers that despise Mackey for one common reason, helping to get Cheek arrested thus causing more harm to scanning. Regardless of what Cheek did or said or anything this is going to hurt and Mackey is a wipe enough to brag about his part in it.

Just think, John-Bowl will feel like he's in the middle of a DX contest on 160 meters at high noon. Nobody can hear the Bowl anymore.

Bye John-Bowl. FLUUUUSSSSSSSHHHHHHHHHHH!

All gone!

and they arrested BILL.

and in the background they allowed
janet reno the privilege
to allow Chinese spies to
walk out the door with all
our atomic secrets..

gee...bill is more important
a security issue than allowing
foreign agents to "just walk
on in and help yourself' by
janet's proxy

you see, Janet knew. But others
did not. She would not allow that
i info out to the FBI. Or other
agencies.

she wanted to please the pres
who was courting the chinese
on our own turf.

I think it's time to Impeach the
President and Janet Reno and
those who allowed it to occur.

bill gets arrested and
we allow atomic secrets
of our whole arsenal to
be willy-nilly sent to
China with well wishes
from Bill and Hillary
in hopes the Chinese
invite them to tea.

bill conduit
etc.

I do.

:He points out - correctly - that it is illegal (in the USA) "to modify your
:scanner to monitor cell calls". As of 1999, individuals may no longer
:lawfully modify their own personal scanners to monitor cellular frequencies.
:Practically unenforceable, but it is the law.

You really should READ this stuff before you reply to it.

I pointed out - correctly - that it is legal (in Australia) "to modify
your scanner to monitor cell calls". As of 1999, individuals may lawfully
modify their own personal scanners to monitor cellular frequencies.

It's also quite legal to sell new scanners that cover cell frequencies.

The government have enacted legislation that, after 1/1/2000, will
prevent monitoring of cellular conversations very effectivly.

So you admit it? John, you really should be ashamed.

I realize that you have been obsessed with Bill, but to
turn him in for selling decoders? Sheesh!

2835. John Mackey turns in Bill Cheek for selling decoders!

So, you admit that you were involved with the arrest of Bill, and knowing that you are neither a state, federal, or local law enforcment officer or member of the judicial system, and are unwilling to explain your statements.

Your admission to turning in Bill turns my stomach. You should be ashamed!

Source record: 117426

Ok I am in need of some help here On 05/25/99 around 9:00 Pm serveal Units from Orange County Fire and Orange City Fire also a Mercy air unit and a CHP air unit where called out to a traffic accident on the highway 241 at the 91 freeway I was able to listen in on most of the action on the my scanner on the freq of 856.9625 Ok now that Ive set the scene now for my questions? The Corner was called out for the DOA .

#1 Dose any one know the freqs that Mercy Air uses ? I was scanning the ones listed in the Police Call book but I had no luck , the freqs where in the 155mghz band are those it or are did they change ?

#2 Dose any one know of the Freq the Mercy Air would use to Commucation with the Air unit from the Chp ? I tryed 45.300 OC air cordnation freq no luck also try 123.025 and hered nothing abount this icendent. I know for a fact that the two air units did talk to each other to set up a LZ , Al so hered "Mercy Air 4" come up on 2 Echo to talk to the ground units.

#3 Ok I know that the OCSD dispatch on 460.425 green but when the corner in calles out what channel do then use or whats there call sign "18XXX" I hered Nothing On etthier OCSD channels for this call.

Thanks In advance
Matt

OK, the only way I can see a transmitter causing a fire is if the electromagnetic waves induced a voltage in some conductor nearby which had a nice complete current path except for a small airgap. The waves could possibly, if it was set up just right, cause a spark there. This, I would have thought would be very unlikely, especially since petrol pumps and other equipment in that sort of potential atmosphere has to be designed by law to specifically not have the potential to cause explosions from static sparks or otherwise. I would have considered this far less of a risk than bringing in a car with such sparking or hot components as a starter motor, a distributer, a hot engine / exhaust system!!!

Also, there are signs around saying that mobile phones are "current emitting devices", what is the go there? How can a mobile phone emit current, it only emits radio waves? It makes the people who put them up seem as if thay have no clue.

jmackey@usa.net wrote:

>People like YOU are only mad at me because of my involvement with the Cheek bust.

Wrong. The issue is YOU and NOT Cheek.

How are you "involved" with the Cheek bust? Are you a Federal agent (Bawhawhaw!). Did you drop a dime on him or something? Did you try and set him up?

I have a problem with YOU posing your useless and off-topic drivel here on a daily basis.

It wouldn't be bad if you posted something on topic once in a blue moon, but you can't even do that.

Prove me wrong if you don't think so by showing me a message where you posted on-topic anytime over the last 6 months. Provide a dejanews link (challenge #73 about to be failed by loony tune).

I'm not a pilot, but I do have some knowledge of the FAA requirements.
I'm not speaking for anybody but me btw.

Any electronic item used on an airplane has to be qualified (to DO-160
requirements is one way to demonstrate to the FAA that it's qualified)
and then Certified for that model. Certification would mean ground and
possible flight testing of the equipment on that major model airplane.
Once you got your qualification test report, you can look at the
spectrum
of radio emissions and you know what systems may be susceptable and
check those for interference, but any system affected can lead to one
or the other box being uncertified.

All equipment used on board must be controlled and checked at regular
intervals by FAA certified technitions. Once in the hands of a non-
certified technition, it's become suspect - only a conformity inspection
to make sure it is of the same design and no unauthorized modifications
to the unit have been made can bring it back into certified status.

If you're not an FAA certified technition, anything you bring on board
is illegal to turn on, (and an FAA technition wouldn't turn something on
that wasn't certifed for flight, even his test equipment on board
must be flight certified) according to the FAA. But they left it up to
the pilots to enforce it.

I've seen everything from Cell phones to CD players mess up flight
deck avionics. Some things don't. A lot depends upon the equipment
being used, the airplane model, and even where you sit on the airplane.

Any equipment that is latent, that is, battery operated and running
like a cell phone waiting for a call, or a lap top with an active
clock while off, is right out.

: The ConQueror writes:

:> Is it possible to modify a scanner to transmit on amateur frequencies?

: Nope.

Well -- the correct answer is always: "It depends."

One of the regional state highway patrol freqs is at 154.905 mcs.
So, I get to hear a lot of "tweep-tweep-tweep" QRM between
144.200 and 144.205 mcs.
Granted, this is not a "modification" to xmit on amateur freqs.
Oh No, it works that-a-way right out of the box.

2876. Larsen 800 Yagi - very good ant.

Newsgroup: rec.radio.scanner
Date: 1999-05-26 00:00:00 UTC
From: leadenwah@aol.com
Message-ID: <19990526112349.13058.00004897@ng-fh1.aol.com>
Source record: 117509

A previous posting requesting suggestions on an 800MHz Yagi, a directional antenna, was answered by one user with Larsne's model.

Larsen makes a very good, solid 800 Yagi which mounts easily to most masts and even flat wall surfaces in some cases. Larsen makes professional two-way, base, mobile, handheld antennas. I have used them for years for both two-way and scanner applications.

So called " scanner " antennas are usually cheaply made which means that they go quickly to the devil in weather. An antenna does not have to be knocked down to begin serious failures. It is often gradual with corrosion and loosening as primary problems.

Larsen products are more frequently found at 2-way radio shops and dealers or at Ham supply houses and some hamfests. I have no connection with Larsen, but know the line and like the service. Antenna Specialists also makes some very good 800 Yagis, but it is a little harder to deal with them. A/S has a " hobby " line of " scanner " and CB antennas which is not exactly top quality, but their professional line of base and mobile antennas are very good.

2877. What hardware/software req. for MDT mon

Newsgroup: rec.radio.scanner
Date: 1999-05-26 00:00:00 UTC
From: leadenwah@aol.com
Message-ID: <19990526112858.13058.00004905@ng-fh1.aol.com>
Source record: 117510

I am looking for the proper software and hardware combination for monitoring mobile data terminals. I have the PRO-2006 with OS-456 board installed and the BC 895 as well, but no software.

I presume that it is legal to do such monitoring as I don't believe that it is encrypted. I thought that I remembered something about a web site dedicated to this.

Our local PD suddenly sprouted 800MHz antennas though they are strictly on High Band still. I noticed that they now have MDT's so this was my reason for wanting to monitor.

Will appreciate any suggestions or assistance.

Geo.

Sorry, I took your post as the so familiar right wing knee-jerk Clinton bashing. You know where ignorant people talk the Chinese thefts when the last 2 administrations set up the whole affair or the tired and old Clinton draft dodger crap when Slick Wily actually had a college deferment.

Though I have to agree that the Government seems to have once again stepped on their genitals, nobody has explained why Opto and others selling slicers were left untouched. I still think Cheek's ego once again got the better of him. Selling the slicer was one thing, bragging that it might be illegal but you can easily get the software on the net is another but giving the MDTware on disk to unknown people who you sold slicers to is down right ignorant beyond belief.

Excuse me, but I worked in the Hazardous Waste Remediation field for
many years. Have you ever bothered to check your facts? First, most
passenger vehicles and light trucks (at least in the US) manufactured
in the last 25 years have positive-pressure explosion-resistant fuel
tanks designed primarily to prevent such an occurance. And many
states now require vapor recovery systems on their fuel pumps.

Furthermore, Gasoline vapor is only explosive over a range of about
1% to 11% in air by weight and it requires at least 900 degrees
fahrenheit to ignite gasoline vapors. Cigarettes burn at about 460 to
600 degrees fahrenheit. In fact, I've seen safety demonstrations done
by fire departments where they'll fill a bucket with gasoline and then
extinguish a lit cigarette in the bucket.

I used to test the fuel value of bulk waste flammables (for cement
kilns) with an EPA test called a Flashpoint (closed cup and open cup).
This test is where you place a suspected flammable liquid in a small
vessel and heat it until it "flashes over." The amount of energy
required to do this is quite large, and the initial flashpoint is NOT
at a point where combustion can be continuous. The amount of energy
required to continue combustion is much higher than initial flash.

If random sparks could ignite gasoline easily cars and trucks would be
blowing up driving down the road. The static electricity caused by
your cars tires rotating over pavement generates several thousand
volts of potential, not to mention that when fueling a vehicle, the
gas or diesel flowing through the hose generates a heck of a static
charge.

My former boss used to run one of the largest hazardous waste
facilities in Arizona as well as a fuel depot. He is a degreed
chemist and physicist. As a ham radio operater I asked him why they

had drivers turn off transceivers in certain areas of the facility. His response was that they were not worried about stray RF inducing a spark and igniting the flammable liquids, but that we did store REACTIVE substances on site, and that those can be affected by high levels of near-field RF.

Recently, I saw a special on TV about perceived risks. Despite the fact that the average person lives about twice as long as people 100 years ago. If you ask people today, they think that life is much more dangerous now. One example the listed was that, per capita, the death rate 100 years ago from sexually transmitted diseases is THIRTY times higher than today, even with AIDS. Why do I bring this up? The point of the show was to make light of the fact that we live in a time of blatant fear mongering where people have to make up stuff to be afraid of.

Subject: Yaesu FT-50R Guide V 1.1
From: childers@garlic.com (Bill Childers)

The (In)Complete Guide to the Yaesu FT-50 Version 1.1

Compiled by Bill Childers, KE6VVW

Disclaimer & Other Nonsense
The information in this document is a guide to the FT-50 ONLY. Having had more than a few radios in my amateur experience, I understand how most hams wish to learn as much about their rigs as possible. I have compiled this guide to allow other people to learn more about the radio without having to search all over for information. I do not guarantee the validity of this information, as Yaesu may change programming or hardware so that some of the techniques in this document may cease to function. I am not responsible if these instructions damage your rig in some way. All I can say is that I have performed the following procedures to my unit, and I am quite pleased with the results. Your mileage may vary, etc.

History

Version 1.0
1st introduced.

Version 1.1
Added: Game mode, Changed High Power Mod to "Internal System Alignment". In this section I also detail the squelch and S-meter adjustments. Also added info to the bug on the FTT-12 Keypad.

Introduction
The Yaesu FT-50 is perhaps the most unique VHF/UHF Handheld manufactured today. It's made to MIL-SPEC 810, for dust, splashproofness, and vibration. Out of the box, it has not only dual band 2m/440 capability, but wide FM receive and AM receive as well. In addition, it receives 76-200 MHz, 380-500 MHz, and 700-900 MHz (Cellular Blocked). It has one of the fastest scan speeds for an amateur HT. It also has the unique ability (w/ ADMS-1C software) to interface with an IBM PC running Windows and have memories and settings uploaded/downloaded. In addition, it has DCS (digital coded squelch), ARTS (auto-ranging transpond system), and Yaesu's excellent transmit and receive battery saver features. It also uses Yaesu's extremely efficent FET power module that allows for 5W+ of output power with a 9.6V battery pack. With the optional FTT-12 keypad, the unit also performs CTCSS decode,

DTMF paging, and also incorporates a Digital Voice Recorder! All of this functionality in such a small package makes it my rig of choice.

Problems (Bugs)
Unfortunately, the FT-50 is plagued by a few bugs. None of them are very serious or life-threatening, just a bit annoying. First among them is its Wide-FM receive. Apparently Yaesu engineers didn't put a wide enough filter in the unit, and some of the bandwidth of broadcast FM signals gets "chopped off". This means that the rig is near useless for listening to music on the broadcast FM band. It works marginally with voice only on the same band. My opinion on this problem: If you want to listen to music, bring a small Walkman or other transistor radio with you. The 50 does an adequate job of bringing voice signals in on broadcast FM, so it's good for listening to emergency broadcasts.
The second "bug" lies in the optional FTT-12 keypad. The manual for the radio states that you can set up a "voice mail" type of functionality that lets your radio operate unattended and record calls for you. This mode doesn't work correctly, although the built-in voice recorder works great. It seems that the unit will playback the wrong voice partition. The problem appears to be in the DTMF page-answer-back area. If you're buying the 50 and FTT-12 solely for this purpose, DON'T! It doesn't work and there's no current workaround.
The third bug has been complained about a bit. It seems that some 50s suffer from a low Tx audio problem. This is due to a factory adjustment that is set a bit on the low side. It is easily fixed. (See Factory Adjustments below).
The fourth "bug" is synergistic with the ADMS-1C software. If there is some kind of problem in downloading a file to the radio, the software aborts with an error, and the rig is left with it's memories cleared in a "limbo" state. This state is actually the European band plan, and if done properly, the rig can be modified to receive even more frequencies which will be described later. (See modification section) However, if you want to return the rig to its natural state, simply download a blank frequency file (NONAME.RDF) to the unit. All should be well.

Factory adjustments
If your rig suffers from the low Tx audio problem, here's how to fix it.

1. Remove the battery and antenna.
2. Remove the "NiCd" sticker on the heat sink. If you remove it very carefully, it's possible to re-install it later with the same stickum that's on it.
3. Look in the cavity where you removed the sticker. Proceeding from left to right, here's what you'll see
Phillips head Screw (Holds the keypad in)

Small Silver Potentiometer (VR1001 VHF Deviation
Adjustment)
Small Silver Potentiometer (VR1002 UHF Deviation
Adjustment)
Small White Potentiometer (TC1001 DONT TOUCH! CTCSS Tone
Adjustment!!!)
Phillips head Screw (Holds the keypad in)
4. Take a small Phillips head Screwdriver and turn both VR1001 and
VR1002 about 1/8 turn clockwise. This will increase the VHF and
UHF deviation and fix the low Tx audio problem. If it s not enough
Tx audio, simply turn both pots another 1/8 turn. Make sure to
turn both pots the same amount!
5. Replace the NiCd sticker, battery, and antenna.
6. You re Done!

Internal System Alignment (May not work on some radios)
NOTE: This setting appears to work on radios that have NO MEMORIES
programmed. You might want to try STEP 3 before clearing your
memories. If step 3 doesn t work, you probably need to clear your
memories. BE CAREFUL with these settings it s possible to really
mess the rig up by setting some funky squelch or something you
might want to write the default settings for your rig down.

1. Select 2m VFO frequency.
2. Turn the radio off.
3. Push LAMP, PTT, Knob, and PWR at the same time. The rig will
turn on with the squelch open, so turn the volume down!
4. The 50 will display "BAND xxxxxx" where xxxx may differ
depending on your radio and whatever mods you may have performed.
5. Turn the top knob. There are a variety of settings available.
Here is a listing of them:
 HSSQ: Squelch Hysteresis Adjustment, adjusted by the dial.
 THSQ: Squelch Preset Threshold
 TISQ: Squelch Preset Tight
 S1LV: Low-Scale S-1 Adjustment.
 S9LV: S-Meter Full Scale Adjustment.
 HIPO: Hi Transmit Power Adjustment: Should be calibrated for 5W
(Can be pushed higher with a 13.8V Supply)
 L3PO: Level 3 Power Adjustment: Should be adjusted for 2.8W.
 L2PO: Level 2 Power Adjustment: Should be adjusted for 1W.
 L1PO: Level 1 Power Adjustment: Should be adjusted for .1W.
6. Select the adjustment you wish.
7. Push in the Top knob. There will be a "s" that appears next to
the displayed number.
8. Rotate the knob to change the setting.
9. Change other settings, if desired.
10. Push the knob for more than 1 sec to save the profile.
11. Select 440 VFO frequency.
12. Repeat Steps 3-10 to adjust the UHF Settings. UHF Settings will
have a "U" in front of them.

Modifications
The FT-50 is extremely easy to modify. The first modification is performed for you at the factory but for those of you who accidently disabled it, or changed it here it is.

Extended U.S. Receive Mod (Expands receive from 144-148 & 430-450 to 76-200, 380-500, 800-999 cell blocked) NOTE: All memories will be erased.
1. Turn the transceiver off.
2. Hold down the Knob and Lamp keys while powering the unit on.
3. The unit now has U.S. Extended Receive.

MARS/CAP mod (Extended Transmit Mod: app. 144-159, 420-470) NOTE: All memories will be erased.
Don't transmit on bands that you're not licensed for!! Besides being illegal, it creates problems for people using those frequencies.
1. Remove battery & antenna
2. Remove NiCd Sticker on Rear Heat Sink
3. Loosen (Don't Remove) Philips head screws on rear that hold keypad in.
4. Use screws as thumb holds to press keypad out.
5. Remove screws.
6. Remove Keypad.
7. Under Keypad on Left Side there is a series of Solder Jumpers. They are labeled in white from 1-3. Only #1 will have solder jumpering it. Remove the solder, being careful not to damage or touch any other components. WARNING: If you're not good at desoldering, or have shaky hands, you might want to have someone else do this for you. It's REAL easy to damage the rig.
8. Reinstall Keypad. Be careful of the O-ring around the keypad. Make sure it's not twisted or damaged, as the waterproofness of the unit could be compromised.
9. Install sticker, battery and antenna.
10. Hold down Knob and Lamp keys while powering the unit on. (Extended Receive Mod as above.)
11. Completed!

Super-Hyper Awesome Mod The mother of all Mods!!! (Requires ADMS-1C software and MARS/CAP mod to be performed)
Receive: 76-999 Mhz (No displayable holes!!!)
Transmit: 120-221 Mhz, 320-499 Mhz (AGAIN, Don't transmit on frequencies where you're not licensed)
NOTE: This mod will disable ARS (automatic repeater shift) and will set 2m and 440 repeater offset to weird numbers. Make sure you enter repeater offset and +- shift manually. Repeater offset needs be set once for the rig, then it should be able to be forgotten about. It will also clear memories.
Remember above where I mentioned the ADMS-1C software having a bug? Here's where the enterprising and curious ham can take advantage

of that. This mod will install the European band plan in your radio so without the MARS/CAP mod you will lose the top portion of your 2m band.
1. Are there frequencies in your radio? Don't want to lose them? Simply get the data from your radio as it sits you can "merge" the frequencies later. Save the file.
2. Perform the MARS/CAP mod as outlined above. Get the data from the mod and name it USA.RDF.
3. Attempt to send the same data to the radio. In the middle of the transfer (around 50%), pull the adapter cable to the PC out of the radio.
4. Thanks to the bug, your radio is now in European mode! Perform the Extended Receive Mod by holding the Knob and Lamp keys down while turning the unit on.
5. Now, the Automatic Repeater offset doesn't work. There's no workaround. Note that the 2m offset has been changed to 0.00. Go to the menu by holding down the knob. Go to SHFT, Option 7. Press the knob. Turn the knob so that it reads 0.60. Press PTT.
6. Now, turn off the radio. Put it back into clone mode. Read the data back from the radio to the PC and save the file as EURO.RDF.
7. If you want to enter frequencies manually or using ADMS as normal, go ahead. Everything should work. If you saved frequencies as above, open EURO.RDF and "merge" the frequencies from your USA.RDF file into it, and save it as another name. Then send the modified EURO.RDF (your filename) file back to the radio using the "template" file EURO.RDF. You're done!
8. To return the radio back to the U.S. band plan, send the USA.RDF file back to it.
Note that I have no way of measuring the sensitivity of the frequencies or the output power of the rig outside of the ham bands. The 220 coverage seems to be very poor, however, the radio does display 220 frequencies. It won't transmit on our 220 bands, though. 800 Mhz receive is vastly improved.

Game Mode
The FT-50R includes an interesting "game" that's programmed into it. Here's how it works:
1. Power up the radio while holding down the MR key. (PWR + MR).
2. The display will show GAME on the left side, and Spd 1 on the right. You're in game mode!
3. By rotating the knob, you can change the speed of the game. Higher numbers are faster.
4. Press PTT to start the game.
5. Numbers will start to scroll across the screen from left-to-right. As they come, you are supposed to push the number on the keypad that makes a sum of ten, followed by F. Example: 6 appears, press 4, F. If 0 appears, enter 10 followed by F.
6. The game is over when the screen fills up with numbers.
7. To exit the game, simply cycle the power.

especially your turning bill cheek into
the feds...you admitted it and it was
by you that you did.

people: I don't know about you, but
seeing as how this maggot of butt-futt's
ville admits to turning BILL in, I for
one will never ever give this triteness
a word again.

and i would hope that the rest of you
will see similar and leave this pile
of maggot-shit in his pile to fester
and eventually get pulled over for a
traffic violation and find that he's
not who he claims to be and off to
jail he goes...

...and then having the gall to ask NGERS
to bail him out.....

peope: he admits to turning bill in.

I for one will act upon that and never
give this vile-bilefull maggot a note
of concern or notoriety which he seeks
from us.

Enough is enough. Support Bill by
not supporting the maggot of vile-bile
anymore....

you don't need to answer this
maggot. he needs us more than
we need to answer him. without
us he would not exist.

Well, he don't exist in my files any
more and KILL FILE next stop.

come on NGers, have the balls to
stand up and be counted where it
counts the most. show support
for the MAN he caused this debacle
over and get rid of the urge to
keep him alive.

now, back to BILL.

The FCC search page shows 155.2200 as the frequency, but this is primarily for dispatches. Once the are on scene of an incident they should be on 154.2800 or one of the CLEMARS frequencies.

>#2 Dose any one know of the Freq the Mercy Air would use to Commucation

"Mercy
>Air 4" come up on 2 Echo to talk to the ground units.
Most agencies will use 123.100 or 123.500 for helo-to-helo comm's. They might have also been on 42.34 or 39.18, but I doubt it.

>#3 Ok I know that the OCSD dispatch on 460.425 green but when the corner
in
>calles out what channel do then use or whats there call sign "18XXX" I
hered
>Nothing On etthier OCSD channels for this call.

Things like the Coroner, Animal Control, etc. have their own seperate radio frequencies besides the sheriff's department. I'd check any listings you find in Police Call with a service code of "L" - chances are one of them is for the coroner.

If you have to have cellular then the Euro version of the BC3000XLT is probably the best bet for the money, especially if you order from Bandercom, which seems to have the best prices. If cellular coverage isn't a big deal I prefer the Sony SC1 over the 3000XLT. It's more sensitive and has better audio than the Uniden, and it uses 4 AAs rather than that damned nicad pack that now costs $60 to replace.

John's initiation of a Bill Cheek thread:

Subject: How to contact Bill Cheek??
Date: 1999/04/04
Author: jmackey <jmackey@usa.net>

Does anyone know what jail or prison Bill was taken to upon his
arrest
by the federal investigators so we may send him cards & letters? This
way, he will know we are all thinking of him!

Lie #3:
I do NOT "post OVER 350 offtopic posts a month" as you claim.

Dejanews search from 1/1/99 to present:

Messages 1-100 of about 2200 matches

2200 divided by 6 months = 366 messages per month. Do the math.

Lie #4:
> That's the wrong John Mackey. This one's only claim to fame is being
the top off-topic poster on usenet with thousands of off-topic
messages
across

Oh no, I could NEVER try to hold that title. Bill Cheek won that
title
severaltimes over according to information POSTED by YOU. Remember
the
"reality
check" post where YOUR OWN DATA showed that Cheek posted several
hundred more posts on
usenet than me!?!?!?!?!

Below is an abbreviated qoute:

Date | Mackey | Cheek |

TOTALS | 2139 | 2348 |

Current Totals for Cheek and Mackey 1999:

Mackey: About 2200 listed this year
Cheek: About 1303 listed this year

Estimated on topic content
Cheek: 60%
Mackey: 0.99%

No, not if you mean a scanning *receiver.* You would have to add the entire transmitting section, which would be a project for someone highly skilled in radio design, and hardly worth the effort.

Oh, I don`t want to "educate" John. You cannot educate a Racoon beyond a certain point. No , I will leave that task to those who are willing to take on the labors of Hercules.
But I WILL occasionally set him straight, especially when he is contradiciting himself.
As for Conduit, I am really not all that happy with him, either. I butted heads with him a while back. And I would STILL not advise people to send off their hard - earned money to some "official legal defense fund", Which may or may not be legitimate. Like I said, if they want to help Bill, then they should not wait until Bill goes under.
Don`t get me wrong. I like you Smalley, and I have seen you hit the nail right on the head too many times to count. I see you as a man who adheres to his principles, and does everything he can from one day to the next to see that everything is right. I have yet to see any contradiction in your speaking or your character. If you lived nearby, we would undoubtedly be friends.
But ignoring Mackey is not going to get rid of him. It is not just that Mackey thrives on the attention he gets. He has been obsessed with Cheek for over three years. Mackey enjoys negative attention, and seeks after it. Your assessment would be of a NORMAL person, which he is certainly not. What sane person would carry on a tirade after three years, even after the object of that tirade has been gone from the group for over a year ? Even the mere mention of Bill Cheek sets him off. I have seen him respond to Cheek`s AUTOMATED POSTINGS, for Gods sake !
Mackey, in his delusion, sees himself as some sort of hokey "saviour" of the group, in that he is going to keep us from talking about Bill or TO Bill. In other words, he has set himself up as some sort of "censor" on the group. I really don`t understand why the USENET authorities have chosen to ignore this fact for over three years, while the Looney interferes with both Bill Cheek`s freedom of speech, and everyone else`s.
Have a look at my other posting, where I describe Looney -Tunes "pattern of behaviour". This is typical of the obsessed, and he certainly is that. He repeats this pattern over and over, ad nauseum, like some kind of crazy robot. He cannot and will not be stopped by his fellows on the group, and it is my considered opinion that he has made a "Life`s Work" out of this stupidity. Now there is a lofty goal ! You seriously misjudge his mental state, since you are about as normal as Apple Pie, Phil, and tend to think in those terms. So do most people. But after observing him for over three years, I know what he is about.

That's called a learning disability. It's especially difficult to teach you not to post off-topic articles to the amateur radio NGs. You're the one who started this thread, and for some odd reason, you included the ham groups. Why is that? Can you give a reasonable explanation?

We can teach gorillas to communicate using sign language, yet as you state above, we can't teach you anything.

2914. Written decoding software for sound cards?

Newsgroup: rec.radio.scanner
Date: 1999-05-27 00:00:00 UTC
From: MOstrowski <M_Ostrowski@yahoo.com>
Message-ID: <7ijle3$69q$1@ink.msen.com>
Source record: 117147
Cross-posted to: rec.ham-radio.packet,rec.radio.amateur.digital,rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

I'd like to hear from anyone who has written digital signal decoding
software using sound cards.

I'm currently searching for information relating to decoding digital signals
(CW, RTTY, AMTOR,
CLOVER, PSK31, etc) using a sound card. I've used several of such software
packages currently
available for download and I like to try my hand a writing something
similar. I have many years
experience professionally programming both DOS and Windows applications
using C/C++/MFC,
but have never had need to interface to a sound card until now. I'd like
this application to be
Windows 95/98 based but I've heard rumors that directly accessing the sound
card interface is
difficult, if not impossible, under that OS.

Any tips you can pass along that can get me started will be greatly
appreciated; also any info
on books/articles/websites/source code/libs you've found helpful.

Peter, of PSK31 fame, told me that the Microsoft mmsystem.dll
handles interfacing to the sound card. I haven't looked for
info on that DLL but I assume it is available from Microsoft.
I'm also interested so please post whatever sound card interfacing
info you gather.

The problem with programs that use soundcards that decode radio info can't be built around visual basic
as VB is so damned slow.
Thus, soundcard decoder programs require the knowledge of real programmers (C++) which explains why they are so
damned buggy, due to Windows needing thousands of lines of C++ code just to initialise a stupid program (being
sarcastic but you C++ Windows programmers know exactly what I mean).

:The problem with programs that use soundcards that decode radio info can't be built around visual basic
:as VB is so damned slow.

Actually VB 6 is not that slow. Problem is in lack of support for
Multi-threading and callbacks that are required to fully exploit the
potential of mmsystem.dll API.

:Thus, soundcard decoder programs require the knowledge of real programmers (C++) which explains why they are so
:damned buggy, due to Windows needing thousands of lines of C++ code just to initialise a stupid program (being
:sarcastic but you C++ Windows programmers know exactly what I mean).

Well, It's not that bad. But there is function of complexity of
implementation vs. size of the project. For VB it grows steeper
but VB starts at 0 value. C++ starts at some positive number (since you
will need bunch of to put "Hello World" on the screen") but grows slower
with size of the project. To make story short: smaller projects are easier
to do at VB while large ones on C++.

George

I hope you find what your looking for. I would make a sujestion to you.
I would sujest that you try to do this under Linux (i.e. Unix) first. I
think that you would have alot better response with the linux OS versus
Windows. Good luck let me know what you find out.
Thanks Oris

Zombie Wolf wrote in message <7ijh1m$tq4$1@garnet.mint.net>...
>Oh, I don`t want to "educate" John. You cannot educate a Racoon beyond a
>certain point. No , I will leave that task to those who are willing to take
>on the labors of Hercules.

I think even they wouldn't be up to the task.

>But I WILL occasionally set him straight, especially when he is
>contradiciting himself.

Even if that's what he wants you to do?

>Don`t get me wrong. I like you Smalley, and I have seen you hit the nail
>right on the head too many times to count. I see you as a man who adheres
to
>his principles, and does everything he can from one day to the next to see
>that everything is right. I have yet to see any contradiction in your
>speaking or your character. If you lived nearby, we would undoubtedly be
>friends.
>But ignoring Mackey is not going to get rid of him. It is not just that
>Mackey thrives on the attention he gets. He has been obsessed with Cheek
for
>over three years. Mackey enjoys negative attention, and seeks after it.
Your
>assessment would be of a NORMAL person, which he is certainly not. What
sane
>person would carry on a tirade after three years, even after the object of
>that tirade has been gone from the group for over a year ? Even the mere
>mention of Bill Cheek sets him off. I have seen him respond to Cheek`s
>AUTOMATED POSTINGS, for Gods sake !

And I'm not saying he won't! But look at the way things are now. As it
stands now, John comes out saying something so ridiculous you *know* it's a
troll, dozens of people respond out of sheer indignation, and John takes his
time to respond to (and enrage) each and every one. The result is 350+ off
topic messages a month from him alone. I've seen his threads grow to over
100 messages within days!

Now imagine this. John puts out one of his "trolls" and not one soul
responds. John attaches himself to one of Bill Cheek's automated posts, and
no one stops to look. It'll drive him nuts! He's got an obsession allright,
and it is ATTENTION. Look what happened when Bill left, did he stop? Nope.
Now it's the "Cheek-A-Likes" like Blake, you and myself that he's after, at
least to hear him tell it. Bullcrap. He wants the attention, pure and
simple. If it weren't for us, he'd find someone else to justify his jackass

crusade. But if no matter what he did, no one fell for it, well what's left? Without the attention he craves, he WILL seek it elsewhere.

>Mackey, in his delusion, sees himself as some sort of hokey "saviour" of the

Has anyone happened to notice the little "inconsistancies" that Blake posted about John recently? John asked for proof that he was a liar, and got it in spades. I think John won't be back for a while - too busy wiping the egg off of his face. Worth a read if you haven't already.

If nothing more, it proves that John is here strictly for the attention, and Mr. Conduit is right on the money in how to deal with him.

Not that I would want to because it is illegal, but is there any way to monitor cellular images on the AOR AR8200?

Michael,
you can find at least one very usefull source code example
demonstrating sound card programming under MS Windows on creative labs
(soundblaster) ftp server:
ftp://ftp.creaf.com/pub/creative/devinfo
The file I used is
fullduplex.exe
I used this example as a starting point for my DSP programming under
Windows NT using Visual C++ 5.0.

Good luck!

Gerd Niephaus

Source record: 117174

All North American railroads who use radio end of train devices use 457.9375 with the exception of Norfolk Southern. They use 161.115 for theirs. Remember, you won't hear much on these frequencies. If an active one is in the range of a couple of miles, you'll hear a beep every once in a while but that is it.

> ONE CLASS of HAM LICENSE is enough!

Heck no it isn't.
I'm for completely dumping code but there should be at least
a division between VHF and HF classes.
BTW, did you know that if you don't know what you are doing with
ham transmitters, you can cause damage to your body?
There is a reason for the licenses, so you don't fry yourself, give yourself
brain tumors, etc.

2945. Baldwin Park, CA and El Monte , CA PD Freqs...

>You better follow the threads back again. You will find that I DID NOT
>start the inclusion of the ham newsgroups on this thread.

Yes you did. When the above subject line appeared in the rec.radio.amateur NGs, it was your post and there was no "re:" preceding the title. With no "re:" it's indicative that that's the root article of a thread. I publicly asked you then why you felt it was necessary to bring the thread into into r.r.a. and the fire service groups; I received no reply, but I did notice that the fire service NG was dropped in your next follow-up.

The first posting of all variations of the above subject line were posted by you in r.r.a. I *know* they were the first postings because again, with no "re:" preceding the title, that's the indication that the poster (you) have posted the root article of a thread in that NG. (Newsgroup 101.)

So again I ask, why do you feel it necessary to always bring these threads into the r.r.a. NGs? Can you provide a sensible answer?

We can teach gorillas sign language, but we can't teach you not to cross-post to the r.r.a. groups. Why is that?

Jeff KH6O, and your friendly rec.radio.amateur working-group, helping the keep the r.r.a. NGs useful, informative, and enjoyable.

I received a good quantity of coax (over 300 feet) marked Comm\Scope network cable 5901 RG11\U type E82833 14AWG.
Is this stuff any good for use as a scanner feed line? The price was right (free, leftover from the guy who wired our hospitals monitoring system). I have heard that impedance mismatch or poor shielding can cause significant signal loss,etc... Shoud I use it or get invest in something else?
Thanks in advance everyone.

i own a pro-46,60 & 2022.

46- 100 channels -no cell- great images
60- 200 channels -wide coverage -200 ch.- triple conversion
2022- 200 channels- full cell

the pro-46 is by far the most sensitive especially in the 150-170 range
(i would like to hear other opinions of price vs. sensetivity etc.)

i have become infatuated with the icom r-2 by reading postings and
surfing, particularly at the strong signals site.

what scanner/scanners should i sell to buy r-2, or is what i have good
enough?

please feel free to post an opinion on any of the above mentioned
scanners or the issueof pice vs. sensetivity

thanks,
der springer

Too bad you're not my neighbor so I could convince you it is
not worth keeping! ;-) Check out a report on Rich's website:

http://www.strongsignals.net/htm/co-ax.htm

I'm using 50' of RG-6/U connected to a discone antenna. If I had
better cable, I'd use it, though I have no complaints about the
reception with what I've got.

Try adding A good freq. in it's place. I dont actually think you can get all 0's in a channel. When I had an 855 I put 111.0 in place of an unwanted freq.

Sorry I cant be more help.

Whenever lightning strikes near my house, the television displays a little static. This got me to thinking, is there any specific freq.'s that lightning can be heard on a scanner. Is there any other natural phenomena that can be heard on a regular scanner, or do you need on of those exotic thousand dollar setups? Thanks in advance.

Check back issues of N&V magazine and Weeder Technologies. I will be building one in the next few weeks so that I can enable audio when I call in on 2-meters and enter a few tones. That way the scanner can monitor the local repeater all day, but only output audio when I want to call my son on the radio.

Check back in a few weeks if you don't find one and I will share with you plans for what I come up with. What do you need to control.

George hit the nail on the proverbial head. The problem with signal processing in real time is that you need a real-time processor. Unless your eating all of the processing time this can't be done reliably in Win9x.

The second problem is that Win9x does not let you talk to the card at the hardware level, as well as to the DMA. You would need to do that to effectively perform near real-time capture and hold processes of any sound frames you're trying to deal with. Best bet there is to write a 16-bit dll, which will allow you to do these things.

There isn't an attenuation feature on the Pro-90. It sounds like your radio is broken or defective. It is possible that interference from a very strong local radio signal is causing the problem. This isn't very likely but it is worth investigating. You might remove the back of the radio and look to see if the BNC antenna connector is soldered to the circuit board.

Most railroads use 457.9375. Some trains use two-way EOT's to activate
brakes from the rear end, and the locomotive transmits commands on
452.9375. Norfolk Southern uses 161.115 and regular everyday DTMF. (UHF
EOT's use a different data protocol.)

Uh...not to quibble but, "scanners" are...uh...scanning RECIEVERS. I suppose it would be sorta feasable to boost the local oscilator power up somewhat, and sorta use it as a transmitter that way, but I don't know why you'd wanna do that.

Don't wanna sound snippy, but I think I misunderstood your question.

Thanks, people.

:>
:> My bc895xlt gets cellular, 854.300. Is it illegal?
:>
:> >
:Why would that frequency be illegal? The base side of a cell phone
:frequency, in the States is between 869.0000 to 8944.0000 Megacycles.

8 gigs!

:Now, the interesting thing is that alot of the older TV sets could tune
:past channel 69, well guess what folks.

Do you mean a lot or not a lot? That's the problem with made up words.

:That means that those TV sets
:couls tune in these calls even though the sets were designed to recieve
:the audio frequency of the TV station even though the frequency of a TV
:station signal is much wider

Under the draconian new regs there a TV is exempt since it does not
scan two or more channels.

We have no laws against scanners with full cellular coverage.

I DO post on topic. YOU have NEVER posted on topic on this NG!!!

See below for a example of a typical on-topic
post from me.

****

Subject: Re: Cable Question
Date: 1999/04/01
Author: jmackey <jmackey@usa.net>

Bud (the original) wrote:
Our resident electronics expert, John Mackey, has said in the past

> that after 2-3 years of exposure, the outside covering of coax will

> be too damaged to be useable.

Bud, thanks for the plug & support, but that is not exactly what I
said/Over time of exposure to UV, coax that is NOT UV resistant
(like RG-8, 8214, 9913, RG-58, etc) will become more & more
lossy resulting in permormance decreasing. RG-214 & RG-213 are
UV resistant coax. Se a qoute below from Rich Wells stating that
UV is an issue to be of concern, as I have been said in the past.

From: "Rich Wells, N2MCA" <n2mca@strongsignals.net>
Newsgroups: rec.radio.scanner
Subject: Re: Cable Question
Date: Mon, 29 Mar 1999 06:53:02 -0500
SNIP
inside the cable can degrade performance. If all connections are
properly sealed and it can stand up to UV, then you should be all
set for a while. Strong Signals,
Rich Wells N2MCA

I have considerable luck using the Discone antenna in the attic.
Overmuch sometimes. I regularly recive the Rochester MN. Pd channel 2
over the local Sheriff channel3. Distance to Rochester is about 60 air
miles. I also have a OCF dipole and a 450 yagi up there. I pull the
local metro PD's on 460 from over 20 air miles with the discone, and
the OCF is great on 30-50 MHZ.

More general info here: (I gotta update this page)
http://pw2.netcom.com/~kimeyer/index.html

PRICE DROP !

I have for sale 1 Cobra 2000 base station CB with the speaker.
Radio has been modified to cover from 26.815 Mhz to 28.045 Mhz. Radio transmits 20+ watts, clarifier has been opened. I have received several reports of good signal/audio from stations that are 30+ miles away from me. I am not real technical so beyond what I have told you, I don't know anything else about the radio.
I would rate this radio as an 8 out of 10. No scratches ect that I was able to find. Also included is the original manual, original 1 year warranty certificate, copy of service manual.
From what I have seen and heard, the 2000 is one of the top of the line most sought after radios that was ever on the market in its day. After using it for a brief time, I could see why as it is an excellent radio.
Price is $250+ shipping costs, prepaid via USPS money order. References available upon request. I am open to offers, however please do not insult my intelligence by offering $50 or $100 . Reasonable offers will be considered.
Please contact me at jces9033@hotmail. com if you are interested in this fine rig.

An ideal scenario would be if the hiker also had a GPS. The GMRS operator (or whatever) could relay exact coordinates to the authorities, who could fly right to the lost party. I would presume that most law enforcement helicopters are equipped with GPS these days, considering how affordable it is. And certainly, any serious backpacker should be.

Of course, the obvious question is, if the hiker has GPS, why are they lost in the first place. To which I say, like four-wheel-drive just gets you "more" stuck, GPS lets you get "more" lost.

That's called a learning disability. It's especially difficult to teach not to post off-topic articles to the amateur radio NGs. You're the one who started this thread, and for some odd reason, you included the ham groups. Why is that? Can you give a reasonable explanation?

We can teach gorillas to communicate using sign language, yet as you state above, we can't teach you anything.

Has anyone heard of any mods for the Yaesu VX-5? I noticed about 5 solder jumper pads on the main pcb when I installed the barometer-altitude module.

Dear Mike,

The most comprehensive source that I have found (excepting purchase of
an SDK from Microsoft) is "Windows 95 Multimedia & ODBC API Bible" by
The Waite Group Press - Richard J. Simon, Tony Davis, John Eaton, and
R. Murray Goertz.
It has chapters on Waveform and Auxiliary Audio and on Multimedia File
I/O. Those two chapters are really all you need to do everything that
needs to be done for a mode like PSK31.

If you can locate a "Books-a-Million" store, they may be able to help
you - I got my copy at 50% discount - normally $54.99. CD-ROM is
included.

Haven't visited that site in a while...last I checked that site no longer exists.

The San Diego Police Department frequencies are sort of easy. Their frequencies are in the 856-860 MHz range with .000, .025 and/or .050 as suffixes.

May want to also try 854-856 as well, just in case you don't get all of them. I will have a full list of the SDPD frequencies shortly...if not tomorrow.

Except that's MF (USB), not HF. For HF, use 8364 kHz; it's an
international Safety of Life frequency, for both the maritime
and aeronautical services. The USCG and satellites monitor it.

That's the transmitters identifying themselves -- they're sending the PD's
callsign (required by law). It's done about every 30 minutes. The code ID
is built into the transmitter's controller -- it's done at the transmitter
site -- the 911 center has no control over it.

The callsign will be of the form three or four letters (beginning with
a K or W, followed by three or four numbers.

Yes! You can evesdrop on the atmosphere if you have access to a VLF
receiver. Folks make a hobby out of listening to frequencies below
100 kHz for nature's squeals, shreeks, and whistles. Post your inquiry
to rec.radio.shortwave -- the gang on there will provide more info.

The Pro-60 uses NFM only and not WFM. Without looking closely at the specs for the filters, I would have to say no to the mod for SCA. You need a wider filter to pass all of the needed signal for your FSK decoder chip to process. Why bother modifying a scanner for this when you can usually modify a simple FM radio for this option.

And even then, "real time" is a bit of a joke. For example, the best resolution
and lowest timer interval you can get out of the high resolution timer is 1ms.

Fah!! I'm not against Linux (I run it here myself), but the difference in available tools makes comparison less than likely.

Best advice: write the FFT and multimedia modules as OCX's using C++, and build the front end using whatever trash you like. The FFT module is very small, about 300 lines. The MM interface is similarly small, about 100 lines.

Michael.

That is one of the things you run into when you get hooked on scanners.
each scanner has something different about it so thats why you end up
keeping more than one. you better keep them all if you can afford to.
I have about 25 I am ashamed to admit and I love them
all...Jerr1919

you should subscribe to the vx5r mailing onelist.com. you can go to www.onelist.com and search for vx5r to find the mailing list. it is very active and will allow you to find out a lot about that radio

You can remove the solder balls from some of the pads to open up the transmit, but the US version of the radio will not do cell. If you download and use the EVE programming software, the radio can be modified with the software to go out of band without removing the solder balls.

And I'll add that morse is commonly used for identification because
people can talk over it and neither reception of the morse or the
conversation on the air is affected.

In addition, morse helps because in case the audio is distorted, the
signal will still be identifiable. At work, we once had a very bad
case of what sounded like interference at a receiver site. The signal
was very garbled, but I was able to make out a morse identification in
the background. As soon as we looked up the call sign we knew who it
was, where they were, and what was going on (it wasn't their fault, we
were experiencing intermodulation distortion).

With PerformanceCounter API and high priority levels you can get better resolution and response. Win NT will be much better choice for time-critical applications. The reason for that is Win95 memory management is designed to better utilize physical memory at the expense of response time. For sound processing NT offers more then plenty real-timeness unless you want 44Khz resolution stereo (don't need that for SWLing).

Don't know much about Linux but am very curious about it.

>If you're well-heeled, you can always buy a "Stormscope" -- a piece of
>aviation equipment that displays lightning strikes on a radar-like screen
>(a passive "weather radar" if you like).

Below is an old file I've hung onto for years -- I think it originated on
the QRP email list):

Subject: Re: lightning detector

Way back when...i used to use a oscilloscope tube and had one dipole
orientated east and west connected to the horizontal deflection plates,
and one orientated north and south connected to the vertical plates. With
a little experimentation i could tell from what direction the
storm/lightning was coming from. All ya need is a scope tube like a 3BP1
or so and the circuit to power it up and a couple of dipoles.
73 Art WB9HNJ

Actually a couple of three foot diameter 50-turn loop gap antennas with
a small vertical antenna to provide a blanking signal to eliminate the
directional ambiguity (i.e. is the received signal to the north or south
of the east-west loop) will work quite well. Direction can be read from
the CRT face and relative distance can be estimated by signal strength
[sort of :)]. There is a site however, http://www.boltek.com that has
a more elegant solution. His system will interface to your PC, record
and display realtime strikes.
(Second author unknown)

You could do the above with an old TV set. I invite someone with
more experience to fill in the details. You're dealing with lethal
voltages here.

Jeff KH6O

> > EOT's use a different data protocol.)
> >

Hot box detectors are a different animal altogether. Some transmit verbal messages on the radio, these almost always use the locally used road channel for the track involved. Talking detectors are stationary devices that transmit information on a train as it passes it. They often detect hot axles and wheels ("Hot Box"), high-wide loads, dragging equipment, or some combination of these.

Some use signals to indicate a problem. These signals obviously would need to be placed a mile or more beyond the detector to allow a long freight to be fully checked and the indication sent before the head end passes the signal. These are rare. (DRGW used to use these in CO.) Before EOT devices were the norm, caboose crews could also watch for the signal aspects for these detectors.

Some detectors send the results to a tower or CTC office. The dispatcher or operator would read the results and notify the crew of a fault. These are getting more and more rare as railroads consolidate dispatch centers and towers close. (Roundout tower on the old Milwaukee Road near Libertyville IL used to monitor the detector a few miles north at Russel on the IN/WI state line. This has since been converted to a talker).

Some of these use PL tones to allow for easier detection of faults. CR detectors use one PL tone when no fault is noted, and a different one when a fault is found. The second PL tone alerts in the CTC office, and may even trigger a recorder.

I often thought that railroads would be better served by having a specified Detector radio channel, to reduce interference to and from the already busy road channels. Perhaps a UHF channel could be allocated for this purpose, and locomotives equipped with a receiver. Of course this would be expensive and perhaps impracticle, but who knows...

I bought an AR16 and while it's not the best scanner around, I really like its size and some of the features. You really need the computer interface to set it

up, but it is simple to build yourself and the commands are simple and can be inputted by hand with a simple terminal program. I have not tried an Icom R2, but I understand that the PC interface is not published and you must buy a program.

gee william...Thank you for
posting me first. What
a genuine compliment.
I cannot thank you enough
for the notoriety this posting
will do for me ... can i be
your friend bill?

by the way: Blake Bowers hates
my guts. How can you put him
in the same "notoriety-list"
with me. he must be rolling
over in his GRASS skirt.

or blowing in it.

William...you really make my day.
What an honor.

Gee. over in rec.sport.swimming
they call me the BUNKER GUY. what
an uplifting experience to remember
when I am out doing video and stop
and think about your pungentness
in making me NUMBER UNO.

OH you are a very special guy William.

gosh. and I thought being a good videographer
seen on tv often was my calling. to think you
put me into this nirvana-ized world of LE STINKERs
you love to hate.

What a life? What a guy you are bill?

did i tell you Bowers just sent me an E-mail
telling me to go to your address and obfuscate on
your front door-bell?

To bring this to light is so refreshing. To
be able to die and put this on my crypt.

William...who else have you saintized? It
must be a short list as you must be.

William...mahalo. Aloha. Ono Ono post brah.
you one wiki-wiki guy who is a legend in your
own mind..but to do this, wow. I am just
unable to express my appreciation for your
being so damn wunnerful. I will print this
out and send it out with all resumes I send
out or when peole ask me for referneces....

you just have no idea as to how it is to
be number One in your assessment-schtick.

Can we send this in to DAVE's TOP TEN.
I really think it belongs with the DAVE-man.

How much do i have to send you for it
autographed William? Does that include
a "phlem" sample from your brain stem

question mark.

OH William, you naughty man you. are you
sure it is ok to be so nice to you.
another question mark

william in small caps to keep the mood
up to snuff.

william...I salute you. will you be going
on the lecture circuit soon...i'll come and
be your friend on stage with you and then
we both can count the money we will share.

I don't know if I read the same article you did.

The 'scanning buff' was a 'ham' that had previously pretty much
identified (but not absolutley) the individual responsible for some
illegal conduct on the air. And from what I read in the article,
all the ham did was notify police of the fact that a new 'event'
seemed similar to a previous event, and the police investigated
for 4 days.

The article also refered to the 'scanner buff' as a 'volunteer ham
radio monitor'. This to me implys he may have been an 'OO'.
While I don't think the OO program is very well run, and the
OO's I've had personal contact with are pretty much duds,
they do carry some official weight.

>Can someone please help me? I don't understand Trunked Channels a bit. I have
>the 28 trunked channels for Charlotte, North Carolina. And I have the ID
>codes, but what are those? How can I get a certain police district. My police
>district code is 8988, What do I do with that? Thanks a lot.

you must take a few deep ones...

now relax.

you have to read the instructions
very carefully.
it's in segments.

you must follow each suggestion
to the T. no stopping to take
a pee...just do it and do it
right

you look at booklet and
see how to do it.

you then read just one
section of instructions...then
so it.

then you read next set of
same...next idea.

then you do it...

after you do it and you are
ready to search...

you must hit the
button that says

"trnk"

then you load the
numbers you have collected
or seen in the book and
then when through\

you hit enter.

then you hit scan and
you see them all before
you...

read the booklet three
times from page one
to page infinity.

then take it one step
at a time as to what
it says to do...

you have to do the things
over again...once
to get them in'
and once to get them
in for trunking...

then you boogie

bill conduit
etc.

trust me.

Howdy's:

Have a Mirage B-108G 2 meter amp with preamp. I never used it, bought at dayton hamvention then ended up getting a 2 meter mobile, so didn't need the amp. Needs a power cable. otherwise a 10.

Looking to trade said unit for a PRO-26, or BC-3000, or IC-R10, or PRO-60 scanner.

or will sell outright for $125

>>>>>>>>>>>>>>>>>>>>>>>> <<<<<<<<<<<<<<<<<<<<<<<<

Jeff:

It's really not to difficult to accomplish what you desired in your post. The answer is, certainly, yes. You need to pull out of the scanner all the proper LOs (local oscillators), mix them in the proper order (using doubly balanced mixers), and modulate the final result with the type of modulation and information you desire. You're there! You may prefer to apply a little amplification to the result to render the "signal" a bit stronger, but that isn't too difficult, either, in these days of MMICs and hybrids. Trivial!

I used the panel mount female RCA jack on my 895 (sorry, no RS part # handy). I hated to do it, but I mustered up the courage to drill a hole in the back of the case for it, which was the hardest part. Then I took a .20 gauge (I think) insulated lead wire and soldered one end to the tap point *on the bottom of the board - much easier than the top*, then soldered the other end to the center pin connector of the RCA jack. I grounded it by using the grounding lug on the outside of the case, connected to the same screw that grounds the aux jack. That's all there was to it - pretty easy.

Another way, if you don't want to drill a hole, is to cut a RCA cable and peel back the braid about 1/4" or so. Then trim away a little plastic off of the center conductor. Solder the center conductor to your tap point, then solder a ground wire from the braid back to the chassis. Wrap the exposed braid and solder connection to ground with some electrical tape to prevent a short. Then you can dangle some of the cable out the back - most scanners have little gaps at the corners that the wire can sit in without being pinched by the case. Leave just enough out for the plug - anymore than that just says "yank on me" to any little kids and animals you may have about.

Hope that is helpful, and a last word of caution: Be very careful to tap the right point, and double check your work before firing it back up. The scanner you save may be your own.....

Good luck,
-Phil

Can anyone help me with Blue Angels and Thunderbirds frequencies in use
so far this airshow season?
So far for the Blues I have 263.350 275.350 and 345.900. Someone
mentioned 141.850 for the Blues too. Would this be AM or NFM? I know
141.850AM is used heavily by the Thunderbirds, but as of now that is the
only frequency I have for them during this season.
Thanx!
Happy Scanning
Mike

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Just a little note to all listeners in the Vancouver
B.C. / Lower Mainland area.

It appears that the Vancouver Police have moved on to thier new
866/867 Mhz W.A.R.S frequencies and are transmitting totally
digital(Oh well)leaving their old 143-144 mhz system dead.
There was some comms being heard on 143.385mhz but it was I think
a simulcast of some sort from thier new EDAC system.
One officer made reference to switching to simplex----no more
comms were ever heard since then.
The major crime alert tone was also heard at one point on one of thier
old
frequencies too.

If anyone else hears comms on thier old freqs, please email me
or post info to newsgroup.
Thx.
jmacneil@direct.ca

I got it as a gift and I already have one. I never took the radio out of the box.
The radio also comes with a brand new Diamond srh-519 sma antenna which costs $35 and a Maha MH-C204F rapid charger for AAA or AA nicads/nmhd batterys. The cost of this plus 4 nmhd AA cells was $30. I am asking $200 for the whole package. Remember this radio is brand new and was never used. I will pay shipping, if interested please email me.

Thanks

Tony

Blake, get a grip on reality. Those are "amateur radio license tests".
I have NEVER said I "have 5 FCC licenses".

I'm really surprised it's such a chore to implement this stuff under Windows. Not to turn this into an OS war, but reading sampled sound (and playing sound for transmit mode) hasn't been a major problem on the Mac (for my MultiMode). Perhaps it has to do with Microsoft's implementation. I haven't done any serious Windows programming (I sometimes consider porting MultiMode over to Windows, although this discussion seems to imply that the sound I/O isn't trivial), but it's quite simple on the Mac. You decide which sound input device to use, set the sample rate, sample size, etc, and that's it. Specify how many samples you want, and your callback procedure gets called (at interrupt time) when they're ready. The sound input is buffered, so nothing gets lost if it takes a few extra milliseconds (or even seconds) before your procedure gets called again. (Perhaps because you're doing some special processing and disabled interrupts, or aren't ready, for whatever reason)

After first writing my low-level sound input routines, I haven't touched them in a year of adding new modes to MultiMode, except one time, to handle the newer G3 Macs that can only sample at 44 kHz.

Packet will more slightly more of a challenge, due to the quick turn-around times required, but it still looks quite easy.

The FCC regulates EVERYTHING that can radiate interference. They've forced electric shavers off the market until modified to not radiate excessively.

Superheterodyne recievers (essentially all of them, these days) have a local oscillator or oscillators, which can radiate interference if the design is bad, and can be picked up even if it isn't for a block or more, depending on what antenna you have connected. Before the days of programmables, when scanners were pretty much 10.7 IF or 10.8 IF, with crystals, you could find out if someone in your neigborhood was listening to the local police channel by checking the LO frequencies, and hearing that 'psht psht psht' as the scanner swept by the channel, stopping whenever the police transmitted.

Hi Chris,

Long time - no type...

You're right, this could very easily turn into an OS war. Believe it or not, the Mac's (actually Motorola's) interrupt structure is a lot more efficient for these kinds of things. What you say is essentially how you would program a sound card if you were to use Window's built-in sound interface. However, Window's sound drivers are still tied back to the clunky IRQ scheme still underlying in DOS. This is part of the speed issue.

I think you screwing Bill like you did was an attempt for you to have this channel for yourself
instead of having to share all the attention with Bill.
I think we should all killfile you as a protest in your activity against Bill.

Interaction in DOS is/was at a hardware and firmware level. Thus, SB
compatibility was a significant issue in the bad-old-days. During
software installation, the setup program looks for the SB environment
strings, or queries you for the IRQ, and I/O and DMA ports. Some "game
engines" supply sound libraries, almost always supporting SB. Quality
varies. The most stable of these is Win9x. :)

Michael.

This approach is not cheap, but very interesting.

Buy a TI 'c6x01 eval kit ($999 or 1450, dependeing upon whether
you buy the fixed point or floating point unit). The DSP eval card
plugs into the PCI bus and is downloaded via the PCI bus in WinNT
(I'm not sure whether it works with Win95/98 or not). Included is
a C compiler, IDE, emulator and download software. The DSP card
has line in, line out and mike in audio ports.

See TI and DNA Enterprises for details.

The BC350A is the same scanner functionally without the 800-900 MHz range. The manual for the BC350A will tell you all you need to know on the funtionality of the BC700A. Just insert the 800-900 MHz range in the specs, etc. The link for the BC350A on-line manual from Uniden is below.
http://www.uniden.com/docs/service/pdf/BC350Aom.pdf
Hope that helps.

Source record: 117069

Hi folks...

Picked up a yard sale "goody" today...a Regency ACT-T16K desktop scanner. 16-channel, with touchpad and of course, no manual. (Hey...whadya want for 5-bucks). No, it doesn't work...at least I don't think so. Can't figure out how to program it. There's audio (static) and it will move thru the 16-channels. A weather channel is set as priority, and I can't figure out how to get it out of priority mode. One of the touch pads says "SP SS."

Anyone have a clue as to how to set this thing up, assuming it's not dead? It also has a place for a 9-volt battery, but I'm assuming that's to keep the frequencies locked in when it's unplugged. The guy I bought it from did have the weather station audio, but I can't get it now. Any help or web site where a manual might be available greatly appreciated.

Forsale: Realistic Pro2037 base/mobile scanner. Unit is in good condition and works fine. Comes with a RS telescoping antenna (motorola plug) and BNC connector.

Frequency Coverage:.....30-54 Mhz (in 5 kHz steps)
118.0000 - 136.9750 MHz (in 25 kHz steps)
137.0000 - 174.0000 MHz (in 5 kHz steps)
380.0000 - 512.0000 MHz (in 12.5 kHz steps)
806.0000 - 823.9875 MHz (in 12.5 kHz steps)
849.0125 - 868.9875 MHz (in 12.5 kHz steps)
894.0125 - 960.0000 MHz (in 12.5 kHz steps)
Channels of Operation:..200 Channels in any band (20 channels x 10 banks) plus 10 monitor memories

Asking 120.00 plus shippng (should be about $5.00). Will have pictures in a few days if interested.

Message-ID: <MPG.11ba7500f4795e0a989680@news.crocker.com>
Source record: 117072

A local water department is sending packet-like data bursts, and
I'd love to know what the heck they're using to do so. The signal appears
to be FSK (512 baud, 900+1500hz tones). I've never run across any other
digital signal that uses these parameters; does anyone have any idea what
this might be? My best guess is either telemetry or security, but I'm
more interested in what format this might be or if anyone's seen
equipment that generates a similar signal in use somewhere else.

Message-ID: <n9jig-2905992222320001@56-ip-499.theramp.net>
Source record: 117077

The annual CARMA Picnic and regular June meeting will be on
June 5th at Argonne Woods this Saturday, June 5 1999.

The meeting will start at 1:00 PM sharp in the Shelter. Picnic activities
will start in the morning, perhaps early. Come as early as you wish, set
up shortwave or scanner radios and antennas, and bring grills, coolers and
other goodies. Should the weather be absolutly horrible, we have reserved
an inside room in the Argonne facility.

A map of the area as well as directions are on the CARMA Web site,
http://www.theramp.net/shabec/carma.htm

This is the 20th anniversary weekend of CARMA/RCMA-Chicago, and our own
John Arendt (a founding member of RCMA-Chicago) will present a
retrospective of the last 20 years of club activity.

Please make every effort to attend some portion of our day in the woods. I
will be demonstrating E-Trax, the EDACS following software for the OptoCom
receiver, as well as Probe v5.0, the operating software for OS456, OS535,
and OptoCom receivers. Other toys will be on display as well.

This is the Standard CCR-708a/AX-700 receiver with a built-in real-time spectra display. It covers from 50-905MHZ.

Please check out the beautiful pictures at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=110477468

Please also see my other items which include Brand New scanners from the UK: Shinwa SR-001, Icom R-2, Trident TR-4000. More scanners and SW receivers will be posted in the days to come.

Hi,

The R2 can dump data to a computer using the clone option. I'm looking for a good description of the contents off that dump. I already found out some things myself but not all field are clear.

i want to use the dump to creata a memory /search bank editor at my PC.

Any help is welcome,

Please only post to newsgroup, my e-mail is invalid.

I have also been eyeing the R2, but I'm skeptical because of no built in battery charging, 10 channels per second scanning, the type of antenna connector, and reported short battery life. I'm really having a difficult time deciding which scanner to get for around $300 give or take. Doesn't matter whether base or handheld. I really like my Pro 2027 but it doesn't have any frequency lockouts. The R2 certainly has a lot for the money it seems to me though.

Hi! It wasn't mentioned in the thread re: SDPD freqs.: just so you're aware - they're on a trunked system. Most San Diego county agencies are on a trunked system. So...while you can hear them on a conventional scanner, you won't be able to follow their conversations. Feel free to e-mail me with any questions. The site www.socal911.com was down for awhile; it is now back up!

3168. Re: Trunked Channels

Newsgroup: rec.radio.scanner
Date: 1999-05-29 00:00:00 UTC
From: radio911@aol.com
Message-ID: <19990529000143.23190.00006577@ng-cm1.aol.com>
Source record: 117105

Hi! To monitor ANY trunked agency, there are several steps (just to confuse us listeners!):
1. Detemine TYPE of trunked system - Type 1 or type 2 - Usually found in frequency guides.
2. Determine if analog or digital system.
The manufacturer of their radios is a good clue. IF digital, you're out of luck. No scanner monitors digital signals. Hopefully, it's an analog system.
3. Assuming analog, put your radio into TRUNKED mode, following instructions. However, most manuals don't stress this carefully...BE SURE TRUNKED is flashing while entering individual freqs.
4. Enter 28 frequencies - yes, it's time consuming, but each one is part of the system.
You should hear "white noise" on several of the frequencies-that's the control channel and it changes day to day (from one freq. to another).
5. When all freqs. have been entered, you should be able to SEARCH for active ID groups, like 8988. Again, you MUST be in trunked mode. ID codes will display when a transmission is in progress.
6. If you are able to obtain a list of ID codes for your area, you may wish to manually enter them - much like entering the frequencies.
Good luck - e-mail with any questions.

If you don't care about shortwave coverage in a scanner then the Sony SC1PC is a great buy for the money. I have the non-PC version and it works very, very well. More sensitive than a 3000XLT, but with less intermod and images.

Please accept my apologies...it looks like crow is being
served on the menu today. I do not have a Pro-60 but have used one a
few time a while back. I should have referenced this but I thought
that my memory still served me well.
I cannot find much information on the Discriminator/Detector
IC that is used in the Pro-60. It is made by Toshiba and is used in
the newer Sony scanners also.
Sometimes it would be possible to tap the high side of the
squelch pot and get the signal before it is filtered.
Once again I must apologize for my mistake. The Pro-60 is out
of the realm (Don't have a Relm either) of my collection. I should go
back to the scanners that I know.

Hello,

10 channels per second. Ha, that in itself should eliminate this scanner from anybodies consideration. That would be pure torture and no person, place, or thing should have to suffer like that. After that statement I really should say something positive. What you have is better. (I am refering to der springer's three scanners. The 2027 is probably better too.) If you really must spend $300.oo then you might want to be the proud owner of a Yupiteru MVT 7100 1000 channel, no gap full coverage scanner from Javiation at only $265.00 including shipping. Of course you will also have to suffer with excellent service and support.

Happy Scanning
Rick

One of the nice things about Win95/NT/OS/2/Linux is that you don't have to write low level code to access the sound card. The drivers take care of it, and it should would on all types of sound cards. One of my biggest peeves is that most of the sound card software requires a SB16 or 64AWE sound card and doesn't support anything else since they use direct hardware calls.

Decoding RTTY doesn't need real-time processing. Sure, VB isn't quite up to snuff for it, but it does make a nice front end so you don't have to spend a lot of time writing C++ code. Use a DLL for all the signal processing. Buffers can take care of any processing lag, although decoding RTTY isn't exactly "intensive".

Gates Energy Products is long gone - and any remaindered Millenium cells
on store shelves are likely to be so old that it does not make sense to
buy them - there are MUCH better products on the market now.

The assets of the company were acquired by Eveready. Rumor has it that the
newer AA cells (with the dimpled anode cap ... look familiar?) are the
Millenium formula.

For the price, I think it is a good all-round receiver. Small size,
well built, lots of nice features and good performance. Features I
would improve would be scan rate and improved selectivity. I enjoy mine
as a walk-about radio when I might be tuning in anything from the DC to
daylight range.

I use a RCA jack as the dis. output on my PRO2006. I would rather have used a 1/8" phone jack myself, so I switched. To my surprise, the 1/8" phone jack didn't work It appeared to put a heavy drain on the radio, the radio would no longer close squelch or scan. I then tried a different model 1/8" phone jack, and got the same nonworking results, so I went back to the RCA jack.... now no problems again. I can't understand this, a jack is merely a connector (I was only using a two pole jack, not the three pole open/close circuit model), but I couldn't make the phone jack work. Not telling you what will or will not work, just my experience.

>> From the ORIGINAL Trojan Horse!
>Since when do TV station broadcast in one colo(u)r as the name
>Monochrome would imply.

Monochrome does not mean one colour! It means monoCHORMATIC!
On a grey scale from black to white!

>Heck, even Black and White is two colo(u)rs.

Yes, but we are talking about chrominance here, not "colours."
You don't seem to have learned the difference!

>By the way, the best Black and White is what is know as a Twistee cone.
>That is when they combine Vanilla Ice Cream with Chocolate Ice Crea.

Sigh - again, chocolate ice cream is BROWN, not BLACK!

Maybe you are colour blind. Though I rather suspect what we have here
is misperception of chromatic DENSITY!

The problem with what you're saying is that the drivers are only meant for playback and recording in a certain format - NOT the kind of FFT processing that's required. This processing is also not available in the standard sound dll.

> Decoding RTTY doesn't need real-time processing. Sure, VB isn't quite up to
> snuff for it, but it does make a nice front end so you don't have to spend a
> lot of time writing C++ code. Use a DLL for all the signal processing.
> Buffers can take care of any processing lag, although decoding RTTY isn't
> exactly "intensive".

Disagree. It's a lot more complicated than you think. There's not just the decoding part that needs to be done here. There's also the issue of discriminating the desired tones from the rest of the clutter and noise that you're passing through there. You need FFTs to do this since zero-crossing techniques just don't cut it in a real signal environment.

Once that filtering is done, only then can you start decoding the signal. I agree that some buffering is required, but you only have so much buffer space for windowing an accurate capture and hold function. Sooner or later if the processing isn't fast enough, you will have a buffer overflow and will lose synchronization. I've done this with single-processor 486s, Pentiums and Pentium II machines. They all overflow at some point when trying to do this with the standard interfaces to a sound card.

Since we're not talking about true multi-processing operating systems/environments, the signal processing is too intense for the results to be refreshed to any Windows user interface (especially with VB). This may be a bad analogy, but the result is similar to getting dropouts on RealAudio. If you're dropping large chunks of data during the buffering process, what's the point.

The bottom line here is that sound cards were never designed to be true signal processing chips like the TMS series. If people want a real decoder in their machines, they need a different card that's going to do the extra processing for them rather than rely on their main processor to do it for them.

Ham and CB are transmitting devices. They can also emit RFI. Scanners are receiving devices, just different frequencies the same as shortwave radios. I'm surprised the FCC doesn't regulate shortwaves either, or do they now?

DOS is conspicuous by its absence. Aren't there DOS drivers available
for soundcards? Are there standard DOS calls available for soundcards?
If not, could we come up with some? How is/was soundcard interfacing
handled under DOS?

Share what you know. Learn what you don't.

Good grief! Use aluminium tubing, it is lighter, stronger, cheaper, and works better than stainless steal.

If I were building a discone for VHF, I woul use copper screening for the skirt and hold it in position with a ring of coat hanger wire soldered to the copper screen.

nero <nero_b@my-deja.com> schrijfbewerkingen: > Greetings,
>
Dear Nero,
Try to find a copy of the German "Rothammel antanna book" It describes
the design of discones. It seems that nobody knows that the impedance
(thus SWR) of the discone is reasonable constant over a 10:1 frequency
range (that depends very much on the sharpness of the point of the cone
just under the disk) and the distance between the disk and the cone point
The swr remains constant, but the radiation pattern not! At 2 times
the lower cutt-off frequency, the discone is looking to the ground, and
at higher frequencies the pattern is so much distorted, that a 6 dB
loss with respect to a vertical dipole is normal. That's the reason,that
professionals (discones are used for airfield direction finders) use
discones to 1.5 till 2 times the design frequency. For frequencies
above 500 Mhz you have to use solid metal discones, otherwise (with
aluminium rods) the loss becomes even greater. The length of the cone
doesn't have much influence on the impedance. It's is of no use to
give them different length's. For the bands you want to use the discones
it's better to make a discone for each band! Hope to have been of help,
regards, PA0WBK

> A friend and I are working together to design a VHF/UHF discone
> antenna. We are pretty much complete with the hub design and are

From: Shiva Nataraja <removals1@iname.com>
> Can you be more specific about the "speed issue?" Are you talking

Look, you can set the card to "record" and fill a buffer via the APIs. The way the APIs work, an asynchronous callback *message* (essentially and event message) is sent when the buffer is filled. Keep in mind that the MMSystem and MCI APIs were not designed for anything past the transfer of this data either to or from a file system. Also, depending upon what the computer is doing at the time (maybe you're also downloading a large file off the Internet, trying to access a newsgroup using OE5 <G>, or even processing the data, whatever) that message is not enough to ensure consistent processing of buffer chunks. If the processor is busy, more than one message can go unresponded, and you lose data. Different latency than you asked about, but nonetheless that's the way the API works. If the API were such that a specific routine were run synchronously after each buffer fill, that would be a different story.

> rather the algorithm, the implementation of that algorithm, the
> processing speed of the CPU, or some combination of these. As noted in

This is the other part of the problem, since they go hand in hand. Assume at this point that the buffer is essentially filled with signal levels in the time domain, ready to be used. You still have to convert that data to the frequency domain (FFT), optionally filter it, determine the levels about the region of the mark/space frequencies, and buffer that. Another process has to then synchronize and interpret the resulting mark/space stream. On top of that, all of this processing has to compete with other processes that the computer is doing (see above). On 486s, you barely have enough overhead just to perform and display a 4096-point FFT at an acceptable refresh rate. Even then, if you drop a chunk of data it doesn't matter since your eyes will filter that out.

> an earlier post, if the processing demands are too heavy for the main
> CPU to handle in real time, then some kind of coprocessor, whether in
> the form of a dedicated DSP chip or an SMP architecture with multiple
> CPUs, is pretty much a necessity for real time processing of the
> sampled data.

Agreed. That was my earlier argument when I mentioned that a true DSP card should be used. A sound card is *not* a true DSP, just a simple time-domain analog/digital converter. Perhaps the scheme of doing everything in software will work on a 500MHz Pentium III, but how many SWLs have one of those. Just not practical.

Well when I opened the one on my 3000xlt I encountered the same problem.
I found that Uniden added some glue to the inside of the case holding the
unit together. Just keep tugging and the glue will eventually break
loose.

i'm not schlepping
i'm not reporting...

that's what is needed
seeing as how
he has to go to
NYC to appear.

why so Negative?

people were asking about
him and it seems this is
the most obvious
need ... it was just
a FYI based on prior
postings...a good
lawyer seems to be
what is needed most.

I deducted this from
reading a few WWW sites
with the three or four
letters and other comments
based on this.

Legal Rep seems to be the
most problematical
situation with his
case...if you know
how, you know how to
read between the lines
and see that this is the
main problem.

finding a lawyer in communication
law. anyone know one ?

simple

again, why are you so negative?

bill conduit
etc.

What is a cell repeater? My take is that if you hear a signal between
869 & 894 MHz, you are hearing the signal directly.
If you hear cellular calls between 896 and 915 MHz your receiver has a
sloppy front end, as opposed to a triple conversion.

There was a program called MDT that decoded Police Packet at 4800
baud at 850 - 860 MHz or so, and did it with the Multi-Media API for
the
sound card.

Basically he used a C module to get the speed he needed, and then
programmed everything else in Visual Basic.

Alas, there was a big late-night attack by police in several cities
to confiscate the software. I haven't heard if the process is
on-going,
but until new laws are written, police will confiscate contraband
first
and only say oops if you got enough money to make a Supreme Court
case. That along with Cell-Phone receivers, and CW radar receivers.

I did a search on MDT and most of the sites it was at are now gone.

The only remaining link I found was at Qualcomm and the San Diego
Police are scared to go in there:

http://people.qualcomm.com/ppomes/Crypto/MDT.html

But this is the original MDT message, and not useful for the Sound
Card software you need.

The U.S. is quickly becoming a clone of Communist China. It may be
that we stole the nuclear secrets from China, rather than the other
way
around! We're too stupid to let mere engineers design government
bombs :-)

Cross-posted to: rec.radio.scanner,alt.radio,scanner

Well here we are in the late 90s and our police dept has moved again to
the 800 mhz band.
As of May 99 the Vancouver police dept have switched over to the new
E-Comm radio system which uses GE/Ericsson EDACS on the following
frequencies.
1-866.0875
2-866.1375
3-866.3375
4-866.3875
5-866.5875
6-866.8375
7-866.8875
8-867.0875
9-867.1375
Note: data channel switches from week to week, last data channels were
866.3375 and 866.5875 mhz.
This is just the first phase of the E-Comm system which should have more
frequencies in operation in the near future.
The Vancouver police system is fully digital with no clear voice comms
being heard :-(
I have just seen an officer carrying what looks to be a EDACS LPE-200
radio so its safe to say that the system is fully operational.

3222. Re: Odd digital signal - any ideas?

There are very many digital signals out there and there are very many digital formats also.
With so many formats and so many signals, and so many forms of encryption and so many encryption keys, it is impossible to keep up with what is what and who is sending it unless you have a schedule or can compare the signal to a known signal.
You can sit down and program a proprietary signal format also, thus adding to the unknown signals
out there.

3223. Re: morse code on police channels

Newsgroup: rec.radio.scanner

Source record: 116910

All radio transmitters and radio networks are governed by the FCC, which requires
that a transmitter identify itself during every 'session' of conversation or every period
of time.
In police radio networks, instead of every police radio used in that network identifying
itself, the main
network transmitter (located usualy on top of a big tower at the main police headquarters,
and usualy the most
powerful transmitter) identifies it's call sign to represent the sub group of radio's under
its network, and itself.
The FCC allows either a morse code or a human voice transmission of a call sign/identifier
every specified minutes.
Since call signs are automated by a timer, and since generating beeps for morse code is
easer than generating voice (or playing
back recorded voice), morse code is opted as the choice for station identification at
defined intervals.

Aluminum tubing stronger than stainless steel? Better check that!
Also, unprotected aluminum (or copper) woouldn't last in my
coastal environment. I'm using the new Discone antenna from
Radio Shack. No complaints yet.

To send out the callsign of the transmitter, as required by FCC regs (It must be broadcast at least once every 30 minutes on active channels, at the end of use on lightly used channels) If they use CW, then it must be 20 WPM or less.

I work for a water department and deal with wireless comms.
Most likely what you are hearing is telemetry data from/to
a RTU (Remote Telemetry Unit, slave side) or the CTU
(Central Telemetry Unit, master side). These systems are
used to transmit data like water level, PH, chlorine
residuals, water flow, security, etc. There are several
types of protocols used. Modbus protocol is the most widely
used. Do a search using your favorite search engine on the
word modbus and you will find info on the modbus protocol.

I tried, but it wouldn't work because it's made for the internal models.
That was awhile ago though, maybe they've programmed it for the externals.

3235. Need VHF/UHF Discone Design Help

Newsgroup: rec.radio.scanner
Date: 1999-05-30 00:00:00 UTC
From: nero <nero_b@my-deja.com>
Message-ID: <7iqjdr$7vo$1@nnrp1.deja.com>
Source record: 116992
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner

Greetings,

A friend and I are working together to design a VHF/UHF discone antenna. We are pretty much complete with the hub design and are working on the radials. The conventional wisdom is to use the radial length formulas based on the lowest desired frequency. Example: Designed for low of 100MHZ will have range up to 1000MHZ (100MHz x 10 = 1000MHZ). We have a picture of a Discone made by AOR (DA3000) that claims a coverage of 25MHz to 2GHZ (without a vertical element). This seems a bit hard to believe. They have an interesting design of 8 elements per hub. 4 are cut to one length, 2 more for a longer length, and two more cut even longer.

Our discone will have 12 radials per hub. We were considering using a similar idea and cutting the radials to 3 different lengths. This would allow 4 radials at each length. For example, these lengths may correspond to 2m band, 800mhz trunking, and 70cm band.

My questions:

Will the multiple lengths give better reponse at the desired frequencies?

Will this reduce the response at non resonant frequencies?

Is this a gimmick that will not really improve response at the tuned freqs. and will damage the broadband characteristics of a discone?

Thanks to all for your input. nero

Hi to Larry and FD 347,

I have to thank both of you because you have taught me something about
my ACT T16K. Larry, I must have overpaid because I gave $15.oo for
mine. The owner thought it was broke cause it only got the weather
channel on all 16 channels. I thought it might be fun to play with even
if it was broke. Larry you have taught me that there is a 9 volt battery
in it. I had no clue. Looked at the plate, took it off and sure enough
there it was dead as can be. That explains why everytime I unplug it I
lose all memory. It defaults to the weather channel on all 16 channels
when I plug it back in. I am now confident that when I put a fresh
battery in it it will hold it's memory for a while. Thanks Larry. I
don't have a manual but figured it out. This is how to program it.

1: Press MA on the touchpad. (If it was scanning it will stop and a led
will light red)
2: Press the channel number under the led light that you want to program
(The red led light above the number will light).
3: Now press PR on the touchpad. (The frequency will display in the
window with whatever is already programed there. It will probably be

the weather channel on yours).
4: Enter on the touchpad the frequency that you want to program. If it is out of the frequency range of the radio you will get and e for error on the display. You will have to then press cl for clear and start over.
5: The frequency you entered should now be displayed in the window. You now must do the equivelent of entering the frequency by pressing the channel number (not on the touchpad but under the red led) that you want it in. This should be the same as the one you pressed after you pressed MA when you started.
6: When you do Step #5 you will see no difference anywhere but it did enter it. Now you are done. Just press SC (for scan) and you should start scanning again. Don't forget to set your squelch and volume.

Repeat this 16 times with your favorite frequencies and you will be all set to enjoy your new treasure.

Now for Mr. FD 347: Thank you also. I believe you might have a different scanner, like the 20 channel one because there is no location 20 on mine and there is no enter. I was able to enter a priority channel on channel 1 and channel 16. Now I just can't figure out how to deactivate it. Oh well, another challenge to work out, nevertheless I had no idea that this was available, thank you.

Happy Scanning
Rick

3237. Where to buy SS tubing for discone radials?

Newsgroup: rec.radio.scanner
Date: 1999-05-30 00:00:00 UTC

Greetings,

I am working with a friend to design a VHF/UHF receiving discone. The stainless steel rods we have tested (.093") are too droopy for unsupported use as radials. One of the commercial discones I have uses a .19" stainless steel tubing that seems much more rigid. The only source we have found for similar material is asking $14/6ft rod. Ouch!!! A 50MHZ discone with 12 radials/hubs gets real expensive. Anyone know of a more reasonable source for this kind of tubing?

Thanks for your help. nero

Consider staying with bar stock. Tubing is more rigid...until it is
bent
and then it stays bent.

It's more probable that the CMOS battery in my brain is failing and the radio has only 16 channels.

>I was able to enter a priority
>channel on channel 1 and channel 16. Now I just can't figure out how to
>deactivate it.

The priority channel 16 was for detecting the NOAA weather alert tone. (I don't think they use the same toning standard today as they did 20 years ago.) Channel 1 can be anything. I think to disable the priority scan you have to hit . (decimal point) 1 or 9.

Had a 7100 and really pleased with it. Decided to upgrade to Yupy 9000 which was hopeless, suffered terrible pager breathrough right from 110Mhz to over 170Mhz. Got rid of that and now have an AOR8000. Wish I had kept my 7100 now... reason for upgrading was to get the alpha tagging of channels and dual VFO.

I can't say how, without seeing what you did, but what you did was ground
the discriminator output to ground(if you put a capacitor in line, then
you grounded the output through the capacitor, thus an AC short only-less
likely to cause damage).
Either way, generally groundig a disc out does not "fry" anything-but it
sure does make your scanner work lousy :-)

P.S. closed circut jacks are NOT the right type.

Can't you just answer the guy's question instead of advertising your lack
of knowledge by nitpicking it to pieces?
He obviously meant monochrome as in BLACK & WHITE. Instead you give out with
all this BS about stations broadcasting in only one color ('scuse me, colour)
and ice cream and chromatic density and blah blah blah. Sheesh.
All you're doing is evading the question and making yourself look like a
jackass in the process.

Hello,
I Always use an RCA jack. When you remove a phono jack plug it shorts the two conductors in the jack together . When you short the dicsriminator pin to ground it usually affects the squelch and or scan. If you are dead set on using an 1/8 plug get an extra plug to place in the jack when you aren't using a hardware item on the discriminator output.
I hope this helps,
Bret

Hi everyone!

Does anyone know, how to modify the Albrecht AE-60T Scanner?
It seems to be similar to some kind of UNIDEN-Scanner....see picture!

I would like to be able to change from AM to FM MANUALLY......not possible!
I would like to have a greater Bandwidth (for WX-Pics).................not
possible!
Are there any hidden funtions?
What is the "WX"-Poti on the Board for?

.....many questions, but are there answers?

Regency ACT-T-16K

PROGRAMMING
The switches on the touch panels are located under the number or let-
ters. The switches are operated by applying light pressure with a
fingerdirectly on the number or letters. A slight click will he felt
to indicate that the switch has operated.
When power is first applied, AlL 16 channels are
pre-programmed to 162.55 MHz, the primary frequency of the weather
bureau. Also an"E" will appear on the readout. The E may he removed by
touching CL, or it may he ignored. Touch PR and proceed with
programming. The frequency in any channel may he changed as desired.
Any frequency may he entered into channel 16 memory, however,
the Channel 16 Weather Alert feature will operate ONLY on a Weather
Bureau frequency.
Mobile telephone frequencies may be programmed into any
channel. A tone filter has been built into the receiver to prevent the
scanner from stopping on an inactive channel transmitting only a tone
signal.

PROGRAMMING CHANNEL FREQUENCIES

Touch PR
Touch desired channel number.
Touch CL
Enter the frequency by touching the numbers on the keyboard in the
proper order, be sure to enter the decimal point at the correct place.

Touch channel number.
If an ï¿½Eï¿½ appears on the readout, the frequency is invalid.
Touch CL and re-enter a valid frequency.
Repeat this procedure for each of the remaining channels to be programmed.
When all desired channels are programmed, touch SC. If necessary, adjust the Squelch Control to obtain proper scan action. The channels that are not to he scanned may be turned OFF by touching their channel numbers two times in rapid succession. This is necessay to eliminate stations such as the Weather Bureau which broadcast continuously. The channels may be turned back on by touching their number once. The scanner will immediately go to the selected channel, pause and then resume scanning.

PROGRAMMING CHANNEL 1 PRIORITY
The Priority feature for Channel 1 may be programmed ON or OFF as desired. When the Priority feature has been selected and the scanner is locked on another channel, Channel 1 will be sampled approximately once a second for activity. In this mode of operation, the scanner will switch to Channel 1 whenever a signal is received on Channel 1. With the Priority feature programmed OFF, Channel 1 will be scanned in sequence with the other channels.
The receiver must be in SCan mode or MAnual mode to enter or remove the Priority feature.
The scanner does not have to be on Channel 1 to enter or remove Priority, it maybe scanning or locked on any channel.
Any frequency in any band may be used as a Priority frequency in Channel 1. Make sure the desired frequency has been entered in Channel 1 before Channel 1 Priority is activated.

ENTER CHANNEL 1 ï¿½PRIORITYï¿½
Touch Keyboard number ï¿½1ï¿½
Touch decimal point.

REMOVE CHANNEL 1 ï¿½PRIORITYï¿½
Touch Keyboard number ï¿½1ï¿½.
Touch CL.

CHANNEL 16 ï¿½WEATHER ALERTï¿½
Channel 16 ï¿½Weather Alert" includes a tone circuit which is activated when the Weather Bureau transmits an alert tone to warn of severe weather conditions. Make sure the correct weather frequency for your area is entered in Channel 16.
The receiver must be in MAnual mode for proper ï¿½Weather Alertï¿½ operation. Also, it should be programmed to monitor an inactive channel (a channel with no transmissions).

ENTER CHANNEL 16 ï¿½WEATHER ALERTï¿½
Touch MA
Touch Channel Number of any inactive channel
Touch Keyboard number "2ï¿½
Touch decimal point

REMOVE ChANNEL 16 ï¿½WEATHER ALERTï¿½
Touch Keyboard number "2"
Touch CL.

PROGRAMMING SEARCH FREQUENCIES
Two frequencies are used in the Search mode. The rules for these frequencies are:

Both frequencies MUST be in the same band.
The START frequency MUST he lower than the STOP frequency.

Programming the Search frequencies has no effect on the frequencies that have been programmed into channels 1 and 2 memories for SCan or MAnual functions.

The frequencies that appear on the readout at the beginning of programming the SEARCH featureï¿½s START and STOP frequencies have no meaning. They may be removed by touching CL or simply ignored and the desired frequency written over them.

ENTER SEARCH ï¿½STARTï¿½ FREQUENCY
Touch SP
Touch CL.
Enter START (lower) frequency by touching the Keyboard numbers in the proper order. Be sure to inclttde the decimal point.
Touch Channel number 1
If an "E" appears on the readout, the START frequency is incorrect, or not within a band. Touch CL and reï¿½enter the correct frequency.

ENTER SEARCH ï¿½STOPï¿½ FREQUENCY
Touch Channel number "2"
Touch CL.
Enter STOP (higher) frequency by touching the Keyboard numbers in the proper order. Be sure to enter the decimal point.
Touch Channel number ï¿½2ï¿½.
If an ï¿½Eï¿½ appears on the readout:
The START and STOP frequencies are not in the same band.
The STOP frequency is lower than the START frequency.
Touch SS to start the search. If the readout immediately displays the START frequency and noise is heard, move the Squelch Control to the left just enough to stop the noise and touch SS again.
When an active cllannel is found, the Search will stop and the frequency will he displayed.
Touch SS to resume the search.
The search may he operated manually if desired.
Move the Squelch Control to the right until the Search stops. With the Squelch Control in this position, the Search frequency will move one step each time SS is touched.

3254. morse code on police channels

Newsgroup: rec.radio.scanner

Has anyone heard how many talkgroup memories will be available with the new BC245? As most of us will agree, the 50 (5 banks of 10) with the 235 and 895 is not nearly enough with some of the larger trunked systems. It would be nice to have a MINIMUM of 10 banks of 10.

Your thoughts?

Normally, they are the CWID for the radio system. They are supposed
to id the station with their callsign.

Model: 2995A, AM/FM and 4 channel scanner from 150 to 174 Mhz. An older 70's type where you analog dial in the freq for each channel, click it in for each channel and then listen to the radio or the 4 channels scanning. Good shape and it is portable but not that small. You would take this on a picnic or to a gathering but would not want to tote it around if you were hiking. Will send .jpg's at your request. $30 shipped to your door.

This model covers from 30 Mhz to 512 Mhz, 760 Mhz to 824 Mhz, 849 Mhz to 869 Mhz and 894 Mhz to 1000 Mhz. It has AM, NFM, and WFM modes so you can receive the FM broadcast band and sound for TV channels 2 thru 13. Not a scratch or blemish on it and it works perfectly. Comes with manual, stock rubber ducky and AC to DC power supply. $150 + $5 shipping. USPS money order please.

I think it's going to be the same. I saw it some where but now I can't find it. So don't hold me to it. If I find it again I'll post it. I have it some where in my favorites file.

Have fun scanning!

The best place would be: http://www.javiation.co.uk/ Or you could try Durham in Canada but Javiation is better price even though they are in the UK. Very friendly people, even when you don't buy from them. They responded to my e mails within 2 hours.

Have you tried v1.01 of Goran Vlaskis software, it sounds like you're
talking about 1.00. As far as I can see his software is about as
comprehensive as you could get.

PS I believe 1.01 does not read the correct duplex shift from the radio,
anyone confirm/deny this, I think Goran is looking into it for me ?

Andy.

I DF'd a UHF source that has gone awry after a lightning storm a
few years ago - it was a UHF transceiver on a water tank doing
telemetry service.

It would generate garbage in the UHF amatuer band in warm
weather so it took the first few warm days in spring to find
it finally ...

As to the specific data sent - don't know that ...

Jim

Forget about the Ramsey junk ...

Try instead:

www.northcountryradio.com

For their AM88 and MPX96 AM (mono) and FM *stereo*
transmittters. These are good units - synthesized so no drift ...

Price: about 80 US dollars - but, you get what you pay for ...

Jim

Why is it that you cannot hear the Morse Code I.D.s even if you have all
the talk groups programmed into your scanner. Thanks for the help.

Now THERE'S a good one, , , , , , , ,

A shaver is nothing more than a modified spark gap transmitter
that does other things!

How the heck can you quiet THAT down?

I hope you mean for Chris to port Multimode to Linux and not DOS instead of Windows. Even if I may argue that he may do better porting it to Windows (if that is indeed practical), Linux is at least a current, viable, and very powerful operating system for the PC. DOS hasn't been a current O/S for 4 years now. Why do hams continue to write for it? Then again, there are some still writing programs for the Commodore 64, so I shouldn't be surprised.

Can you be more specific about the "speed issue?" Are you talking
about *latency* (i.e. the amount of time required for a given sample
to wend its way through the various layers of the OS to reach the
user's application)? Or are you talking about the ability of the
multimedia APIs to deliver sampled data to the application at the same
rate as they are being sampled (e.g. the sound card is set to sample
at 44kHz, but samples only arrive at the application code at a lower
rate, like 38kHz)? If neither of these is the case, then how can you
claim that the API is the problem?

I submit that the true bottleneck is not the Windows APIs at all, but
rather the algorithm, the implementation of that algorithm, the
processing speed of the CPU, or some combination of these. As noted in
an earlier post, if the processing demands are too heavy for the main
CPU to handle in real time, then some kind of coprocessor, whether in
the form of a dedicated DSP chip or an SMP architecture with multiple
CPUs, is pretty much a necessity for real time processing of the
sampled data.

My original question was info about the remote protocol, I'm not looking for software. So what all the bits mean that's what I want to know.

I know the software of Goran and I appreciate his efforts to give us his freeware software but I want to do much more and implement IC R2 support in some other software I wrote....

And yep the dup+/dup- is wrong.... But it sends it back ok it's only the presentation in the grid...

I have the same model scanner somewhere in my garage. If memory serves, priority mode is engaged and disengaged by pressing . (decimal point), 1, then enter. (It's been a long time.) The WX priority is similar except you change the 1 to a 9. The NOAA station must be programmed into location 20 for it to work. I doubt however that it will recognize todays alert tones.

The SP and SS buttons are Search Program and Search Start. I'd have to take the radio out of storage and play with it to remember how to fully use it.

I have the exact opposite opinion!
My AR16 picks up the shortwave bands
with no problem... with the suplied antenna.

The UHF & VHF comes in great!! I programmed
all the search ranges and memories using
ScanCat Gold SE for Windows.

I can slip this little thin in my pocket and
scan away...

I admit this isn't the greatest scanner in the
world but it fits a nice niche market for those
who already own a nice table top or large
handheld and just want to slip something in there pocket
when they visit boring aunt phyllis.

the included NiHyd batteries last a couple of days.

for $190 this radio is worth the money.

Jan,

Mind sharing that info ?

There's always the possibility to edit the Vlaski software save files -
I thought about a "sort/delete dupes" program.
(For me, the software works great, thanks to the author :))

I have nothing to "admit" to, I asked you what you are muttering about. You come back with your beatnik-yuppie yammer rather than anything factual or of substance. Your prose is just so far out new old age, Conduit. WOW.

>
> an fyi

I am to admit to your fyi? Is this really MJB? One in the same?

> nothing more....

Yeah right, Bill. Nothing more.

> people willing
> what's the score
>
> reading the sites
> seeing the implications

Utter nonsense. Do we snap our fingers when you are done Bill? Oh your prose is so deep. So deep it reads like nonsense but at least you avoid answering anything.

>
> why this negativity? it's
> your mantra...

Asking what you are mumbling about is negativity? Or is it my mantra? Which one farout-B?
Are you so South Cal you can't answer simple statements without the stupid Maynard T. wannabe impressions?

You talk about Cheek but post no facts.
You ask for help but say its fyi.

What's up?

HY,

no philisophic point of view but have a look at the frequency analyzer at
http://www.relisoft.com/#freebie
They take a sound from mic, perform FFT and display the spectrum on screen
in real time.
Works well on win95/98, source in c++ is available and program (exe) size is
70 K yes 70K !!

If anyone write a soundblaster prg wich can decode navtex
please send it to me.
Thank's
All the best
Stephan

You live in a cave??

The legality of MDT reception in United States is in question and it probably will be up to the courts to decide.

I have yet heard what the charges against Cheek are. Anyone really know?

His WWW site pretty much was a red flag waving in the face of the law. It stated the software to decode certain modes was on the Internet, and easily acquired. Dumb move #1. He did have a disclaimer saying he was not responsible for illegal blah blah blah. Reminiscent of the software pirates that post disclaimers saying their cracked copyrighted software is for educational purposes only. I also have read Bill included the software to decode MDT with the slicer he sold to 5 different people. Dumb moves number 2,3,4,5,6?

www.kmed70.freeserv.co.uk has moved I believe. Do a www.dejanews.com search on MDT and you should get many questions answered.

What does that have to do with having more than one class of license?!
The ONE Ham license would require you know this information, and the
differences between using VHF and HF.

I have the non-PC version and I love it.
Great sensitivity with loud clear audio.
Nice service scan..normal emergency stuff also features FM radio, VHF/UHF TV.
300ch 25-1300(no cell)
Its a bargain at around $250(non-PC).

So you are just adding to rumor and gossip. You are an FYI schlepping for Bill Cheek and you refuse to answer any of my questions or add any pertinent information.

FYI, your cute prose and little i's don't "get me hysterical" or "inflame" my "desire for
perfect order". I have no desire for perfect order and I am not the one acting like a child talking about passing gasses. Seems I have gotten to the prose guy? Child taunts? That characteristic is what turned so many against Bill Cheek and now what? You pretending to be him or just imitate him? Can't you even be original?

Thanks for the report lawyers cost money. Cheek knew that when he sent off the MDT software to the feds too. Most everyone knows that. Did you think the folks on this group were clueless to the cost of legal representation? But thanks for the FYI anyway. What an educator Bill. Summation FYI. You didn't just make that up did you? What the hell does it mean? Do you know what FYI means?

So Mr. FYI Conduit. What are the charges? What's up? What WWW pages? You keep posting Help Bill find a lawyer FYI's but don't give out any info. He doesn't have one? What's up Maynard T? Or you just going to keep posting FYI's with supposition and summation of nothing.

From: Ray Palleschi <arengravers@boston.sisna.com>
Message-ID: <3753417D.364D4ABA@boston.sisna.com>
Source record: 116873

I'm trying to replace the worn-out BNC connector on my BC2500 but I'm having problems removing the case back. I've removed the 4 screws (2 in battery compartment,2 halfway up back of radio) but the case back still won't come off. Am I missing another screw(s) someplace? From the top of the radio, the first 2-3 inches of the case will come loose, but it binds and won't move from the edge of the battery compartment top wall to the bottom (once the top is loose you can't move the bottom). If someone has a tech manual for the BC2500 and could fax or scan and email dissassembly instructions it would be GREATLY appreaciated.
Thanks in advance for any help...

Ray Palleschi

All scanners have an internal batery of some sort. See if you can locate and external access to it and then replace it. I discovered one in the battery compartment of a handheld scanner that the customer was about ready to send in for repair. Saved him about $40. You may have to open the case and see if the battery is hidden on the board, Replace it and go from there. If it's a RS scanner they can get the battery for you. If they say they cant, write me direct with the catalog number of the radio and I will look it up in some the the books I have access to.

yes, all you would need to do is go to the website where the networked Winradios are sending the audio. So, all you need is an internet account and a browser.

I asked him long ago to quit sending me E-mail. The man lost it. I asked YOU
because you crawled up on your soap box in a public forum with your
schlepping that you now claim is FYI but you can' t discuss it. You spew
your FYI but can't back up a single word Conduit.

> why not do that?

Read above. Why not answer rather than schlep?

> I have, but that is

That's right but I want to import data from other software, insert,delete channels, use the clipboard, sort the list,run the memories through some automatic bandplan etc. And again will all respect your software is too simple. It's ok for dumping to a file but I'm looking for more options. But I just received the info about the IC-R2 memory dump setup so tnx to everybody...

: How about you do radio theory and practice 101 - heat and extraeneous
: radiation are by products of radio TX. The microwave oven is just such a
: device that enhanses that which is normally considered a by-product..
: ....

Yes, but you are also bringing in a very hot engine ans exhaust system when you
go to fill up, I would have thought that this would be far more extreme than
what "heat and extraeneous radiation" is emitted from a phone (especially
as we are expected to hold those things up against our head). Why would very
slight radiation heating effects be more dangerous than a hot car??

: Oh and May I suggest that you take particular note of the voltage and
: current streams in an antenna system - This will give you an understanding
: about the way an antenna works and what happens in regard to efficiencies
: and by products!

I am aware that there are various forms of radiation emitted from a phone but
I still cannot see how current could be emitted. There is certainly a fair
amount of power put out but htis would all be in the form of electromagnetic
radiation, not electrical current. Yes there is current flowing in the
antenna, and the resultant waves induce a current in the receiving antenna
but there is no actual current passing between them!

: It makes the people who put them up seem as if thay have
: >no clue.

: They don't but lucky for them that those who made these regulations do! :-)

I am sorry, but I still cannot see the argument that mobile phones increase
the likelyhood of an explosion at a petrol station.

Megahertz is the correct term because you are expressing a frequency in
hertz not cycles. The megacycle is correct when you are talking about how
many cycles in a second.

Your comment is incorrect.

"Hertz" means "cycles per second." Other than that, the only difference
is that Hertz is the newer term and has replaced cycles/second in the
literature. Many oldtimers still use "cycles" as shorthand for "cycles
per second."

> coastal environment. I'm using the new Discone antenna from
> Radio Shack. No complaints yet.

Robert,

I started with the new R/S discone. These have a reputation for the lower radials falling off. I used stainless steel split ring lock washers on the radials and the threads stayed tight. All was well for a year. Then the lower radials started coming loose at the crimp to the threads. In a slight wind you could see them all wobbling. Finally a bird strike took out 3 lower radials. Time to start over.

The our new discone will either be anodized on the aluminum parts or bead blasted and clear epoxy coated for weatherizing.

Thanks to all for the input, nero

Hey Al,

That was great info on the act16. I now feel as if I have full control
of the scanner thanks to your great instruction. Thank you.

Rick

I have read that the Nazis tried to popularise Megacycles or the German equivalent because they didn't want to use a unit named after a Jew, Hertz.

Alot of ham stores/shops carry Aluminum tubing so you can make your own antennas.
I buy 4' solid stainless steel rods from my local Lowes, Home Depot or Payless Cashways.
Just make sure they have not been abused and bent as you want straight rods.

I will be going through that sort of book in the not too distant future but will not have time to in the next few weeks. I was just hoping that someone would be able to fill me in before then. I am not choosing to be ignorant, if I were, would I be asking questions as I have been??

BTW, where do you get those books on incendiaries??? They sound fun!

Actually, It's not. Hertz = "cycles per second" by definition. I have heard
of megacycles referring to such things as the expected lifespan of a switch.
eg "rated for 2 megacycles" means that it is expected to operate reliably
for 2 million on/off switchings. Hertz has been declared the standard SI unit
for frequency, although I don't know what standard the USA has adopted as
theyoften seem a bit behind the times in this area.

I personally have no objection to the term megacycles and everyone knows what
it means, It just seems silly to post something like this at someone who was
using the accepted standard. (Oh yeah, rip that damn caps lock key off!!!!)

THE TRUTH OF THE MATTER IS that Megacycles was used before Megahertz cam
along. Hertz was some german dude that had somethhing to do with radio
waves. You are just acknowleding the guy everytime that yuo say
Megahertz, Hertz, TeraHertz, PicoHertz. From a scientif standpoint
Megacycles is more correct.

Thanks Barry!

Don't happen to know freq for hidden bank
bait money transmitters(RAT units), or transmit freq for Pac-Tel tracking
system
that is similar to Lo-Jack ??

Thanks again, Joel

Well here is an interesting suggestion. Try putting your scanner in
trunk mode with all the frequencies for a digital system programmed into
it. You should see the talk groups even though you will not be able to
hear what they are saying.

3367. Pager decoding on laptop

Newsgroup: rec.radio.scanner
Date: 1999-05-31 00:00:00 UTC
From: mpaull@mpx.com.au
Message-ID: <7itsia$b4q$1@nnrp1.deja.com>
Source record: 116956

Hi,

Is there any reason why pocflex won't run on a laptop? When i run the program it just locks up, solid. The only way to get control of the machine is to reset it.

The laptop is a 386SX-20, Vga, 2Meg memory (615k free in dos) with himem.sys loaded and dos in hi memory, one serial port, one lpt port.

I've run PD204 without any problems, except of course it has a 15 minute time limit on the shareware version :(

If pocflex is a no-go, is there are other dos pager decoding software around? Or even Win311 as the laptop has that installed too.

Any help appreciated.

Thanks

Mike

Ah, another company listening to the cell phone lobby. What a pity.
Both of those scanners, I think, are too darn easy to modify to recieve
those naughty little group of frequencies. That is why the bidding went
the way it did. Plus with the 2006, you can instasll the G-Wiz board,
make it follow Edacs, Motorola, computer-control

The radio shack design is quite noisy in the RF department due to the crimping
of the ground radials to separate metal bullets with screw threads.
This is why I like the single peice tube design better, or better yet, solid radials.
Take the rubber caps off your tubes and they will play a song for you in high winds.
Sweet!

Odd as you say that since solid discones compared to radial discones are only a little more sensitive, making the pain of using solid materials and the construction of a solid discone not
worth it.

It sure would be nice if there was a "Master List" or "Bible" like book that told you all the necessary information proper setup of say a Optocom, for use with the provided frequency and ID info. Much like the Monitor America book is except info as well as procedure. For those that haven't done trunking before, and travel across the country, it is nearly impossible to determine all of this without spending innumerable time doing so.

I cobbed an old lid from a deepwell pot for the top, and used a sheet of aluminum flashing to make the cone. A plastic sewing thread spool cut in half forms the spacer and it works better than the RS Discone that fell apart that I copied the measurements from.

We built another on a 3/4 inch PVC tube using nothing more than aluminum window screen and a hula hoop for the bottom, it's about double the size of the RS Discone and trimmed for 6 meter transmit. We did replace the top screen with an aluminum panel from a discarded screen door bottom a number of years ago, as the screen sagged down.

Hi, there are currently two controversies simmering in different parts of the country regarding public safety's move to closed broadcasting public safety systems. Specifically, these are Lexington County, SC., and Philadelphia, PA.

I maintain a website that watches developments like this closely and am putting the word out for people in these respective areas to sign up to the Calling All Citizens listserv in order to provide us with ground-level accounts of these confrontations as they unfold over time.

The listserv information and other details are all available at the link which appears in my signature.

Thanks.

Dave

Message-ID: <928171597.14507@www.remarq.com>
Source record: 116985

I want to warn everyone about a very real problem with ALL
these message boards.

Often I'll see a post about one of these "illegal" or
questionable topics:
-Cell Equipment/Modifications
-Software or Equipment to monitor Cell/Paging/MDT
transmissions

While posting messages on this board are fine I must warn
EVERYONE about replying via email to one of these posts
asking for information.

I've seen several posts asking where to get MDT or Paging
Service software. The person asking even usually posts the
link to a now defunct website.

There is a very real possibility that some of these
individuals are members of the LAW ENFORCEMENT COMMUNITY
trying to either entrap or gather information for possible
future legal action!!!

Once you reply to someone you don't know regarding one of
these restricted topics there is a risk.

Remember...It's not paranoia when they're really out to get
you. Just ask Bill Cheek.

BULL!!!!

I say, if they tell you to turn it off, tell them to SHOVE OFF!!!

WHAT THEY GUNNA DO? HUH?
Not like there's COPS on the planes!!!!!!
If they doesn't like it, SCREW EM"

(jus' jokin' guy's, liten up)

Actually. reading Phil's original post, and the logic employed (it worked on my flight, good landing and take off, MUST be OK) reminded me of the old NW Airlines problem with the flight crew that blew a BAC WAY off the charts AFTER the landing. (and they did all the drinking pre-flight)

At their hearing (where they we sentenced to something like 50 lifetimes in butthole hell) the only defense offered was "take off was OK, flight went OK, landing was OK, we must not have been THAT BAD!

he he he

Yeah, and add a styrofoam head, and gossamer wings, and it can be
disguised as an angel.

I have aluminum up all over the place. It gets a little dull and some
aluminum oxide, but lasts for years. Copper gets copper oxide on it,
but won't rot away unless you use fasteners other than copper or
stainless.

If I see you on a plane with a scanner, I will jump on you, rip your batteries out and throw
them in the plane's toilet.
If you have something to say about you possibly risking my life by screwing with
the plane's electronics, I will tell you to SHOVE OFF and the proceed to beat the shit out of you while shoving your scanner up your ass.

3405. For Trade or Sale Pro 2032 Base Scanner

Newsgroup: rec.radio.scanner
Date: 1999-06-01 00:00:00 UTC
From: "D. Schopp" <dschopp@sprintmail.com>
Message-ID: <7j23q5cub1@holly.prod.itd.earthlink.net>
Source record: 116694
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

I have a Pro 2032 base scanner for trade or sale. Cell and speed mod have been done.

The Pro 2032 covers:
VHF-Lo.....30-50 MHz (in 5 kHz steps)
Ham.....50-54 MHz (in 5 kHz steps)
VHF Aircraft.....108-136.975 MHz (in 25 kHz steps)
Government.....137-144 MHz (in 5 kHz steps)
Ham.....144-148 MHz (in 5 kHz steps)
VHF-Hi.....148-174 MHz (in 5 kHz steps)
Ham/Government.....380-450 MHz (in 12.5 kHz steps)
UHF-Lo.....450-470 MHz (in 12.5 kHz steps)
UHF-TV.....470-512 MHz (in 12.5 kHz steps)
UHF Hi.....806-823.9375 MHz (in 12.5 kHz steps)
UHF- Hi.....851-868.9375 MHz (in 12.5 kHz steps)
.....896-960 MHz (in 12.5 kHz steps)

Channels of Operation.....Any 200 Channels
.....in Any Band Combinations.
.....(20 Channels per bank, and 10 banks)
.....and 10 monitor channels.

The Pro 2032 looks just like the Pro 2006. The radio is in excellent shape, comes with antenna, no manual, AC power cord built into the radio. Can be computer controlled like the 2006, jack already installed.
Would like to trade for Bearcat 890XLT or similar base scanner with milair coverage.

Will sell for $175. Price includes shipping.

Thanks,

D. Schopp

HI Y'all,
I was just wondering if anyone has any recent frequencies that might be used at the Hamilton International Airshow in Ontario Canada, as well as the Thunder Over Niagara in Niagara Falls New York, Rochester Airshow(the Blues'll be there), and the Toronto International Airshow. I'm doin a roadtrip in a few weeks up in the Southern Ontario region and'll be spending the rest of the summer there. Just hoping someone might be able to pass along some frequencies for the above airshows which I'll be attending. Thanx for all your help! It's all much appreciated!!
Happy Scanning!!
Mike

Source record: 116699

Are you sure its just a cordless phone pack. When I tore into my fathers 3000XLT battery pack it seemed like the cells totalled 6 volts and all the cordless phone cells I found at Radio Shack were 3.5 volt packs.

If you can dig up those Sanyo part numbers I would surely appreciate it because I had to pay for a completely new pack when all it needs is some new cells. I can handle the soldering.

Oh boy here comes the paranoid right wing ramblings. Were you wearing your
Army of Isreal when you wrote this rehtoric? Have you always had an anger
control problem? Have you ever disagreed or debated soemone without childish
insults and profanity? I haven't seen it on this NG but thought maybe you
had a WWW site for reference.

> in bill's case: well, he was too egotistical.

That's what I said...that's what always has gotten Bill in jams.

Charlie....

go to www.geol.com/vx5/

The latest version is eve170.zip. Be sure to also download a file there
called ver050.zip and unzip both files into the same directory.
EVE will not work with the ICOM, just the Yaesu FT50, VX1 and VX5.
Nice piece of software, and will unlock the VX-5 for extended transmit
without any physical modifications on the radio.

forgot to mention in my previous post that there is a good mailing list for the VX-5 and EVE at www.onelist.com

Just do a search for VX5 once you're there, and you can subscribe to either list. Lotsa good info by some knowledgeable folks there, including the author of EVE.

Actually it does come close. Don't confuse 'to Schleppe along with" which would mean the last in a group walking with schlepping which is usually interpeted as pulling something overweight or too large.

>Yiddish impaired?

Yes, I am a shygetz afterall. What do you expect?

> You need to learn what 'schlepping' means. Any clue?

Read above. Why, what is your interpretation? I expect a lesson with a Yiddish name like McCready. :-)

You'd be amazed how much of that kind of thing is out there. And yes, it is telemetry. You are probably hearing a wide area Supervisory Control And Data Aquisition (SCADA) system. Many of these systems use protocols such as ModbusRTU. I should know, because I design such systems for a large utility.

The problem is this: Speeds and modulation have not been standardized in any way. For example, we use Bell 202 modems on 928/952 MHz radio systems, and a proprietary protocol known as QUICS IV. (This combination sucks in every way except one: it's so unusual that nobody is likely to intercept it).

The biggest problem with monitoring SCADA traffic, though, is that even when you have the protocol, modulation, and frequencies figured out, all you're going to get is something like RTU #33, analog input #7 changed to 1428, digital input #2 is on.

There is usually no intelligence telling you what each switch or analog reading is, what its scale or sense is, or other such things. If you enquire with your local water department about the point list (a list of each data source at each remote site) you'll discover this is often considered to be a security issue. They are not likely to distribute a point list for fear that you might build a transmitter and command things to operate.

Interception of SCADA signals is an interesting idea, though. If you were diligent, you probably could do it with a bit of effort. Bear in mind, however, if you were to release any of that information (remember radio secrecy!), chances are someone might get scared. Water companies usually have legal staff; and at least in our case, they have been known to get bored from time to time. I'd be very wary of a water company when they unleash the lawyers.

Further, ever since Oklahoma City, more and more federal money has been spent on reducing vulnerabilities of cities to terrorism. Water

utilities are no exception. I've even been surveyed on our security procedures to defend against HERF (look it up).

So if you do manage to decode this stuff, keep your mouth shut. The hobby doesn't need this kind of publicity. And to be honest, I would like to keep things simple at work. The last thing I need is yet another moronic security "expert" from some three letter agency scrutinizing me, my family, and my work.

Made by AOR. Here is a general description of this
receiver scans freq. from 0 Mhz to 2.03 Ghz.
It's all mode, search, free scan, clock, date,
alarm, sleep, and much more. And I have Proof that
it went to AOR to get a check up to replaced
lithium battery and to make sure that it on
frequency. The date of invoice is 3/5/99 with invoice number.
And this is there i ship it to:

AOR U.S.A.
20655 S. Western Ave. Suite # 112
Torrance CA 90501
Tel. 310-787-8615
(This info is for people who needs AOR address)

Good working CONDITION.

1) I have manual for it,
2) Mobil plug & Extra cord.
3) I am also including a RADIO SHACK 12 volt power supply.

All for $725.00
That Includes S & H And Insures 2 day air.
Will e-mail you and call you with
tracking number.
I'll ship anywhere in the USA ONLY.

Accept Prepaid (Postal) Money Order

If send a bank check you MUST wait 10 days
to clear!..

If you like you can e-mail me with your
telephone number and I'll gladly answer
any questions you have.

>"Beware of the massive impossible!"

Well... I'd look at it from the point that the individual as a HAM was
already involved in a problem with this individual. He now had what
'appeared' to be evidnece of a criminal act on this individuals part.
In that regard, I see nothing wrong with bringing information he already
had and his suspicions (and that's ALL they were at that time) to
the attention of the local police.

As to the secrecy issue, I don't believe that applies at all. There was
no personal gain here, other than to help with his enjoyment of the
scanning hobby. And in fact I don't believe any of the public service
frequencies could be held up for secrecy anymore. First, not with the
widespread availability of scanners and their acceptance into the
community. And secondly (actually to support the first) a NUMBER of
communities BROADCAST on their fire and police frequencies
in such a way that the public DOES understand what is going on,
and there is a PERCEPTION by the public service agencies that
this is the norm. Specifically, a lot of departments will announce
school closings or other items of a community interest.

Glenn wrote in message
>CEO, Author, President...how did that go?
>

Just fine probably when you consider the scale of things. I am the CEO of my own software company. Doesn't mean I'm rich though - still working a day job to pay the bills. The software company does occasionally supply some extra $$ but not enough to pay for a high priced attorney should the need arise - probably the case with Bill too.

>He now gots the minions schlepping a lawyers second hand on the net?
No, he simply doesn't know of any and wanted to know if we did.
>
>What ARE the charges?
This too is unclear, but as far as I can tell some judge in NYC thought decoding MDT was illegal. Knipschild posted MDT data on the web which violates the Communications Act of 1934, and I think the courts are trying to figure out if Bill should be charged as an accessory to that crime. As a result, Bill needs to appear in court to answer questions, and to do so without a lawyer is damn near suicide.

>
>Thought he owned a communications company. CEO? President? Where are those
>connections?

As I said above, all owning a company means is that you wandered into the coproration commission and filed for a license. It doesn't automatically make you rich.
>
>He needs Conduit to schleep Lawyers on the Net?
No, Mr. Conduit is doing so on his own, which I think is great. That's a true friend, in my opinion....
>
>What's the REAL story here?

That IS the real story. Cheeks letters are available for viewing on www.strongsignals.net and should provide some further insight.

Maybe so, but this is more than a parking ticket or speeding citation. This
is serious crime, serious time kind of stuff and without a good attorney
they may be tricked into answering something that will incriminate them. A
public defender won't do because they haven't got a clue what MDT stands
for, let alone what a data slicer is or anything else. A good attorney
specializing in communications law however, would be able to make short work
of the government's so called "expert" (read: clueless) witnesses and get
Bill on the next plane back home scot-free.

[last changed 01-Apr-99]

The latest version of this file can be accessed via my web page at:
http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-federal-government license in the United States (over three million records). Many of the sources listed contain a subset of this data, although some contain all or nearly all of it. Federal government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscription services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

Another listing of FCC databases has been compiled by Rich Wells at:
http://www.strongsignals.net/htm/fccfrqdb.htm

----- WEB-SEARCHABLE DATABASES -----

You can search the FCC master for free from these web sites:

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

http://www.perconcorp.com/db_srch.htm

----- DOWNLOADABLE DATABASES -----

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. However, it is not being updated frequently.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See: http://www.wvsc.wvnet.edu/~fcc/index.html

----- PURCHASABLE DATA -----

BETTY BEARCAT

The Bearcat Radio Club sells FCC data in several forms. The Betty Bearcat series of regional directories covers US public service frequencies in 8 volumes. Also available is the Betty Bearcat CD-ROM that contains public service data for the entire US and a DOS-based database search program.

Betty Bearcat directories are $17 each, and the CD-ROM is $27. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), or http://www.bearcat1.com/scanners.htm.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the US Census Bureau at http://www.census.gov/cgi-bin/gazetteer/. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase used to cost $34 but is now being sold for $4 a copy while supplies last! CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MR. SCANNER

Mr. Scanner offers custom printouts of public service frequencies by county, or the entire FCC master for a city or town. Also available is public service data on floppy disk and a CD-ROM of all FCC data for the entire US. The floppy disks and CD-ROM come with a database search program.

County printouts are $4 each, and city printouts are $6 each. Floppies are $25 for the first state, and $10 for each additional state. The CD-ROM is $37. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), http://www.bearcat1.com/mrscan.htm (printouts), or http://www.bearcat1.com/menu09.htm (disks).

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

PRO DATA

Pro Data is a database manager program for license data. It does not come with its own data but can import data from APF, Percon, ScanWare, and UFDBF database files.

Pro Data costs $60. For more information, write to prodata1@gte.net, or visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543; call him at 630-554-3839 between 6-10 PM | central time; or visit http://www.megsinet.com/~parnass.

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

Try Scanner World in Albany, NY

Last time I bought one there it was in the $35-40 range

cute. here we have this
guy who does not miss a
post by certain people
and so far there have
been about 8 postings
dealing with the WWW
sites this info gleaned
from and he says he
"does not know?" or
"does not know!"

cute.
r
>
>Facts? Like what you said? I quote "Seems what Bill needs now and
forever
>this thing is a GOOD LAWYER."
>
based on what i read on the WWW page
times a few, yes. My conclusion. I
went out and made a conclusion and then
surmised that this is where help maybe
needed the most: a lawyer in that area
of law.

did you miss something? others got the
idea. so where were you when your lights
went out on purpose?

and then " anyone know one to help bill?" later you type "any
>suggestions...e-mail to bill." That is schlepping Bill.

No it is just a suggestion to find the
lawyers who do this and send
those names to him.

Based on what I read on those
WWW sites pages....why post them
to NG when they can go to the
person who can utilize their
names directly. he don't read this
NG. That's why.

I drew a conclusion based on facts at
my disposal and came up with the above
after reading the WWW postings about
his situation.

You are trying to do what only you can
assume you are "smart" to want to do. No,
it's dumb to dumber a do. really dumb. The
answer was posted and WWW sites were given
and history was made. You just missed out.

And I am not going to be your servant
and do your work for you. There are ways.

if you cannot, then in time someone
will refer to them again...so pay
attention and maybe you will win
the prize when and if you are eligible.

>
>I have never seen the six or seven people Bill. I have never seen you.

Oh you are going way out of tune with reality here.
What a figment of your brain-stem to make a stupid
statement like this. Taking things and bringing
it to mirror what you want seen as.

six or seven people posted the www site referrents
and I even answered to it.

I
>have probably only seen 45 people tops that I have read on the net.
>
` Is not this oaf special. You really go off the
deep end of your mind-lessness, don't
you. where are you at when you made
this statement: in the toilet standing
up with answer in hand or what?

Just dumbfounds peole who can think right.

you are original in this mantra of yours

That's what I thought Phil but mainly all I hear is the paranoia and
anti-gov rhetoric.

>As a
> result, Bill needs to appear in court to answer questions, and to do so

I just thought after the remarks Cheek made as to how important and
sucessful he was his resources and connections would be a bit deeper than
rec.radio.scanner. This certainly would be a humbling experience for anyone
but it really has to be trumatic to Cheek.

> >He needs Conduit to schleep Lawyers on the Net?
> No, Mr. Conduit is doing so on his own, which I think is great. That's a

Actually Mr. Conduit said he wasn't at all but you are correct and I never
doubted that friendship for a minute.

> >What's the REAL story here?
>
> That IS the real story. Cheeks letters are available for viewing on
> www.strongsignals.net and should provide some further insight.

Thanks Phil, I found three Cheek letters there. Your answer to the charges was what I was looking for and your summation is the same as his letters seem to imply. I felt when this began that Knipschild rolled on Cheek. What do you know about Cheek sending the MDT software to the undercover folks? That certainly could hurt.

Thanks for info Phil.

Glenn

3440. Problem with Trunked Systems

Newsgroup: rec.radio.scanner
Date: 1999-06-01 00:00:00 UTC
From: David Fallin <fallin@gate.net>
Message-ID: <37544223.7CCC62E@gate.net>
Source record: 116760

Greetings,

Over the last weekend I was up in the Daytona Beach area. I looked through the Radio Shack "Blue Book" and found listings for Public Service freqs in Volusia County. The book indicated that a number of them were trunked ("T") freqs so I programmed them into my Pro-90 as I have with a number of other trunked systems. I even found 2 of them that were obviously digital data so I assumed that I had the correct setup. However, the radio continued to search all of the programmed channels without ever tracking or displaying IDs (as if it could not find the control channel).

Could it be that this system is not a Motorola system? I know it is not digital because if I leave trunk mode and just scan the bank conventionally, I hear conversations. Maybe the system is a type I system and I do not have the fleet/subfleet info.

I have had the same problem with the public service system in Boca Raton, FL. Both of these are listed as Trunked in the "Police Call" book but not on the TrunkTracker web site.

I have heard that the Radio Shack / Uniden radios work with Motorola type I and II systems only. Others like the Ericson and Nextel systems cannot be tracked.

Does anyone out there have any experience with either Boca or Volusia county?

Thank you in advance.

David

I have a .wav recording of police computer to/from cruiser to station that I'm trying to learn how to decode, I've heard the officers refer to the system as the "packet cluster", does anyone recognize this? I'm sure its not MDT. What program to decode it? Baud? Anything or sugestions? I'd be happy to send it to anyone interested in hearing it.

>That's what I thought Phil but mainly all I hear is the paranoia and
>anti-gov rhetoric.

Well, it's not without some merit... the point is if Cheek gets convicted simply by supplying hardware then that sets a dangerous precedent. It says that the government can selectively prosecute small businesses whos' products are used in a crime, even though the seller had no knowledge of the buyers intent. So what happens when Joe Stupid decides to rob a bank while listening to his scanner he just bought at Radio Shack? Does this make Radio Shack an accessory to that crime? Or perhaps the people who write Police Call because they supplied the frequencies? It is downright rotten and unfair. Dozens of companies sell various flavors of the same circuit, yet only Bill was singled out. This is what has raised the red flags.

>
>>As a

>but it really has to be trumatic to Cheek.

The bottom line is that he was totally blindsided by this, as were all of us. How do you prepare for something you can't see coming? Like I said, I own a company that I consider to be successful, not because of the bottom line, but because of its' potential. However, I would be up the creek if I needed to hire a specialised attorney for any reason. It just wouldn't happen.

Bill doesn't see it as "schleping". He sees it as helping his friend in a time of need, I suspect. It's all a matter of interpretation which seems to be the focus, unfortunately. It's the actions, not the words, that make the man.
>

>That certainly could hurt.

I'm not sure if he did or didn't, but the warrant said he did. You have to understand though, that these charges and this warrant were written by someone who knows less about scanners than a pig knows about pattycake. This means that a disk containing download links to the sites where such software is available might have been construed by these morons to be "included software". I suspect this is more likely the case.

Volusia uses Ericsson. There are 2 trunked systems - one is 13
channels the other is 14 channels, per an Ericson press release. Your
Pro 90 cannot decode the Ericsson EDACS system.

I'm not sure about Boca

Just pop open the case and replace the batteries inside. If you can
solder two wires, your home. All it is is a cordless phone pack made by
Sanyo(the exact number escapes me). I've replaced mine once before and
it was a snap. Got the same battery configuration at a Rat Shack for $9.
GI Joes also sells the same one.

Ahhhh... Methinks you have an UBC-890xlt - the european version! If so then
you should have full cell capability already. Try this. Set the search
limits to 869 and 894 and press search. If the unit doesn't display an error
along the way then you undoubtedly have a UBC-890 clone. Not too bad... ;-)

I would say simply his attitude. Did opto post on their WWW about the MDT ability of their slicer? The others companies? I am not saying they are right to go after Bill, we don't have the facts but Bill certainly has not helped himself. With the Cell Lobby, Gingrichgate and the rest of the Feds attitude toward scanning Bill was quite foolish marketing the slicer the way he did. That marketing generated some sales he could have done without.

The idea is neat, but the scanner just won't do it. The frequencies that
radar guns use is way, way above the upper limit of your scanners receive
range.

If you live in a state where the highway patrol uses mobile extenders, then
that would be the next best thing. Interesting idea though, I'm surprised
that no one has marketed such a beast.

3461. FCC Master Frequency Databases on CD

Newsgroup: rec.radio.scanner
Date: 1999-06-01 00:00:00 UTC
From: Eric Force <eforce@bellatlantic.net>
Message-ID: <375467F7.A4F37E9A@bellatlantic.net>
Source record: 116781
Cross-posted to: alt.radio.pirate,alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

Howdy,

I'm seeking individuals who would be interested in sharing the cost
of obtaining the following WTB (Wireless Telecommunications Bureau)
CD's from NTIS:

Master Frequency Database (All Master Frequency Data Bases-Except
Land Mobile from WTB) (on CD-ROM, Raw Data Only) ($500):

http://www.ntis.gov/fcpc/cpn7621.htm

Master Frequency Database, Land Mobile from WTB (Raw Data File) ($900)
(2 CDs)

http://www.ntis.gov/fcpc/cpn7620.htm

In exchange, I would make a copy of all CD's obtained for everyone
involved for only the cost of the Media (about $1.00 per CD) and the
shipping ($3.00 for Priority Mail [to US addresses only]).

If we could get 100 people interested, the cost should be about $20
for each party for the 3 CDs plus shipping. My integrity can be
evaluated at:

http://cgi2.ebay.com/aw-cgi/eBayISAPI.dll?ViewFeedback&userid=eforce@bellatlantic.net

These CDs contain RAW Data only but I will be writing a DOS based search &
retrieval application which I will share (for free) to all who participate.

If interested, please email Eric Force at:

Eric Force <eforce@bellatlantic.net>

3463. Question RE: Airphones

Newsgroup: rec.radio.scanner
Date: 1999-06-01 00:00:00 UTC
From: joepwalker@webtv.net
Message-ID: <22274-37545F81-69@newsd-162.iap.bryant.webtv.net>
Source record: 116783

I had a couple of questions regarding the airphones in the 400 and 800 mhz area:

(1) Paperwork I've read stated that the 400 mhz assignments are for private aircraft. Does that mean ALL private aircraft? In other words, does Joe Blow in a single engine cessna utilize the same 400 mhz freqs as say Donald Trump in his $$$ aircraft? I know that cell phones are not permitted on-board a commercial aircraft - is the same true for private aircraft? I have heard of a company I believe called AirCell who has been approved for a cell phone especially designed for use in an aircraft.

(2) Are the 800 mhz ground stations for commercial phone traffic (ie: GTE Airfone) duplex or simplex on their signal retransmission? Also, on 800 mhz, is there still the annoying carrier that the 400 mhz is supposed to carry?

Appreciate any info.

>> > system that is similar to Lo-Jack ??
>>
>> Watch this guy be a heroin junky or a bank robber :)
>makes you wonder, huh?

Most bank robbers will steal a car and then use it to commit the crime. Hence the desire for Lojack freq's. Banks are starting to shy away from dye packs because they permanently damage the money, while the bag beepers allow the money to be recovered in tact and prove to be more effective in finding the robber(s). I know this from listening to countless robberies occur in the Phoenix area.

Most of these clowns get caught a few minutes after the crime. One was caught a few blocks away from the scene where the bag beeper led the police to a local strip club, where the robber was happily stuffing $100 bills in the g-strings of the amazed dancers.

However one guy almost got away during a robbery that I heard... The guy robbed a bank and quite literally vanished. The cops followed the bag beeper up to the truck of an an old man who was unfortunate enough to have been at the same red light as the robber, who tossed the device into the back of his truck. The cops were ready to color this one gone when they finally received an anonymous tip from none other than the guy's girlfriend, who was scared and didn't want to run anymore. This was HOURS after the crime occurred.

In the guys vehicle was the money, the weapon, a couple of very popular frequency guides and (count 'em) 4 scanners. Did this guy have the bag beeper frequency programmed in? I'd bet that he did. Scary.

So no, even though I know where you can obtain the bag beeper freq's and the lojack freq's, you won't get them from me. I think that anyone who offers or asks for such things in a public forum like this is an absolute fool. There's only one reason why someone would want to monitor these channels in my opinion. Maybe I'm wrong, but nonetheless...

All I can say is do a little research. Seek and ye shall find. That way, if your intent is to commit felonies with your scanner, you can't say I showed you how.

You cannot pick up radar on a scanner, basically because radar is light.

If you want sonething that really screams, try using FPGA. Xilinx
has an app note using a 4000 series part to implement a 16 tap FIR
that runs at 81 megasamples/second. That's equivalent to 1875 MIPS.
Woo boy! Analog Devices and Burr Brown have new A/D chips which
can handle those rates (12 bit resolution). There's an article in the
current issue of Circuit Cellar using AD and Xilinx parts to implement
a fully digital receiver for HF.

Message-ID: <QVI43.810$%a4.970@news.flash.net>
Source record: 116791

Here are some of the Dallas area SKYWARN frequencies. Most of the storm spotters use the 1st one.

146.88 DALLAS COUNTY
146.66 CITY OF GARLAND
145.21 ADDISON AREA
145.31 CITY OF MESQUITE
146.72 CITY OF IRVING

If you want more go to http://www.w5fc.org and click on SKYWARN/RACES and they have more storm spotter freq's.

I fail to see how knowing Morse Code will help you learn how to operate
a radio. I do not know Morse Code and can operate a C.B. Radio, FRS
Radio, Shortwave Radio, Scanner Radio...

Why should we have to learn Morse code and Electronic Theory? Is it
becasue all the old timers had to? That is about the only reason.

Is it really neccessary to add new frequencies everytime a new users is
added to a trunked system. With a controller and talkgroups; you would
figure that it would not be neccessary.

3493. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1999-06-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7ivt59$qkm@news.Hawaii.Edu>
Source record: 116813
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

This model covers from 30 Mhz to 512 Mhz, 760 Mhz to 824 Mhz, 849 Mhz to 869 Mhz and 894 Mhz to 1000 Mhz. It has AM, NFM, and WFM modes so you can receive the FM broadcast band and sound for TV channels 2 thru 13. Not a scratch or blemish on it and it works perfectly. Comes with manual, stock rubber ducky and AC to DC power supply. $150 + $5 shipping. USPS money order please.
Contact : BHL

Model: 2995A, AM/FM and 4 channel scanner from 150 to 174 Mhz. An older 70's type where you analog dial in the freq for each channel, click it in for each channel and then listen to the radio or the 4 channels scanning. Good shape and it is portable but not that small. You would take this on a picnic or to a gathering but would not want to tote it around if you were hiking. Will send .jpg's at your request. $30 shipped to your door.
Contact: BHL, philoxeny@hotmail.com

From: dcisive@earthlink.net
Message-ID: <MPG.11bd90e1aa6030939897cf@news.earthlink.net>
Source record: 116828

I hate to break it to you but when the Crown Victoria's and Caprice's of the world are long gone and crunched up in a junk yard somewhere, the Volvo will still be on the road, running well with spewing less pollutants then the others ever did. Get over your hatred of foreign cars as the American one's still have a ways to go yet before they are what one would call "well made" and without defects. Just look at the regular recalls Ford, GM and Chrysler have each year. Some annoying, and some serious. Besides, a stock volvo will do 140mph without the exotic enhancements necessary to get a boulevard cruising, gas guzzler up to that speed.

Hello!

Wanted: Motorola MITREK PL element: 127.3 Hz.

I believe that this is a ceramic substrate single inline package (SIP) that plugs into a PL board. I have 141.3 elements to trade if you need one.

Thanks very much for your help!

>for 4 days.

The fact that he is an OO is irrelevant. He wasn't monitoring a ham
radio frequency. He was listening to a scanner. So I referred to him
as a scanner enthusiast.

Frankly, unless there were some kind of signal identification analysis
(for example, a PLL lockup signature or a DF fix), I'd have shut up
and done nothing.

>The article also refered to the 'scanner buff' as a 'volunteer ham
>radio monitor'. This to me implys he may have been an 'OO'.
>While I don't think the OO program is very well run, and the
>OO's I've had personal contact with are pretty much duds,

They sure do and that's all the more reason why I think he should have
shut his mouth. Don't forget the principles of Radio Secrecy.

> the softwarethat comes with it? Any input before my purchase would be
> appreciated.
>
> It is an excellent buy when you consider what you are getting. You get a scanner that works great by its self plus computer control and programing plus percons fequency data base. I did have a couple of problems getting the PC interface up and running though. 1st problem was that serial connector supplied by Sony did not match serial connector on my PC. No problem, went to Radio Shack and bought an adapter, problem solved. 2nd problem was that the software couldn't find the serial port that the radio was pluged in to. This one was more frustrating but I ended up going in to my computers BIOS system and finding that the comport was disabled. An easy fix at that point just enabled the comport and now every thing works great!

Software? I have seen several postings from people bitching about the software that comes with the SC1-PC and I figure they are probably a lot more adept at computers and scanning than I am and maybe expect more. For me it works wonderfully and does almost every thing that it is supposed to do. I am very happy with it.

The only thing you might want to consider is that operating the scanner on its own is a little strange especialy if your used to the Uniden or Radio Shack models, but you can get used to it pretty quickly. Hope this helps with your decision. Have fun.....

gee...thee can copy...but
can you think?
a memorex kind of guy dis
glenn-a-holic.

what a guy....

That characteristic is what turned so many against
>Bill Cheek and now what?

say, I welcome those who turned against
him. so what? You have to have a
brain to get it on with Bill...seems
you did not. Well, that mystery solved.

You pretending to be him or just imitate him? Can't
>you even be original?
>

did you ever think that maybe bill took
lessons from me? No, of course not.

I've got e-mail from him that would see
you chagrined into eternity of loss based
on what concepts I brought to him as he
laughed his ass off.

you have to have a brain to get along
with him. it has to be functioning.

sorry you missed the train...
the reality now is you lost the brain.

choo choo choo....

>Thanks for the report lawyers cost money. Cheek knew that when he sent
off
>the MDT software to the feds too. Most everyone knows that. Did you
think
>the folks on this group were clueless to the cost of legal
representation?

NO. I don't think 10 percent of the
lurkers know how expensive a specialized
lawyer is. They have no idea of what is
happening by the FEDS....why do you think
people are asking for information as to
this bull-shit charge...?

they are clueless too. No one is explaining to
them the under-cutting motives which lie some
place between here and China.

>But thanks for the FYI anyway. What an educator Bill. Summation FYI.

WEll, you are welcome. Thank you for
assenting. Thanks, I do teach. good
too. Yes, a summation FYI...it's what
I do. It's a DNA thing. It's my calling.

Yes, original. You see, I can even spell right.

You
>didn't just make that up did you?

what was that un-teachable one? did I make
you up? No, I'm good, but not that redundant.

What the hell does it mean? Do you know
>what FYI means?
>
Find Your Imagination.

you are lost without one...it just
whooooooooooooooooooooosssshes on by you....done

>So Mr. FYI Conduit. What are the charges? What's up?

I would think that this would be your chance
at creation...you know, coming alive.

What WWW pages?

Ok class, help the GLENN-boy
out here...i did not book-mark
it. Plenty mentioned the sites
to sight by.

You
>keep posting Help Bill find a lawyer FYI's but don't give out any
info. He
>doesn't have one?

No. I said his biggest problem will
be finding a lawyer in communications
law and does anyone know of one in this
thinly practiced part of law. right.

3527. Re: Is Sony's SC1-PC a good buy?

Newsgroup: rec.radio.scanner
Date: 1999-06-01 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <YIH43.870$GT.936@news.rdc1.mi.home.com>
Source record: 116887

The Sony SC1-PC did not have the mechanical quality feel I expected from Sony. The control knobs almost had a worn-out feel to them... very loose. It's a little bulky, compared to most scanners today. The software is very limited, buy considering it's included in the deal, I guess it's acceptable. It performs well.

Contrary to one post, I thought the segment was ok. Other than the guy acting like a goof, it didn't put us scanner users in general in a particularly bad light.

If the guy threatened and terrorized his neighbors he deserved the law coming down on him hard...probably harder than they did if all the allegations were true. I didn't catch whether they even charged him with any ECPA or similar state violations, did they? The charges shown on the screen were mostly standard criminal offenses.

Likewise, it properly alerted cordless phone users to either get a secure phone, or refrain from broadcasting personal information to the neighborhood...they could/should have issued the same warning to cellphone users.

I've been into monitoring for 30+ years and KNOW the kind of stuff that people put out on the monitorable (?) airwaves.

I didn't see anything wrong with the show.

Flame away if ya like...

Can any one explain to me what it is ,and if it's worth to download it
Here is small description of the program.

The search for EXTRATERRESTRIAL INTELLIGENCE

SETI@home actually consists of two parts: an "application"
and a "screensaver". The application does all the work: it
downloads blocks of data from through the Internet, performs
the number crunching on that data (looking for orderly
patterns that might be artificial), returns the results, and
gets another block of data. The application is represented
by a green radio telescope icon in the System Tray (normally
at the lower right of your screen). You can open the appli-
cation window by double-clicking on this icon.

Hello,
I'm from Indonesia
I have an ICOM IC-R 100 for sale
Excellent condition (95%)
Dimensions: 5.9 (W), 2.0 (H), 7.1 (D), 3.1 lb
100 kHz - 1856 MHz (Full Unblocked)
AM, FM, WFM
Mobile
100 Memories
20 Scan Edge Memories
RF Attenuator (20 dB)
Preamp (15 dB)
24 Hour Clock
AFC
Auto Noise Limiter
Keyboard Entry

Box, manual, car mounting, dc cord and cigarette lighter cord included
Sorry, antenna not included (I've lost the original whip antenna and wire antenna)

Cash or trade with ICOM IC-735 + Ext.Tuner or YAESE FT 757 GX II with Ext.Tuner
Please send your quotation to hongky@altavista.net

Thanks

I just modded my BC235XLT to have a discriminator output, and I am having problems trying to find out if I did it right. My question is.

If I plug a set of headphones into the discriminator tap, am I supposed to hear any audio at all? (I don't hear anything)

Thanks for the help

>Thanks for the help

Yes. You should also hear static when there's no comm's being received, as if the squelch was left wide open. If you don't hear that, you didn't do it right.

I know where to tap it on an 895 but the 235 is a mystery to me....

Also, if your using a standard headphone jack for your discriminator out, you should switch to an RCA jack. The headphone jack will short the discriminator to ground which *might* hose up the radio, if left on long enough. Certainly can't be helping to prolong its' life any..

OK, they do use PL codes but not so that they can't be monitored. They use them to keep other drivers from transmitting on their frequencies, and to eliminate any interference they might receive. You can monitor them without a CTCSS capable scanner just fine.

On what frequency does Mobil's Speedpass operate? Every time I pull up to a Mobil-enabled pump my radio gets a loud rhythmic noise (I'm usually listening to the local AM news station around 900... doesn't have nearly as much interference on FM stations). Just what is radiating, and why?

Ummm sorry to bring this to your attention but just tune to 3.95mhz on a Saturday night and tell me how HAM's are better than CB'ers!?!
Most people who use CB radio don't know the difference between a varactor and a cow.
Those who do know the difference, are HAM's and from what I've heard, myself, are pretty trashy
and low class on the HAM bands too.
By the sound of it, the lower in frequency you go, the more trashy HAM's get, with the sweet spot at
80m.

3555. TELEVISION NEWS PROGRAM ABOUT CORDLESS PHONES

Newsgroup: rec.radio.scanner
Date: 1999-06-02 00:00:00 UTC
From: OBI-WAN PEROGI <theoldbrookltnkid@ameritech.net>
Message-ID: <3755EBAB.A91@ameritech.net>
Source record: 116608
Cross-posted to: alt.radio.family,rec.radio.scanner,alt.radio.scanner,aus.radio.scanner,alt.radio.scanner.uk,soc.penpals

I was just wondering if anybody seen the news program about cordless phones. They mentioned some guy with a scanner was getting info on his neighbors and tapping into their voice mail boxes. No where did they mention the good that scanner people do. Very one sided. Very sensational type of newscast. What about Skywarn/Canwarn, helping police? What about listening to the Space Shuttle? Very porrly done.

Here's my marine bank.

Within the US, the most active marine channels are 16 (hailing/distress), 22 (USCG). Also 68 and 70 are popular for chatting off the hailing freq.

Ignore my channel numbers on the left hand edge - they are for my scanner.

BANK f Marine Radio, US Coast Guard, NFM unless noted

3557. SS tubing/Discone ... Materials/Noisy antenna

Newsgroup: rec.radio.scanner
Date: 1999-06-02 00:00:00 UTC
From: Jim <jvpoll@dallas.net>
Message-ID: <3755E9BC.9F4FA7A9@dallas.net>
Source record: 116610
Cross-posted to: rec.radio.amateur.antenna,rec.radio.scanner

There might be one more factor to consider ...

If the materials are too far apart in the galvanic
series (Aluminum and Zinc are neighbors) the
materials will A) corrode (of course) and B) will
be noisy if used in full duplex mode.

I fought an Aluminun - steel connection for a week until
I changed antennas - then no more broadband white
noise when the transmitter was on the air ...

The repeater was 'quiet' into a dummy load - but I just
could not believe it was the antenna ...

I just finished watching the 20/20 report. They demonstrated how easy it is to intercept cordless phones. They interviewed a man that had been convicted of intercepting telephone communications.
I think someone should pass a law that makes it illegal to broadcast information about yourself and your family all over the neighborhood.

header1Yes it is illegal. It is a violation of the Electronic Communication Privacy Act to monitor any type of private telephone call.

BTW, please don't post to the newsgroup in html format.

True for you in the US. BUT it's all legal here in Canada...just thought I
would point this out as the original post was from Toronto, Canada.

>
> Jon
First and foremost you will needto know what type of Trunking Sytem it
is--
Ericson, Motorola, Johnson? If it is a Motorola system; then you are in
luck, if not then you will have to buy a device from Optocomm. It hooks
up your computer. Your scanner will only work with a Motorola system.
If it is an Ericcson system then you will have to wait to the end of the
year for that scanner which will scan Motorla and Erriccson. If it is
any other system you are out of luck. Some systems will link one type
of trunked system with another and that way you can hear both systems.
After you figure that out and it is Motorola you will need frequencies.
Once you find ouit the frequencies from Police Call, or ameerican
Scannergram, or on your own then pick a bank in your scanner to program
them into.
First press Trunk and hold it until Trunk Bank andd all the numbers on
top start flashing; then choose one bank for the frequencies. Press
that number. This will stop it from flashing. now porgram in the
frequencies like you normally would. Once you are done press search.
This will make the scanner search for the control frequency. Once it
finds it; it will display a small little bar on top with the word trunk,
five bars in the middle and the word search abbbreviated as the word
srch on the bottom. The numbers that flash were the bars in the middle
are will be the talk groups. Pres enter to enter the talkgroups into
your scanner when they light up. Your scanenr will only hold fifty talk
groups divided into 5 groups of 10. These talkgroup banks work just
like the frequency banks on coventional scanners. You can delete
talkgroups put new ones in their place, lock them out, unlock them, scan
them. Of course if you already know what the talkgroups are then just
puit your scanner into search mode once you program in all the
frequencies. Then when you see the bars,etc; yuo can program them just
like you would a frequency. Remember though; Type Two talkgroups are
even numbered talk groups: 16,32,48,64,etc. Type One talk groups will
show up as even and uneven numbers: 16, 33, 41, 42, 52, 61, etc. With
Type One Talk groups you have to program in the fleet map. Without the
fleet map you might no be able to follow the whole conversation . You

cannot just program in any fleet map but the correct one.
Type One Talk groups will lok like this:
xxx-x or xxx-xx
While Type Two talk groups will look like this:
16, 32, 48, 64, etc.
Of course the fun is if you have a Hybird system. That is a combination
of Type One and Type Two.
If it is digital forget it. You will not be able to hear anything. You
can of course program in the frequencieas and as long as the digital
system is not encrypted then you will still see the talk groups light
up. Good luck in figuring out which talk group goes with which service
in this case.

header1Yes it is illegal. It is a violation of the Electronic
Communication
Privacy Act to monitor any type of private telephone call.

Scanner buff for 10 years, I think am aware the laws (Canada, Us)
and i agree with u. Canada not illegal listen to Cell phones, Cordless
phones
as long don't disclose the information to others.

40-41-42 Elizabeth II Capter 40 - (Bill C-109) Canadian law.

184.5 (1)
Every person who intercepts, by means of any electro-magnetic, acoustic,
mechanical or other device, maliciously or for gain, a radio-based
telephone
communication, if the originator of the communication or the person
intended by the originator of the communication to receive it is in
Canada, is guilty of an indictable offence and liable to imprisonment
for the a term not exceeding five years.

193.1 (1)
Every person who wilfully uses or discloses a radio-based telephone
communications or who willfully discloses the existence of such a
communications is gulty of an indictable offence and liable to
imprisonment for a term not exceeding
two years.

BTW, please don't post to the newsgroup in html format.

Here is how you be findin the lojack freq. get a scout freq counter ,
rob the bank, and if you dont get shot in the head by a marksman guard
who is really tired of shooting at steel and paper targets then use
the coounter to find the freq then you can tell all the guys in prison
just before they beat you to a pulp and rape you what the nifty Lojack
freqs are!!

>
>>>> > Don't happen to know freq for hidden bank

Hello,
Volusia County has a GE / Ericsson EDACS system and your PRO 90 will not track it. Supposedly the new BC245 T2 has this capability and it should be available this summer.
I hope this helps,
Bret

Yep. It's an odd combo, theres like 2 AA's and one 1/2 of an AA. Of
course they aren't really AA's but it's the same size and voltage. IIRC
the number is BP3000A or BP300A. It's a Sanyo pack. Some of the packs
actually have the tag on it but mine ripped when I pulled it out (it's
glued in).

From: Gary B <GARBRE@sisna.com>
Message-ID: <375548b8@news.sisna.com>
Source record: 116649

The 2 primary differences are that the r-11 is cell blocked (woopee!) but the r-11 does display the range in which the frequency is originating (i.e. 150-180 mHz). The r-10 only hears the nearfield transmitter, there's no frequency display of any kind. But of course it is cell capable so that makes it immediately worth big bucks for some reason...;-)

Ok...could someone please explain to me what trunking is and how it works? I have a BC235XLT and just read in my local paper that the Sheriff department, which I listen to often, is going to a new trunking system. I know my scanner has the trunking capabilities, but am at a loss on how it works or how to use it. The instructions that came with are not very clear. Can anyone out there help a newer listener like myself? Thanks!

Packet cluster? Hmm. I've heard that some smaller police departments
use amateur radio Terminal Node Controllers (TNC) for a dirt cheap MDT
substitute. This is a 1200 baud signal on Bell 202 modems running
AX.25 protocol. Try it. I'll bet that's what they're talking about.

UHF Television starts at 470 and goes to about 820mhz this is channels 14-69
used to be 14-83 each channel is 6mhz wide with audio being at the top end
example 470-476 audio is at 475.75 use this formula and you can calculate the
audio for any other UHF TV channel in the USA

Here is a place that been around for a while, although I don't have any personal connection, nor have I done business with them. http://members.aol.com/~primecell/primecell.html. I have also added part of a past posting from Bob Parnass that would give you other options. http://members.aol.com/~primecell/primecell.html

How about someone creating a Bill Cheeks NewsGroup. That way we don't have to download hundreds of useless posts. I don't know Bill, don't want to know Bill, and don't want to know anything about bill. I do want to read about scanners here. This Bill thing is getting old..... or maybe I am. I just can't believe that so many people can get so upset by this guy... I'm not for or against Bill, I'm just tired of seeing so much of the NG being taken up by this topic. Man I hope this ends soon....

>radio.
>It is very unfortunate.

No Jim, elitist, or no other ATTITUDE will ever be the death of Ham radio. Filling it's ranks with a bunch of FOUL MOUTHED CB'ers would be it's CERTAIN DEATH! If you or anyone else can't qualify for a ham license, don't expect the whole world to change it's rules to make it EASY for you. CB RADIO is the best argument of why MORSE CODE should REMAIN a requirement for a HIGHER LEVEL Ham license. After all, the FCC already practically GIVES AWAY the NO-CODE Technician 'LICENSE'. Don't you know that the reason a Ham License has to be EARNED, is to make sure the person OPERATING it knows what he/she is doing? Once again, look at CB radio. This is one of the few SERVICES where a license is not required, and the results of this are very easy to see. HAM OPERATORS don't want THEIR service turned into another CB WASTELAND. Morse Code is still required by international agreement for Amateur Radio stations transmitting below 30 Mhz. You cannot, and I cannot (and would not) change this. Those that will not put forth the small amount of effort required to qualify for a Ham license, can pout. or languish in their CB HOME until THIER attitude changes! Happy CBing...

Hi all:

I just signed on this NG. I belong to a few, so I know how they work.

We have property in N.E. Michigan, just a few miles from Lake Huron. Is there a WEB site or book or something that I can look up frequencies used by freighters on the Great Lakes?

Thanks for your help

OBI-WAN PEROGI <theoldbrookltnkid@ameritech.net> wrote:

>...Morse Code.

In reference to what would be the 'DEATH OF HAM RADIO'. No, Morse Code will never be the DEATH of this service. Amateur Radio has been around for right at 70 years, and until recently, ALL classes of Ham license required the 'dreaded' Morse Code. A few years ago, the FCC, being sick and tired of all the WHINING, mostly from CBers, came up with the NO-CODE Technician (Wife's) license. (FLAME SHIELDS ARE UP)...Now this is ok, but any farther reduction in requirements, and Ham licenses might as well be put into CRACKER-JACKS boxes! Ham Radio has SERVIVED all these years WITH Morse Code, (and in my opinion, BECAUSE of Morse Code), and it can continue to survive with it. So CBers, cry your eyes out, and when you get tired enough of, 'BREAKER BREAKER GOOD BUDDY', get you a Ham License the OLD FASHIONED way. EARN IT! .... Joey!!!!!!!!!

Body handling: HTML body converted to readable text

On 01 Jun 1999 19:04:58 PDT, tool , whilst taking time out from picking fluf from his belly button, and befor picking his nose, sat down, pondered on why he sat down, stood up to scratched his ass in vain hope of stirring his two brain cells into action, decided to issue forth with the sum total of his irradiate wisdom and knowledge and did present the atypical yank psyche to the world when he penned:

>You dumb stupid fuck!!!!!!

Another dumb yank who has the arrogance to think he is an intelligent one!

>
>You dumb stupid fuck!!!!!!
>

But not intelligent enough to know that html should not be posted in an ascii based group!

Thank goodness we let 'em win the war of independance!

>
>You dumb stupid fuck!!!!!!
>

[]

(Hey Yank, try the following hats on and throw away the one that doesn't fit!)

People would follow him anywhere, but only out of morbid curiosity.

He is really not so much of a has-been, but more of a definite won't-be.

When he opens his mouth, it seems that it is only to change feet.

He would be out of his depth in a parking lot puddle.

He has delusion of adequacy.

I bet he sets low personal standards and then consistently fails to achieve them.

He is depriving a village somewhere of an idiot.

He would argue with a signpost.

He has a knack for making strangers immediately.

He brings a lot of joy whenever he leaves the room.

When his IQ reaches 50, he should sell.

If he were any more stupid, he'd have to be watered twice a week.

If you give him a penny for his thoughts, you'd get change.

If you stand close enough to comicus@usa.net, you can hear the oceans

It's hard to believe that he beat out 20,000,000 other sperm.

Some drink from the fountain of knowledge; he only gargled.

Takes him 2 hours to watch 60 minutes.

(Failed... 'cos you cant extract urine from excreta!)

With sincere apologies ALL other yanks - some of which I am proud to call my friends.

3639. PRO-2035 Tips

Newsgroup: rec.radio.scanner
Date: 1999-06-02 00:00:00 UTC
From: av8tor@flash.net
Message-ID: <a9%43.631$b41.1087@news.flash.net>
Source record: 116711

Hello All:
I have a PRO-2035 Scanner and would like to know if there are any radio shops which can "tighten" up the selectivity of this scanner. While scanning the VHF Marine range (which is 50% of my monitoring) I get pagers and all kinds of crap in-between channels. Also, the sensitivity isn't as good as the good ole PRO-2006.

Side by side comparisons both the PRO-26 and PRO-2006 scanners both provide better selectivity and sensitivity.

George

I have 2 MX-Com voice scrambling boards. They are model MX P1087.1
These boards were removed from 2-way radios and will scramble received
and transmitted audio.

These boards encode the audio so it sounds like 2 ducks talking to
each other. I also have and will included the data sheets for
reinstallation.

$ 100.00 for the pair including Priority Mail shipping to the lower 48
states.

Please reply via e-mail.

I dunno about Germany, but the term "Hertz" was not used in place of
megacycles/second until well after WW II.

this is very very low.

says something about the
purveyor of words
in this thread coming
forth....a putrid
smack in the eye.

we have the right to publish and
to be egotistical or no. since
when does the fuckin government assembled
in their little porticos have the right
to act as GOD.

seems that what is occurring is that
we are beginning to see that KING Bill and
Queen Hillarity are helping government
agencies take us back to the days of
the Inquisition or earlier.

Every one listen up, the KING and
Queen speak: you listen and if you
disagree, off with your head.

Rights we took for granted are being
eroded in the name of "appropriateness"
...a new socialistic way of taking away
and giving all back to the "in power"

Look at what the elected dolts are
proposing: Guns. You buy and gun. you shoot
a people. you go to jail. And they sue
the maker for making the gun.

What about a kitchen KNIFE. same innuendo.
where do you draw the line.

remember: showing masturbation on tv is
inappropriate and jailable to those that
air it and those that perform it and
those that sell it and those that just
enjoy watching it. or child porno: you
pick up a mag and there are little
kids naked in frolic joy and you
get jailed. why? All you did was
LOOK.

in bill's case: well, he was too egotistical.

On JULY fourth...stay home. it's passed you
b by.

Source record: 116720

dana-
You could search the room archives to find threads on this subject, the "trick" for hearing images of cell's on the 9000 have been posted here quite a few times.
Basically, you set the scanner to search the area between 300 MHz and 500 MHz. The default settings here (I believe) are AM mode and 12.5 kHz step. Simply change the mode to NFM, and the step size to 5 kHz. Then search. It's very easy, nothing involved as regards physical modification. Just a keyboard trick, and your mileage may vary.
I will agree with Bob, however, that cell-call monitoring, besides being (unenforceably) illegal, is about as interesting as watching paint dry. Just my opinion, but there are FAR more interesting comms to listen to than cell's.
Anyway, have fun, be safe, stay cool-
Mike

Here's some info from the web...

http://www.knls.org/webfile/DXDEF1.HTML#Hertz

The term cycles was changed to Hertz, in the 1970's in honor of Heinrich
Hertz, a German scientist who first discovered radio waves in 1887.
Older radio receivers and books may still use the term kilocycles and
megacycles, abbreviated kc and mc, but today kiloHertz and megaHertz are
abbreviated k, capital H, z, and m, capital H, z.

and...

http://www.electronics2000.com/radio/

Radio signals are composed of many repeating waves of electromagnetic
energy. The waves of the frequency is so high, that they have to be
expressed in kilocycles (thousands of cycles) or megacycles (millions of

cycles) per second! About 20 years ago it was decided to substitute Hertz (Hz) for "cycles per second", thereby honoring Heinrich Hertz, a 19th century physicist who pioneered the study of radio waves.

Perhaps Hertz units were used in Germany pre-WWII? This is worth
investigating.

Ok. I now have the answer and it seems my claim that the Nazis prohibited the use of the term "Hertz" is quite explicable because that term WAS in use in Germany for some time before WWII.

The Oxford English Dictionary (the complete version) gives historical uses of the term Hertz. Pre-war uses are noted as follows:

1928 BBC Handbook: "Hertz - a term sometimes used to designate frequency..."

1934 Electrical Engineering (US) LIII "It was proposed by the Italian committee that the term Hertz be given to the unit of frequency...THE HERTZ IS USED ALMOST EXCLUSIVELY IN GERMAN TECHNICAL LITERATURE"

Hello,
I'm from Indonesia
I have an ICOM R-100 for sale
Excellent condition (95 %)
* Dimensions: 5.9 (W), 2.0 (H), 7.1 (D), 3.1 lb
* 100 kHz - 1856 MHz (Full Unblocked)
* AM, FM, WFM
* Mobile
* 100 Memories
* 20 Scan Edge Memories
* RF Attenuator (20 dB)
* Preamp (15 dB)
* 24 Hour Clock
* AFC
* Auto Noise Limiter
* Keyboard Entry

With box, manual, car mounting, power supply cord, cigarette lighter
cord
Sorry, antenna is not included (I've lost the original whhip antenna
and
the wire antenna)

Cash or trade with Icom IC-735 + Ext. HF Tuner or Yaesu FT 757 GX II +
Ext.
HF Tuner
Please send me your quotation to hongky@altavista.n

My 7100 worked like a charm for 5 years.

For a beginner go for the last of the new ones.

I still have the 7100 light mod available if one wants to email me.

My new 9000M3 works even better all round.

I have no pager breakthrough in NZ, but a lot of stuff below 30 MHz
can now be heard on a good aerial.

> as say Donald Trump in his $$$ aircraft?

Yep, totally egalitarian. Of course, Joe Blow might have a little more of
a problem coming up with the bucks for the installation.

> I know that cell phones are not permitted on-board a commercial aircraft
> - is the same true for private aircraft?

The FCC and the service providers get very uptight if you transmit from
altitude. The cell system assumes everyone is close to the ground and
depends on signal strength to determine what cell you're in. Transmitting
from 10,000 ft confuses the central computer and can screw up the channel
for a half dozen different cells.

> (2) Are the 800 mhz ground stations for commercial phone traffic (ie:
> GTE Airfone) duplex or simplex on their signal retransmission? Also, on
> 800 mhz, is there still the annoying carrier that the 400 mhz is
> supposed to carry?

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Air to Ground Telephone [22.521]

Ch Ground Airborne

Signaling 454.675 (459.675)
6 454.700 459.700
7 454.725 459.725
5 454.750 459.750
8 454.775 459.775
4 454.800 459.800
9 454.825 459.825
3 454.850 459.850
10 454.875 459.875
2 454.900 459.900
11 454.925 459.925
1 454.950 459.950
12 454.975 459.975

Transmissions are FM. Ground stations repeat the airborne
half of the conversation, and transmit a continuous tone when

idle. From one to four channels are assigned in a particular
area.
Service is used on private aircraft.

800 MHz Air to Ground Telephone [22.1107]

- - Airborne - -
Blk Ch 1 - Ch 29

10 894.0055 - 894.1735
9 894.2055 - 894.3735
8 894.4055 - 894.5735 Guard Band -
7 894.6055 - 894.7735 .x765-.x797
6 894.8055 - 894.9735
5 895.0055 - 895.1735 Control Channels -
4 895.2055 - 895.3735 .x813-.x973
3 895.4055 - 895.5735
2 895.6055 - 895.7735
1 895.8055 - 895.9735

Transmissions are AM (or AM/SSB), and converting to digital.
Channels are spaced 6 kHz apart. A specific block of 29 channels
is assigned to each geographical area. Ground frequencies are 45
MHz lower and do not echo the airborne half of the conversation.
Service is used on passenger airlines.

Canoga Park is smack in the middle of the City of Los Angeles' San Fernando Valley. They get their police service from LAPD and fire/EMS from LA City Fire.

LAPD: North of Roscoe Blvd is in Devonshire Division ("17--" units), dispatch frequency is 506.8875.

South of Roscoe is West Valley Division ("10--" units), disptach frequency is
506.7125 (shared with Van Nuys Division #9).

For car-to-car they use either their dispatch freq in simplex mode, or Rover 5, 507.2626. Also, they're now using some "Astro" frequencies in the 482-band for tactical stuff.

##########

LA City Fire Dept: Valley Dispatch "OCD" is on Channel 8, 858.4375. Fireground in the Valley is usually on Channel 3, 859.7625

Canoga Park is mostly in LAFD Battalion 17, with fire stations 72, 73, 84, 93, 100, 105 & 106.

LAFD Rescue Ambulance resources in Canoga Park would be "RA's" 87, 93, 100, & 105, plus EMS 3 (supervisor) out of 100's

Note that LAFD has 24 800-band frequencies but does NOT use trunking. Everything is on conventional repeaters. Now isn't that nice. (Ask Brian Humphrey at LAFD Public Affairs how they managed to do THAT!

LAFD homepage is www.lafd.org and they list all their frequencies at http://www.lafd.org/freqncy.htm

LAPD is at www.lapdonline.org

OK...seems to me that you are right, but:

My scanner supports these frequencies (869 to 894) Here are the frequencies:

66 to 88 MHz
108 to 174 MHz
216 to 512 MHz
806 to 956 MHz

but it switches (depending on frequency) to FM or to AM automatically. I
would like to select the modes by myself..
me thinks the best solution is to sell this damn thing and buy a new Voodoo3
instead!

Dirk

>Regards, Jim. | Plus je vis d'�trangers, plus

You are correct, but it's still a lie. All the ITU says is that the operator
has to show knowledge of CW. It doesn't say what speed. It doesn't say how. It doesn't say different classes.

Technically, "a dash is three times as long as a dot" would be enough to satisfy the ITU requirement.

The first step is the elimination of the different speeds of CW. That's going to happen, whether the CW freaks howl or not. So ask yourself, what happens to the CW subbands when the requirement becomes a single speed? Think they'll stay the same? Maybe, for a short while. But I'll bet they 'shrink' a little. Then more, then more.

All this CW / anti-CW argument is doing is fostering an us vs. them attitude, and the result is that when the CW requirements lighten up, then fade away, so will the subbands. And without a subband to protect it, new operators will fall off.

There will always be diehard CW freaks. There are a number of areas where CW is the only way to go. (And no, I'm not going to use that really
lame and BS argument of 'what if someone is in an accident and their mic is broken?' line. Hey, if frogs had wings, they wouldn't bang their ass on the ground when they hop either!) But without the 'fun' areas for
CW, it will begin a downward slide.

What's the answer? I sure don't know. But I DO feel that the surest way to accelerate the slide is to bicker and post BS arguments on CW being 'required' with implications that don't match facts. Or to state it is
a 'twit filter'. Or that it's required for those times you car runs off the road
and you only have CW to get through.

I've been thinking about getting one just to keep around for when I don't feel like lugging around a bigger unit. For those who have or tried it, how is the reception on it. From the pics it looks like you get a stubby VHF antenna. I already read the review on StrongSignals.net, and it really cought my eye.
How does the sensitivity compare with say...a new uniden portable with the factory duck antenna?
I just want something to compare it to to make my decision.

Thanks,
Shaun Whitman

typical bloody media, thick as poop !, since when can you "tap" into a
voicemail system with a damm scanner ?. listen to it perhaps but impossible
to "use" it

usual story

gov, backed mis-information to get rid of scanners...

**ck 'em

Wouldn't that depend on the reason he's listening? I beleive some people
use such things as information sources, not as forms of entertainment.

I believe there is a clear miscommunication going on here, brought
upon by the mechanics of USENET.

I believe Donna came upon these posts in rec.travel.air, where
the majority of people are NOT in the group to learn how to use
scanners, but to discuss air travel.

You obviously came upon these posts in rec.radio.scanner, where that
IS the focus of conversation.

This is a side-effect of cross posting. Different groups of people
come to the same message from entirely different angles.

I have a Motorola Maxtrac 900Mhz High Power Unit. This radio covers 1 conventional channel, 8 trunked fleets with 7 subfleets each. I think it is the 35 watt model. If you aren't interested in buying, could you at least tell me what it is worth. It has a mic and a power cable but no mounting bracket. Thanks!

What the hell do you think we own scanners for? Sure, I agree anything like
this is a tragedy, but that doesn't make us morbid.
It's a hobby we enjoy, be it good or bad things we hear.
Personally, I'd rather hear it first hand before the media twists the hell
out of it.

Howdy! Got some items for sale, always looking to trade, too, especially for some 6 m SSB gear...

1. Standard C156a 2m HT. See a photo and specs at:
http://www.stdradio.com/hanheld.html#156
Good condition with manual and AA battery pack, $75 + 5 to ship USPS 3-day.

2. Baycom BP-2 Multimode modem. Photo and specs at:
http://www.tigertronics.com/bp2info.htm
With manual and packet cable for the above radio and I believe it will fit Radio Shack and
some Icom radios too. $30 + $5 to ship USPS

3. Toshiba 2000x 386 Laptop- B&W screen, 1 MB ram (expandable) 40 MB hd. Not a Cray, but
worked well for DOS packet and logging programs. With power supply.
$25 + $10 to ship (heavy)

4. Bearcat BC 140. 10 channel scanner (some were expandable to 16 channel) VHF lo/hi UHF.
Scanner only for $15 + $5 to ship 3-day priority. Have too many scanners!

Take some or all! Or let me know what you have to trade (think 6m SSB!) All items will be shipped upon receipt of money order the same day well packed...

>information. I can't
>tell you how far off the reporting is from what actually happened.

I cover breaking news with my ENG.

I'm a pro and that is that.

But what you say is so true. I cover with
video and get interviews about what has
been occurring since I arrived.

when I see the story on the wires or in the
newspaper or a reporter on tv reads it, I
am afghasted....I cannot believe I was there
based on what was reported.

And I alert the newspapers and tv stations
to this untruth and if it's not over for that
incident they then call the authorities
and get the real story.

One news agency has a WWW site...they ran a
story I covered and did interveiws. When I
saw what they put on their AIRING sum-up
on their BREAKING LOCAL NEWS menu...it just
was not true.

Next time I looked they had corrected it.

And they get their news reports from wire
services they pay dearly for.

News is not true if you just get it from
wire service reports. They pay these reporters

50K or more and they cannot get the facts right
due to no one wants to call the agencies up to
get the facts straight relying instead on the
wires.

...college students work at wire services putting
themselves through school. Journalism school.

oxymoron time.

bill conduit

in
>the situation.
>
so the PRESS people are sick people who listen
to scanners for all sorts of stuff going
down daily. It's not a violation of privacy.
It's in the public interest to know what occurred.
where it occurred and why?

privacy only portends to when you are in your
house or behind closed doors in a private club
or others house or your place of business...

what is on the sidewalk or street is
public view and any thing video or still
taken is legal. you are in public view.

privacy is violated when cities put up criminal
catching tv cam's at each corner and watch YOU
from above...then do with that video what pleases
them just in case they see someone who is not working
and is just slumming...

grow up.

>From what I read, the other poster's point was that rather than
standing
>there and gawking, you either find a way to help, or get out of the
way, and
>give survivors and victim's families some privacy to work through the
shock

>and grief involved.
>
this is another good point: if you go to gawk,
stay away. That's what the police are there
for. Gawkering with a scanner in hand is harmless
voyerism...it harms no one.

but at a distance. at a crime scene and or accident
scene you are required by law to get back from the
activity of all emergency personnel. Period.

That is why cops have whistles and guns and clubs.

and the threat of arrest will do it every time.

>I have to let you off easy to some degree though - I'd say you learned
well
>from the media sharks. They set quite an example.
>
Media Sharks are doing their job. That is
what they do. It's a job. It's a life where
you follow events for which a story will
be written. Public right to know.

It happens on streets or sidewalks or
any public-view area, it's news. That
is how things get corrected.

the media gets it, people reach to it,
and changes are made.

Without the press you have dictatorship.

Someone does not get back when cop
says to and givesthe cop the finger,
cop uses his finger and pulls the
trigger. Is this what you enjoy????

>As for the purpose of this newsgroup, we're here to learn and share,
not
>chase ambulances.
>
actually no one chases them.
They go code 3 and to do that you get
a ticket for harassing or following
an emergency vehicle...unless you
are the PRESS.
we have our perks.

I usually get there most times
sometimes prior to ambulance
gets there. or when they do.

I think that, no I know that, you got that in reverse. Please put that
post in forward.

You couldn't give me all the money in the world to drive a freaking
Mercedes. All those owners should eat their imported cars when they get
hungry

How do you use your penis?

every one has one, so tell
us how YOU use it?

we need to learn. We need
to share.

all of us have one...so let
us share. you see, women
have them also.

scanning: we all have our
uses for them.

different strokes for different
folks. that can be true for
having a penis also.

plus it's always nice knowing
what is going on where you live.

why there are sixteen police
cars down the block and you cannot
get out...for your safety.

no one can get in too...so
you need to know why your
delivery of "oxygen" did not
get through.

then write a letter
explaining why you are
dead...no electric or
phone either.

your scanner is on batteries.
